

DESCRIPTION

The AMS2301 is the P-Channel logic enhancement mode power field effect transistor is produced using high cell density, DMOS trench technology.

This high density process is especially tailored to minimize on-state resistance.

These devices are particularly suited for low voltage application such as cellular phone and notebook computer power management and other batter powered circuits, and low in-line power loss are needed in a very small outline surface mount package.

PIN CONFIGURATION SOT-23

1. Gate 2. Source 3. Drain
