

**THREE TERMINAL NEGATIVE VOLTAGE REGULATORS**  
**-5V, -6V, -7V, -8V, -12V, -15V, -18V, -20V, -24V.**
**FEATURES**

- Suitable for C-MOS, TTL, and the other digital IC power supply.
- Internal thermal overload protecting.
- Output Current up to 1.5A.
- Internal short circuit current limiting.
- Package is TO-220AB

## TEST CIRCUIT

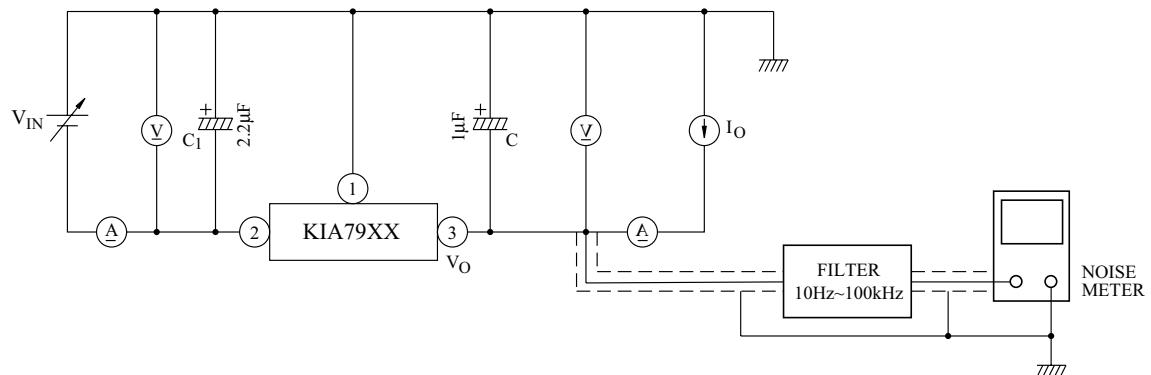

**Fig.1 Standard Test Circuit**

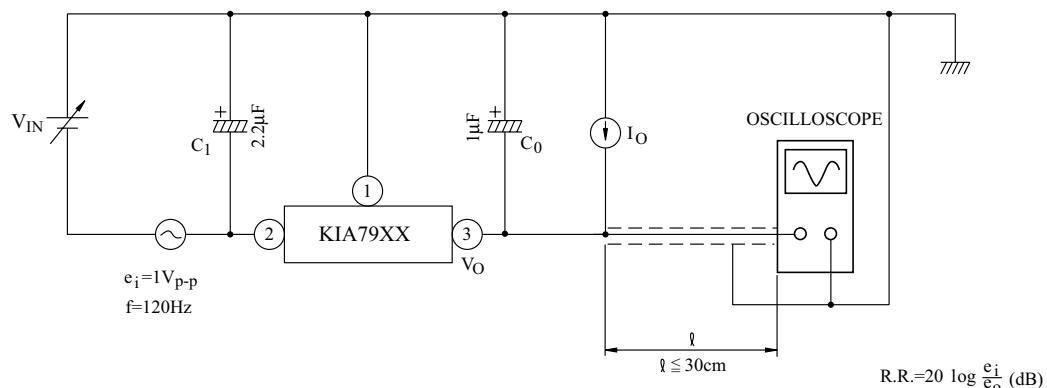

Notes : (1) To specify an output voltage, substitute voltage value for "XX"

- (2) Required for stability. For value given, capacitor must be solid tantalum. If aluminum electrolytics are used, at least ten times value shown should be selected.  $C_1$  is required if regulator is located an appreciable distance from power supply filter.
- (3) To improve transient response. If large capacitors are used, a high current diode from input to output (1N4001 or similar) should be introduced to protect the device from momentary input short circuit.
