

MC10H123

Triple 4-3-3-Input Bus Driver

Description

The MC10H123 is a triple 4-3-3-Input Bus Driver.

The MC10H123 consists of three NOR gates designed for bus driving applications on card or between cards. Output low logic levels are specified with $V_{OL} = -2.1$ Vdc so that the bus may be terminated to -2.0 Vdc. The gate output, when low, appears as a high impedance to the bus, because the output emitter-followers of the MC10H123 are “turned-off.” This eliminates discontinuities in the characteristic impedance of the bus.

The V_{OH} level is specified when driving a $25\ \Omega$ load terminated to -2.0 Vdc, the equivalent of a $50\ \Omega$ bus terminated at both ends. Although $25\ \Omega$ is the lowest characteristic impedance that can be driven by the MC10H123, higher impedance values may be used with this part. A typical $50\ \Omega$ bus is shown in Figure 3.

Table 1. MAXIMUM RATINGS

Symbol	Characteristic	Rating	Unit
V_{EE}	Power Supply ($V_{CC} = 0$)	-8.0 to 0	Vdc
V_I	Input Voltage ($V_{CC} = 0$)	0 to V_{EE}	Vdc
I_{out}	Output Current Continuous Surge	50 100	mA
T_A	Operating Temperature Range	0 to +75	°C
T_{stg}	Storage Temperature Range Plastic Ceramic	-55 to +150 -55 to +165	°C °C

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

- Each MECL 10H™ series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 lfpm is maintained. Outputs are terminated through a 50 Ω resistor to -2.1 V.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.
