

CD PLAY SOC(COMBINED SC9820 with CLOCK)

DESCRIPTION

SC9698P is a single chip of CD paly controller. This IC have CD play, DTS, TAPE, AUX, volume control, remote control, clock display and alarm functions. This IC include CD digital servo controller, signal processor, digital audio DAC output port, and headphone amplifier. It can drive LCD display directly with the least external components.

FEATURES

- * CD player
 - Compatible with CD/CD-R/CD-RW
 - Support CD play/pause
 - Support CD previous/next track
 - Support CD fast forward/backward
 - CD single track, all tracks playing display
 - CD play display in random
 - CD play with scan
 - CD and tape synch record function
- * Radio function
 - Four frequency bands can be selectable (USA, GEN1/2, JAPAN)
 - Manual tuner
 - Automatic tuner
 - Pre-keep radio stations (FM: 10, AM/MW: 10, LW:5)
- * Tape function
 - TAPE display
- * AUX function
 - AUX function
- * Electron volume control
 - CD/radio/tape/AUX channel switch
 - Volume control and display
 - Preset POP, CLASS, ROCK three mode.
 - Support mute ON/OFF and display.
 - Support X-BASS swotcher and display.
 - Support ENCODER-VOLUME control.
- * Clock function
 - Clock display
 - Alarm clock
 - Snoozer
 - Sleep

3. Radio key functions

1) TUNER

Press this key enter radio mode.

2) BAND

This key used to switch frequency bands: FM→AM→LW(selectable)→FM

3) REW

press the key, manual search the radio station

press the key continuance, auto search the radio station until find the stations.

4) FF

press the key, manual search the radio station

press the key continuance, auto search the radio station until find the stations.

5) MEMORY UP

Take out the memory status:

6) MEMORY

First press the MEMORY key, then press the number directly or select the station by the MEMORY UP key, it is keep in when press the MEMORY key again.

4. Radio display

1) FM BAND

2) AM BAND

3) Display the memory status

4) Display saving status

5. Tape mode

1. tape functions

1) TAPE

Press the key enter TAPE mode.

2. Display

6. CD mode

1. CD key functions

1) CD

press this key enter CD mode.

2) PLAY/PAUSE

Play/pause key.

3) STOP

Stop key.

4) RANDOM

Play with random (in the RANDOM station, press REW key invalible)

5) REW

Press the key: jump to the previous track.

Reach the previous track, if the current track is the last one, then reach the first track.

Press the key continuance: fast backward

Fast backward until release the key, if it is reach the first track, then play the tracks normally.

6) FF

Press the key: reach the next track

Reach the next track , if the current track is the last one, then reach the first track.

Press the key continuance: fast forward

Fast forward until the key released, if it is reach the last one, then paly tracks normally.

7) REPEAT

8) PROGRAM

Press this key enter program station (in the STOP station)

Press the REW/FF key select tracks, the program number increased when memory one track, the maximum tracks is 20. After program, the system begin playing tracks. It will quit program status if on operation at 8 seconds, but the tracks also remained.

If press the STOP key in program status, clear all program tracks, and quit the program status.

9) INTRO

This key used to switch the scan and play functions.

2. CD display

1) STOP status, display total tracks number and total time

2) PLAY status display

3) PAUSE status display

4) REW/FF status display

5) RANDOM status display

6) REPAEAT ALL display (the REPEAT symbol blinking at REPEAT ONE status)

7) Program status display

8) Programmable status display

7. Volume mode

1. Volume key description

1) VOLUME+/-

Volume increment or minishreduce.

2) MUTE

Mute ON/OFF control.

3) EQ

Switch the pre-set mode

2. volume display

1) VOLUME

8. other function

1. Descriptions

1) CLOCK

Press the DISPLAY key until reach the time mode, press the key MEMORY continuance, it enter time setting station, then press the UP/DOWN key adjust the time.

2) SLEEP

Press the SLEEP key, it enter sleep station, press the key again, set the sleep time (90~10 minutes).

When setting the sleep time, the SLEEP symbol blink in the LCD , and after timer turn on, the SLEEP symbol displayed in the LCD, press the SLEEP key again cancel the timer.

3) TIMER

Start by the setting time(alarm).

Adjust the time.

4) STAND BY/ON

Standby /ON switch

2. Display

1) Standby status

PACKAGE OUTLINE

HANDLING MOS DEVICES:

Electrostatic charges can exist in many things. All of our MOS devices are internally protected against electrostatic discharge but they can be damaged if the following precautions are not taken:

- Persons at a work bench should be earthed via a wrist strap.
- Equipment cases should be earthed.
- All tools used during assembly, including soldering tools and solder baths, must be earthed.
- MOS devices should be packed for dispatch in antistatic/conductive containers.
