

FEATURES

- -55°C to +85°C operation
- 10 to 16 VDC input or
16 to 36 VDC input typical
- Fully isolated
- Opto-coupler feedback
- Fixed frequency 125 kHz typical
- Topology – Push-Pull Forward
- Transient protection
50 V for up to 50 ms 28 Vin models
- Inhibit function
- Indefinite short circuit protection
- Trimmable output on single models
- Up to 83% efficiency

DC/DC CONVERTERS 12 AND 28 VOLT INPUT

MHE SERIES 20 WATT

MODELS

5	±12
12	±15
15	

Size (max.): Non-flanged 2.125 x 1.125 x 0.495 (case H6) inches
(53.98 x 28.58 x 12.57 mm)

Flanged 2.910 x 1.125 x 0.495 (case K7) inches
(73.91 x 28.58 x 12.57 mm)

See Section B8, cases H6 and K7, for dimensions.

Weight: 50 grams typical

Screening: Standard or ES. See Section C2 for screening options, see Section A5 for ordering information.

DESCRIPTION

The MHE Series™ DC/DC converters offer the high efficiencies associated with switching regulators, yet have full isolation and the excellent regulation typical of linear regulators. No external components are required for operation. MHE Series converters are built using thick-film hybrid technology, and are sealed in metal packages for military, aerospace, and other high-reliability applications. Unscreened models are solder sealed and are guaranteed to pass a gross leak test (maximum leak rate of 1×10^{-3} atm.-cc/sec). Environmentally screened models are hermetically sealed and are screened as described in Section C2.

The MHE Series converters are pulse-width modulated switching regulators operating in the forward mode, with a nominal switching frequency of 125 to 140 kHz. Isolation is achieved through the use of a transformer in the forward power circuit, and an optocoupler is used in the feedback/control loop. The full load output power is available over the full input voltage range. Short-term transients of 50 volts will not impair normal operation for 28 volt input models.

The efficiency is typically greater than 80% over the entire input voltage range and from approximately 25% of full load to full load. This feature makes the MHE Series converters ideal for either battery or aircraft power applications.

An inhibit function is provided on MHE Series converters to allow power shutdown and startup from a logic input. The unit is inhibited when the inhibit input pin (pin 2) is connected to the input common (pin 10). The open circuit voltage of the inhibit pin is 8 to 10 VDC for 12 V input models or 11 to 13 VDC for 28 V input models. During inhibit, the input inhibit pin must sink approximately 1 mA. In the inhibit mode, converter output drops to less than 1 V and the input current is typically 8 mA.

Automatic current limiting circuitry protects the MHE Series converters against short circuits.

MHE Series converters are rated to operate at full load up to a case temperature of 85°C, with the output power derated linearly to zero at 115°C. Because of the unit's high efficiency, heat sinking requirements are minimized, but due consideration should be given to removing self-generated heat when operating the device at maximum ratings. To increase dissipation, heat conducting material (PCB, copper sheet, heat sink, etc.) should be brought into contact with the converter's baseplate.

When the MHE Series converters are used in applications requiring full power operation for extended periods of time, or in shock and vibration environments, it is highly recommended that the flange-mount option be used. This option provides improved thermal transfer capabilities as well as a mechanically secure mounting configuration.

MHE SERIES

20 WATT

DC/DC CONVERTERS

ABSOLUTE MAXIMUM RATINGS

- Output Power**
- 10 to 20 watts depending on model
- Lead Soldering Temperature (10 sec per lead)**
- 300°C
- Storage Temperature Range (Case)**
- 55°C to +125°C

INHIBIT

- Inhibit TTL Open Collector**
- Logic low (output disabled)
Logic low voltage ≤ 0.8 V
 - Referenced to input common
 - Logic high (output enabled)
Open collector

TYPICAL CHARACTERISTICS

- Output Voltage Temperature Coefficient**
- 150 ppm/°C, typical
- Input to Output Capacitance**
- 60 pF, typical
- Current Limit**
- 125% of full load, typical
- Isolation**
- 100 megohm minimum at 500 V
- Conversion Frequency**
- 125 kHz, typical
- Inhibit Pin Voltage (unit enabled)**
- 11 to 13 V MHE28XXX
 - 8 to 10 V MHE12XXX

RECOMMENDED OPERATING CONDITIONS

- Input Voltage Range**
- Continuous
- 17 to 40 VDC MHE28XXX
 - 10 to 16 VDC MHE12XXX
- Transient
- 50 V for 50 msec on 28 V input models
- Case Operating Temperature (Tc)**
- 55°C to +85°C full power
- Derating Output Power/Current**
- Linearly from 100% at 85°C to 0% at 115° C
 - MHE28XXX models derate by 33% at 16 Vin

Electrical Characteristics: 25°C Tc, 28 VDC Vin, 100% load, unless otherwise specified.

Note

1. Guaranteed by design, not tested.
2. On dual output models at least 25% of the load should be on the positive output.

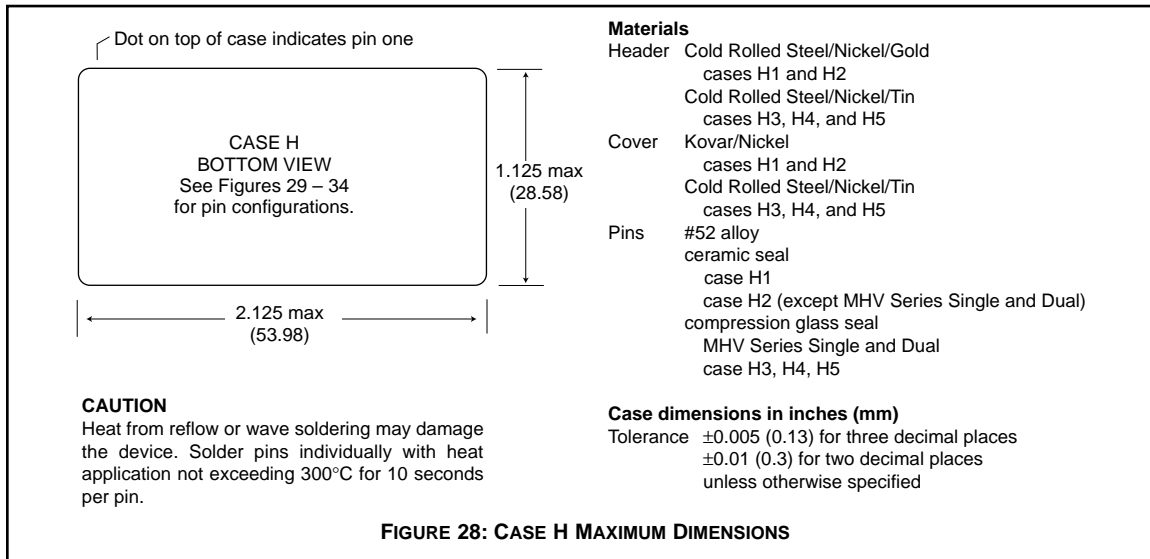

**OUTPUT ADJUSTMENT RESISTOR VALUES
FOR MHE2805S AND MLP2805S**

Resistance Pin 3 to 4	Output Voltage Increase (%)
∞	0
390K	+1%
145K	+2%
63K	+3%
22K	+4%
0	+5%

Output Adjustment all single output models:
The output can be adjusted upward by using the output adjust (pin3). The resistance between output adjust (pin 3) and output common (pin 4) will determine the magnitude of the increase in the output. **The table above is applicable only to MHE2805S.**
