

FEATURES

- 0...1 to 0...15 psi
gage or differential
- High impedance bridge
- True surface mount miniature package
- Usable for wet/wet applications⁸

SERVICE

All media compatible with

port 1: - polyphthalamide
- silver-filled silicone
- silicon nitride

port 2: - polyphthalamide
- fluor-silicone
- silicon

Scale: 1 cm
1/2 inch

SPECIFICATIONS

Maximum ratings

Supply voltage	12 V
Temperature limits	
Storage	-55 to +100°C
Operating	-40 to +85°C
Lead temperature (10 sec. soldering)	260°C
Humidity limits	0...100 %RH
Vibration (0 to 2000 Hz) (qualification tested)	20 g sine
Mechanical shock (qualification tested)	50 g
Proof pressure ¹	
24PC0070DSMT	20 psi
24PC0350DSMT	20 psi
24PC1000DSMT	45 psi

ELECTRICAL CONNECTION

PRESSURE SENSOR CHARACTERISTICS

$V_s = 10.0 \pm 0.01 \text{ V}$, $t_{\text{amb}} = 20^\circ\text{C}$ (unless otherwise noted)

Listing	Order number	Operating pressure	Full-scale span ²		
			Min.	Typ.	Max.
24PC01SMT	24PC0070DSMT	0 - 1 psi (69 mbar)	30 mV	45 mV	60 mV
24PC05SMT	24PC0350DSMT	0 - 5 psi (345 mbar)	85 mV	115 mV	145 mV
24PC15SMT	24PC1000DSMT	0 - 15 psi (1034 mbar)	165 mV	225 mV	285 mV

COMMON PERFORMANCE CHARACTERISTICS

$V_s = 10.0 \pm 0.01 \text{ V}$, $t_{\text{amb}} = 25^\circ\text{C}$ (unless otherwise noted)

Characteristics	Min.	Typ.	Max.	Unit
Zero pressure offset	-30		+30	mV
Temperature effects (0 - 50°C) ⁴	Offset	±2.0		
	Span	-2000		ppm/°C
Temperature effects on bridge impedance ⁴		+2200		
Linearity (P2 > P1, BSL) ³		±0.25		% span
Repeatability and hysteresis ⁵		±0.15		
Long term stability ⁷		±0.5		
Input impedance	4.0	5.0	6.0	kΩ
Output impedance	4.0	5.0	6.0	
Response time ⁶			1.0	ms

Specification notes:

1. The maximum specified pressure which may be applied to the sensor without causing a permanent change in the output characteristics.
2. Span is the algebraic difference between the output voltage at full-scale pressure and the output at zero pressure. Span is ratiometric to the supply voltage.
3. Linearity (BSL), the deviation of measured output at constant temperature (25°C) from "Best Straight Line" determined by three points, offset pressure, full-scale pressure and half full-scale pressure.

$$\left[V_{\frac{1}{2} \text{ full scale}} - \left\{ \frac{V_{\text{full scale}} - V_{\text{offset}}}{(\text{full scale pressure})} \times (\frac{1}{2} \text{ full scale pressure}) + V_{\text{offset}} \right\} \right] : 2 (V_{\text{full scale}}) \times 100 \%$$

where: V = measured value for each device

4. Error band of the offset voltage, span or bridge impedance in the specified temperature range, relative to the 25°C reading.
5. Repeatability, the deviation in output readings for successive application of any given input pressure (all other conditions remaining constant). Hysteresis, the error defined by the deviation in output signal obtained when a specific pressure point is approached first with increasing pressure, then with decreasing pressure or vice versa (all other conditions remaining constant).
6. Response time for 0 to full-scale pressure step change, readings taken at 10 % and 90 % of full-scale pressure.
7. Long term stability of offset and span over a period over one year.
8. The sensors might be used on both ports, for media compatible with the components, specified under "Service" (page 1).
