

NIMD6001

Dual N-Channel Driver with Diagnostic Output 60 V, 3 A, 110 mΩ

NIMD6001 is a dual 3 Amp low-side switch with an integrated common disable input and drain diagnostic output. Pulling the Disable pin low will override any applied gate voltages and turn off both FET switches. Should either Drain-Source voltage exceed approximately 50 V, a logic 1 (> 3 V) will be asserted on the Diagnostic/Feedback pin. Internal isolation diodes permit the Disable and Diagnostic/Feedback pins of multiple devices to be interconnected in a “wired-OR” configuration without additional components.

Features

- $R_{DS(on)}$ 110 mΩ Maximum at $V_{GS} = 10$ V
- Avalanche Energy Specified
- Gate Drive Disable Input
- Drain-Source Voltage Diagnostic Feedback Output
- Electrically Isolated Drains for Low Crosstalk
- Internal Resistors Limit Peak Transient gate Current
- AEC-Q101 Qualified
- This is a Pb-Free Device

Applications

- Automotive Injector Driver
- Solenoid / Relay Driver
