2.Handling Precaution

① Do not poke the silicone encapsulant with sharp object

② Hold the LED only by the body

③ Do not attach assembled PCB

④ Do not touch the silicone encapsulant

⑤ Clean the silicone surface with cotton bud with minimal pressure

⑥ Use pick and place nozzle per recommendation in datasheet

Recommended Soldering Conditions**1. Hand Solder**

Basic spec is 280 3 sec one time only.

2. Wave Solder**3. LEAD Reflow Solder****4. PB-Free Reflow Solder**

Note: 1.Wave solder and reflow soldering should not be made more than one time.
2.You can just only select one of the soldering conditions as above.

**Precautions For Use:****Storage time:**

- 1.The operation of Temperatures and RH are : 5 ~35 ,RH<60%.
- 2.Once the package is opened, the products should be used within a week.
Otherwise, they should be kept in a damp proof box with descanting agent.
Considering the tape life, we suggest our customers to use our products within a year(from production date).
- 3.If opened more than one week in an atmosphere 5 ~ 35 ,RH<60%,
they should be treated at 60 ±5 for 15hrs.

Drive Method:

LED is a current operated device, and therefore, requirer some kind of current limiting incorporated into the driver circuit. This current limiting typically takes the form of a current limiting resistor placed in series with the LED.

Consider worst case voltage variations than could occur across the current limiting resistor. The forwr d current should not be allowed to change by more than 40 % of its desired value.

Circuit model A

Circuit model B

(A) Recommended circuit.

(B) The difference of brightness between LED could be found due to the VF-IF characteristics of LED.

Cleaning:

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED.

ESD(Electrostatic Discharge):

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or anti-electrosatic glove is recommended when handing these LED. All devices, equipment and machinery must be properly grounded.

Precautions For Use:

Storage time:

- 1.The operation of Temperatures and RH are : 30 ,RH<60%.
- 2.Once the package is opened, the products should be used within a week.
Otherwise, they should be kept in a damp proof box with descanting agent.
Considering the tape life, we suggest our customers to use our products within a year(from production date).
- 3.If opened more than168hrs in an atmosphere 30 ,RH<60%,
The single LED end product must use for 125 for 10hours to eliminate wet
- 4.If opened more than168hrs in an atmosphere 30 ,RH<60%,
The reel and carrier end product must use for 60 for 24 hours to eliminate wet
