

RoHS Compliant Product

Description

The SE2138 positive, linear regulators feature low quiescent current (45 μ A typ.) with low dropout voltage, making them ideal for battery applications. These rugged devices have both Thermal Shutdown and Current Fold-back to prevent device failure under the "Worst" of operating conditions. The SE2138 is stable with an output capacitance of 4.7 μ F or greater.

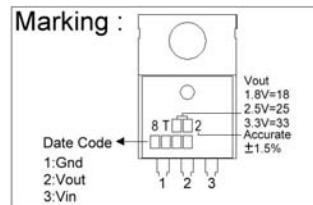

Features

- * Low Temperature Coefficient
- * Over-Temperature Shutdown
- * Very Low Dropout Voltage
- * High Accurate $\pm 1.5\%$
- * Short Circuit Current Fold-back
- * Guaranteed 1.5A output
- * Current Limiting

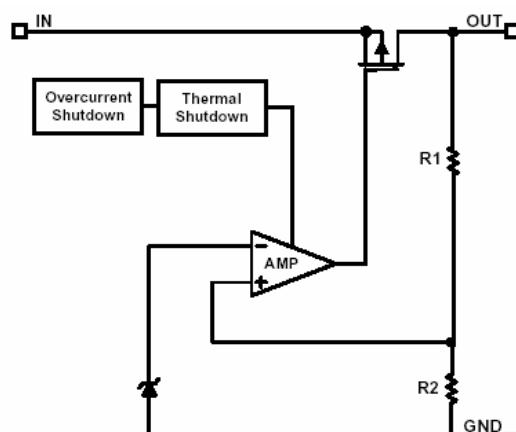

REF.	Millimeter		REF.	Millimeter	
	Min.	Max.		Min.	Max.
A	4.40	4.80	c1	1.25	1.45
b	0.76	1.00	b1	1.17	1.47
c	0.36	0.50	L	13.25	14.25
D	8.60	9.00	e	2.54	REF.
E	9.80	10.4	L1	2.60	2.89
L4	14.7	15.3	\emptyset	3.71	3.96
L5	6.20	6.60	A1	2.60	2.80

Applications

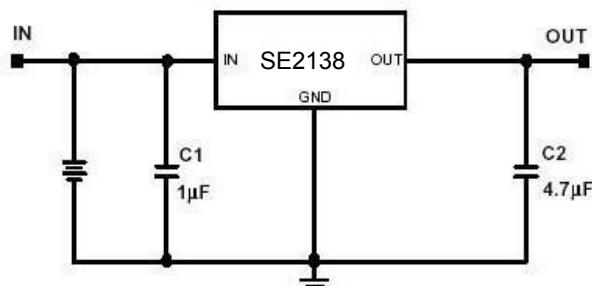

- * PC Peripherals
- * Wireless Devices
- * Portable Electronics
- * Battery Powered Widgets
- * Instrumentation

Over Temperature Shutdown	OTS			-	150	-	°C
Over Temperature Hysteresis	OTH			-	30	-	°C
Output Voltage Temperature Coefficient	T _C			-	30	-	ppm/°C
Short Circuit Current	I _{SC}	V _{IN} =V _{OUT} (T)+1V, V _{OUT} <0.4V		-	750	-	mA
Power Supply Rejection	PSRR	I _O =100mA C _O =4.7μF	f=100Hz	-	70	-	dB
			f=1kHz	-	50	-	
			f=10kHz	-	20	-	
Output Voltage Noise	e _N	f=10Hz~100kHz, I _O =10mA, C _O =4.7μF		-	30	-	μVrms

Note 1: V_{OUT}(E) =Effective Output Voltage (i.e. the output voltage when "V_{OUT}(T) + 2.0V" is provided at the V_{IN} pin while maintaining a certain I_{OUT} value).

2: V_{OUT}(T) =Specified Output Voltage

3: V_{IN} (MIN)=V_{OUT}+V_{DROPOUT}

Detailed Description

The SE2138 of COMS regulators contain a PMOS pass transistor, voltage reference, error amplifier, over-current protection and thermal shutdown. The P-channel pass transistor receives data from the error amplifier, over-current shutdown, and thermal protection circuits. During normal operation, the error amplifier compares the output voltage to a precision reference. Over-current and Thermal shutdown circuits become active when the junction temperature exceeds 150°C, or the current exceeds 2.2A. During thermal shutdown, the output voltage remains low. Normal operation is restored when the junction temperature drops below 120°C. The SE2138 behaves like a current source when the load reaches 2.2A. However, if the load impedance drops below 0.3Ω, the current drops back to 600mA to prevent excessive power dissipation. Normal operation is restored when the load resistance exceeds 0.75Ω.

External Capacitors

The SE2138 is stable with an output capacitance to ground of 4.7uF or greater. Ceramic capacitors have the lowest ESR, and will offer the best AC performance. Conversely, Aluminum Electrolytic capacitors exhibit the highest ESR, resulting in the poorest AC response. Unfortunately, large value ceramic capacitors are comparatively expensive. One option is to parallel a 0.1uF ceramic capacitor with a 10uF Aluminum Electrolytic. The benefit is low ESR, high capacitance, and low overall cost. A second capacitor is recommended between the input and ground to stabilize V_{IN}. The input capacitor should be at least 0.1uF to have a beneficial effect. All capacitors should be placed in closed proximity to the pins. A "Quiet" ground termination is desirable. This can be achieved with a "Star" connection.
