## FEATURES

- Operate From 1.65 V to 3.6 V
- Inputs Accept Voltages to 5.5 V
- Max $\mathrm{t}_{\mathrm{pd}}$ of 5.3 ns at 3.3 V
- Typical $\mathrm{V}_{\text {olp }}$ (Output Ground Bounce) $<0.8 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$
- Typical $\mathrm{V}_{\text {OHV }}$ (Output $\mathrm{V}_{\text {OH }}$ Undershoot) $>2 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$
- Support Mixed-Mode Signal Operation on All Ports (5-V Input/Output Voltage With 3.3-V $\mathrm{V}_{\mathrm{cc}}$ )
- $I_{\text {off }}$ Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- ESD Protection Exceeds JESD 22
- 2000-V Human-Body Model (A114-A)
- 1000-V Charged-Device Model (C101)

## DESCRIPTION/ORDERING INFORMATION

The SN54LVC540A octal buffer/driver is designed for 2.7-V to $3.6-\mathrm{V} \mathrm{V}_{\mathrm{CC}}$ operation, and the SN74LVC540A octal buffer/driver is designed for $1.65-\mathrm{V}$ to $3.6-\mathrm{V} \mathrm{V}_{\mathrm{CC}}$ operation.
These devices are ideal for driving bus lines or buffer memory address registers. These devices feature inputs and outputs on opposite sides of the package that facilitate printed circuit board layout.

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

## DESCRIPTION/ORDERING INFORMATION (CONTINUED)

The 3-state control gate is a 2 -input AND gate with active-low inputs so that, if either output-enable ( $\overline{\mathrm{OE}}$ or $\overline{\mathrm{OE} 2}$ ) input is high, all outputs are in the high-impedance state.
Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed $3.3-\mathrm{V} / 5-\mathrm{V}$ system environment.

These devices are fully specified for partial-power-down applications using $\mathrm{I}_{\text {off. }}$. The $\mathrm{I}_{\text {off }}$ circuitry disables the outputs, preventing damaging current backflow through the devices when they are powered down.
To ensure the high-impedance state during power up or power down, $\overline{O E}$ should be tied to $\mathrm{V}_{\mathrm{CC}}$ through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

FUNCTION TABLE

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
(3) The value of $\mathrm{V}_{\mathrm{CC}}$ is provided in the recommended operating conditions table.
(4) The package thermal impedance is calculated in accordance with JESD 51-7.

## PARAMETER MEASUREMENT INFORMATION

NOTES: A. $\mathrm{C}_{\mathrm{L}}$ includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 10 \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega$.
D. The outputs are measured one at a time, with one transition per measurement.
E. $t_{P L Z}$ and $t_{P H Z}$ are the same as $t_{\text {dis }}$.
F. $t_{P Z L}$ and $t_{P Z H}$ are the same as $t_{e n}$.
G. $t_{P L H}$ and $t_{P H L}$ are the same as $t_{p d}$.
H. All parameters and waveforms are not applicable to all devices.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to Tl's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with Tl's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI .

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. Tl is not responsible or liable for such altered documentation.

Resale of Tl products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. Tl is not responsible or liable for any such statements.

[^0]:    ${ }^{(1)}$ The marketing status values are defined as follows:
    ACTIVE: Product device recommended for new designs.
    LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
    NRND: Not recommended for new designs. Device is in production to support existing customers, but Tl does not recommend using this part in a new design.
    PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
    OBSOLETE: TI has discontinued the production of the device.

[^1]:    ${ }^{(2)}$ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS \& no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
    TBD: The Pb-Free/Green conversion plan has not been defined.
    Pb-Free (RoHS): Tl's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
    Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb -Free (RoHS compatible) as defined above.
    Green (RoHS \& no $\mathbf{S b} / \mathrm{Br}$ ): Tl defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants ( Br or Sb do not exceed $0.1 \%$ by weight in homogeneous material)
    ${ }^{(3)}$ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

    Important Information and Disclaimer:The information provided on this page represents Tl's knowledge and belief as of the date that it is provided. Tl bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. Tl has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.
