

Digital Panel Meters

Modular Indicator and Controller

Type UDM40

CARLO GAVAZZI

- The alarm status can be coupled to the different colour of the display
- Linearization of V and A inputs up to 16 points

Product Description

µp-based digital panel meter, 4-dgt LED indicator, for current, voltage, temperature and resistance measurements. Measuring ranges and functions easily programmable from the key-pad or from the PC by

means of optional UdmSoft software. UDM40 includes storage min-max functions and double level protection password. Housing for panel mounting with front protection degree: IP67, NEMA4x.

- Multi-input modular instrument 4 dgt LED
- 0.1% RDG basic accuracy
- TRMS AC current and voltage measurements
- AC/DC current measurements; selectable full scales (200µA to 5A)
- AC/DC voltage measurements; selectable full scales (200mV to 500V)
- °C or °F temperature measurements (Pt100-250-500-1000, Ni100, TC J-K-S-T-E)
- Resistance measurements; selectable full scales (20Ω to 20kΩ)
- Up to 4 independent alarm set-points (optional)
- 20mA/10VDC analog output (optional)
- Serial port RS485 or RS232 (optional)
- MODBUS, JBUS communication protocol
- Front protection degree: IP67, NEMA4x
- LED display, selectable colour (red, amber, green)

Wiring diagrams of optional modules (cont.)

BO SY: RS232 direct connection to PC by means of COM port. RS232 has no termination.

BO R4: dual relay output + dual open collector output: the load resistances (R_c) must be designed so that the close contact current is lower than 100mA; the VDC voltage must be lower than or equal to 30VDC.

VDC: power supply output

Vo+: positive output (open collector transistor).

GND: ground collector (open collector transistor).

BR SX: RS485 4-wire connection: additional devices provided with RS485 port (indicated as RS1,2,3...N) are connected in parallel. The termination of the serial port is carried out only on the last instrument of the network. The serial module is provided with a jumper for the termination of the RS485 network as shown in the figure above.

Note: particular types of cables or plants may require an external termination. For the network connections use twisted cable type AWG26.

Programming UDM40 by means of PC

UDM40 is programmable by PC by means of the UdmSoft software (available on request). The user can program all parameters of UDM40 that will be subsequently uploaded and set in the instrument by the RS485 network (BR SX). Should UDM40 be without the RS485 serial module, all programming parameters will be uploaded and set in the instrument by the RS232 auxiliary serial connection (1) located on the side of the measuring input module using the special connection cable (2) available on request, as shown in the figures on the left. It is also possible to program the instrument using the dot connector (1) by means of the HyperTerminal Windows functions of a PC.

Note: the RS232 auxiliary port IS NOT insulated from the measuring inputs.

Ordering code of the cable (2): UCOM1

Front panel description

- :
 - to program values;
 - to select functions;
 - to scroll display pages.
- : for special functions.

1. Key-pad

The programming of the configuration parameters and the display may be easily controlled by means of the 4 function keys.

: to enter the programming phase and to confirm the password.

2. Display

- Instantaneous measurements:
 - 4 digit (max display 9999).
- Alphanumeric indications by means of LED display for:
 - Display of configuration parameters;
 - The measured variable.

3. Alarm status LED

Display any alarm condition

4. Engineering unit

The instrument is supplied with a complete set of self-sticking labels with the main engineering units.
