
SLLS500A − MAY 2001 − REVISED MARCH 2005

DIFFERENTIAL BUS TRANSCEIVER

FEATURES

- **One-Fourth Unit Load Allows up to 128 Devices on a Bus**
- **ESD Protection for Bus Terminals:**
  - **±15-kV Human Body Model**
  - **±8-kV IEC61000-4-2, Contact Discharge**
  - **±15-kV IEC61000-4-2, Air-Gap Discharge**
- **Meets or Exceeds the Requirements of ANSI Standard TIA/EIA-485-A and ISO 8482: 1987(E)**
- **Controlled Driver Output-Voltage Slew Rates Allow Longer Cable Stub Lengths**
- **Designed for Signaling Rates† Up to 250-kbps**
- **Low Disabled Supply Current . . . 250 μA Max**
- **Thermal Shutdown Protection**
- **Open-Circuit Fail-Safe Receiver Design**
- **Receiver Input Hysteresis . . . 70 mV Typ**
- **Glitch-Free Power-Up and Power-Down Protection**

APPLICATIONS

- **Utility Meters**
- **Industrial Process Control**
- **Building Automation**

DESCRIPTION

The SN65LBC182 and SN75LBC182 are differential data line transceivers with a high level of ESD protection in the trade-standard footprint of the SN75176. They are designed for balanced transmission lines and meet ANSI standard TIA/EIA-485-A and ISO 8482. The SN65LBC182 and SN75LBC182 combine a 3-state, differential line driver and differential input line receiver, both of which operate from a single 5-V power supply. The driver and receiver have active-high and active-low enables, respectively, which can be externally connected together to function as a direction control.

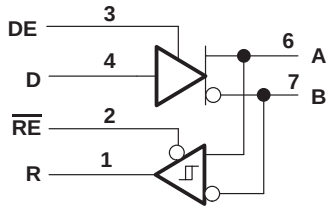
The driver outputs and the receiver inputs connect internally to form a differential input/output (I/O) bus port that is designed to offer minimum loading to the bus. This port operates over a wide range of common-mode voltage, making the device suitable for party-line applications. The device also includes additional features for party-line data buses in electrically noisy environment applications such as industrial process control or power inverters.

The SN75LBC182 and SN65LBC182 bus pins also exhibit a high input resistance equivalent to one-fourth unit load allowing connection of up to 128 similar devices on the bus. The high ESD tolerance protects the device for cabled connections. (For an even higher level of protection, see the SN65/75LBC184, literature number SLLS236.)

The differential driver design incorporates slew-rate-controlled outputs sufficient to transmit data up to 250 kbps. Slew-rate control allows longer unterminated cable runs and longer stub lengths from the main backbone than possible with uncontrolled voltage transitions. The receiver design provides a fail-safe output of a high level when the inputs are left floating (open circuit). Very low device supply current can be achieved by disabling the driver and the receiver.

The SN65LBC182 is characterized for operation from −40°C to 85°C, and the SN75LBC182 is characterized for operation from 0°C to 70°C.

functional block diagram



Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

†The signaling rate of a line, is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

AVAILABLE OPTIONS

T_A	PACKAGE	
	PLASTIC SMALL-OUTLINE† (JEDEC MS-012)	PLASTIC DUAL-IN-LINE PACKAGE (JEDEC MS-001)
0°C to 70°C	SN75LBC182D	SN75LBC182P
−40°C to 85°C	SN65LBC182D	SN65LBC182P

† Add R suffix for taped and reel.
† For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

absolute maximum ratings† over operating free−air temperature range unless otherwise noted

Supply voltage range, (see Note 1) V_{CC} . . . . . −0.5 V to 7 V
Voltage range at any bus terminal (A or B) . . . . . −15 V to 15 V
Input voltage, V_I (D, DE, R or $\overline{RE}$) . . . . . −0.3 V to 7 V
Receiver output current, I_O . . . . . ±20 mA
Electrostatic discharge: Human body model (see Note 2) A, B, GND . . . . . 15 kV
All pins . . . . . 3 kV
Contact discharge (IEC61000-4-2) A, B, GND . . . . . 8 kV
Air discharge (IEC61000-4-2) A, B, GND . . . . . 15 kV
Continuous total power dissipation . . . . . See Dissipation Rating Table

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
2. Tested in accordance with JEDEC Standard 22, Test Method A114-A.

DISSIPATION RATING TABLE

PACKAGE	$T_A \le 25°C$ POWER RATING	DERATING FACTOR‡ ABOVE $T_A = 25°C$	$T_A = 70°C$ POWER RATING	$T_A = 85°C$ POWER RATING
D	725 mW	5.8 mW/°C	464 mW	377 mW
P	1150 mW	9.2 mW/°C	736 mW	598 mW

‡ This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

NOTE: The maximum operating junction temperature is internally limited. Use the dissipation rating table to operate below this temperature

recommended operating conditions

		MIN	NOM	MAX	UNIT
Supply voltage, V_{CC}		4.75	5	5.25	V
Voltage at any bus I/O terminal (separately or common mode) V_I or V_{IC}		−7		12	V
High-level input voltage, V_{IH}	D, DE, $\overline{RE}$	2			V
Low-level input voltage, V_{IL}	D, DE, $\overline{RE}$			0.8	V
Differential input voltage, V_{ID} (see Note 3)		−12		12	V
Output current, I_O	Driver	−60		60	mA
	Receiver	−8		4	mA
Operating free-air temperature, T_A	SN65LBC182	−40		85	°C
	SN75LBC182	0		70	°C

NOTE 3: Differential input/output bus voltage is measured at the noninverting terminal A with respect to the inverting terminal B.

driver electrical characteristics over recommended operating conditions

PARAMETER			TEST CONDITIONS		MIN	TYP†	MAX	UNIT
V_{IK}	Input clamp voltage		I_I = −18 mA		−1.5			V
V_O	Output voltage		I_O = 0		0		V_{CC}	V
$\|V_{OD}\|$	Differential output voltage		R_L = 54 Ω,	See Figure 1	1.5	2.2	V_{CC}	V
			V_{test} = −7 V to 12 V,	See Figure 2	1.5	2.2	V_{CC}	V
ΔV_{OD}	Change in magnitude of differential output voltage		See Figure 1		−0.2		0.2	V
$V_{OC(SS)}$	Steady-state common-mode output voltage				1		3	
$\Delta V_{OC(SS)}$	Change in steady-state common-mode output voltage		See Figures 1 and 4		−0.2		0.2	
$V_{OC(PP)}$	Peak-to-peak change in common-mode output voltage during state transitions					0.8		V
I_{OZ}	High-impedance output current		See receiver input currents					
I_{IH}	High-level input current (D, DE)		V_I = 2.4 V				50	µA
I_{IL}	Low-level input current (D, DE)		V_I = 0.4 V		−50			µA
I_{OS}	Short-circuit output current		V_O = −7 V to 12 V		−250		250	mA
I_{CC}	Supply current	SN75LBC182	No load, DE at V_{CC},	$\overline{RE}$ at V_{CC}		12	25	mA
		SN65LBC182				12	30	

† All typical values are at V_{CC} = 5 V and T_A = 25°C.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
