

MSLU100 Series

1W, Miniature SMD, Single & Dual Output DC/DC Converters

Key Features

- Efficiency up to 80%
- 1500VDC Isolation
- MTBF > 2,000,000 Hours
- Low Cost
- Input 5, 12 and 24VDC
- Output 3.3, 5, 12, 15, 9, ± 5 , ± 12 and ± 15 VDC
- Temperature Performance -25°C to $+75^{\circ}\text{C}$
- UL 94V-0 Package Material
- Interanal SMD Construction

Minmax's MSLU100 1W DC/DC's are in "gull-wing" SMT package, weigh a mere 1.7 grams and meet IPC/JEDEC J-STD-020C 4th & 5th chapter in solder-reflow for lead free process.

The series consists of 24 models with input voltages of 5V, 12V and 24VDC which offers standard single output voltages of 3.3V, 5V, 9V, 12V, 15V, ± 5 V, ± 12 V and ± 15 VDC for the choice.

Their impressive guaranteed efficiencies enable all models to deliver their fully rated output power from -25°C to $+75^{\circ}\text{C}$ without heat sinking or forced-air cooling.

The MSLU100 series is an excellent selection for a wide variety of applications including data communication equipments, distributed power systems, telecommunication equipments and industrial robot systems.

The MSLU100 units are available in tape and reel package.

Absolute Maximum Ratings

Notes :

1. Specifications typical at $T_a = +25^\circ\text{C}$, resistive load, nominal input voltage, rated output current unless otherwise noted.
2. Ripple & Noise measurement bandwidth is 0-20 MHz.
3. These power converters require a minimum output loading to maintain specified regulation.
4. Operation under no-load conditions will not damage these modules; however, they may not meet all specifications listed.
5. All DC/DC converters should be externally fused at the front end for protection.
6. Other input and output voltage may be available, please contact factory.
7. Specifications subject to change without notice.
8. It is not recommended to use water-washing process on SMT units.

Test Configurations

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with an inductor L_{in} (4.7uH) and C_{in} (220uF, ESR < 1.0Ω at 100 KHz) to simulate source impedance.

Capacitor C_{in} , offsets possible battery impedance.

Current ripple is measured at the input terminals of the module, measurement bandwidth is 0–500 KHz.

Peak-to-Peak Output Noise Measurement Test

Use a C_{out} 0.33uF ceramic capacitor.

Scope measurement should be made by using a BNC socket, measurement bandwidth is 0–20 MHz. Position the load between 50 mm and 75 mm from the DC/DC Converter.

Design & Feature Considerations

Maximum Capacitive Load

The MSLU100 series has limitation of maximum connected capacitance at the output.

The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time.

For optimum performance we recommend 33uF maximum capacitive load.

The maximum capacitance can be found in the data sheet.

Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module.

In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup.

Capacitor mounted close to the power module helps ensure stability of the unit, it is recommended to use a good quality low Equivalent Series Resistance (ESR < 1.0Ω at 100 KHz) capacitor of a 2.2uF for the 5V input devices, a 1.0uF for the 12V input devices and a 0.47uF for the 24V input devices.

Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance.

To reduce output ripple, it is recommended to use 3.3uF capacitors at the output.

Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 90°C.

The derating curves are determined from measurements obtained in an experimental apparatus.
