

EJH Series

UL Recognized
CSA Certified
VDE Approved*

EJH Series

The new EJH series is the next generation of medical power inlet filters. The 1-15 amp versions are flange mounted and mechanically equivalent to the EAH/EBH series. The performance has been enhanced to meet the needs for more attenuation. The EJH also has an extended metal flange around the socket for improved high frequency EMI shielding as well as a larger contact area for the panel ground. These medical filters are designed to provide common and differential mode performance while maintaining the UL leakage requirements for medical and dental equipment.

The EJH series also includes a 20 amp version that uses the inlet IEC 320/C20. This product was designed to keep up with the demand for higher current equipment. Applications include higher current power supplies and computing equipment, which consist of work stations, base stations, servers, etc.

Additional information on UL544 specification is listed in Appendix C.

Note: When using the models with an IEC connector, remember that the leakage current of the companion line cord, GA400, is more significant than that of the filter - which may disqualify this line cord from use in patient care applications.

*15EJH - VDE rated at 10 amps, 250 VAC
20EJH - VDE rated at 16 amps, 250 VAC

Electrical Schematic

Resistor location for reference only.

Specifications

Maximum leakage current, each line-to-ground

@ 120 VAC 60 Hz:	2μA
@ 250 VAC 50 Hz:	5μA

Hipot rating (one minute):

line-to-ground	1500 VAC
line-to-line	1450 VDC

Operating frequency:

50/60 Hz

Rated voltage (max.):

250 VAC

Minimum insertion loss in dB:

Line-to-ground in 50 ohm circuit
