

FEATURES

- Max. propagation delay of 1100ps
- Max. enable to output delay of 1400ps
- IEE min. of -80mA
- Industry standard 100K ECL levels
- Extended supply voltage option:
VEE = -4.2V to -5.5V
- Voltage and temperature compensation for improved noise immunity
- Internal 75KΩ input pull-down resistors
- 50% faster than Fairchild
- Function and pinout compatible with Fairchild F100K
- Available in 24-pin CERPACK and 28-pin PLCC packages

DESCRIPTION

The SY100S355 offers four transparent latches with differential outputs and is designed for use in high-performance ECL systems. The Select inputs ($\bar{S}_0$, S_1) select one of the two sources of input data (D_0 or D_1) to the latch. The Select inputs can also force the outputs to a logic LOW when the latch is in the transparent mode. The latches are in the transparent mode when both Enables ($\bar{E}_1$, $\bar{E}_2$) are at a logic LOW state. In the transparent mode, the Select inputs can pass an input logic HIGH from D_0 or D_1 to the output.

If the Select inputs are tied together, then input data from either D_0 or D_1 is always passed through. A rising edge on either Enable input will latch the outputs with the most recent data at the latch inputs being stored. The Master Reset (MR) input overrides all other inputs and takes the Q outputs to a logic LOW. The inputs on this device have 75KΩ pull-down resistors.

Notes:

1. $V_{EE} = -4.2V$ to $-5.5V$ unless otherwise specified; $V_{CC} = V_{CCA} = GND$
2. t_S is the minimum time before the transition of the clock that information must be present at the data input.
3. t_H is the minimum time after the transition of the clock that information must remain unchanged at the data input.

NOTES:

1. DIMENSIONS ARE IN INCHES[MM].
2. THIS DIMENSION INCLUDES GLASS PROTRUSION AND CAP TO BASE ALIGNMENT TOLERANCES.
3. DIMENSIONS SHOWN ARE MAX/MIN, WHERE NOTED.
