

ICL8021/ICL8023

High Reliability Low Power Bipolar Operational Amplifier

GENERAL DESCRIPTION

The Intersil ICL8021 series are low power operational amplifiers specifically designed for applications requiring very low standby power consumption over a wide range of supply voltages. The electrical characteristics of the 8021 series can be tailored to a particular application by adjusting an external resistor, R_{SET} , which controls the quiescent current. This is advantageous because I_Q can be made independent of the supply voltages; it can be set to an extremely low value where power is critical, or to a larger value for high slew rate or wideband applications.

Other features of the 8021 series include low input current that remains constant with temperature, low noise, high input impedance, internal compensation and pin-for-pin compatibility with the 741.

The Intersil 8023 consists of three low power operational amplifiers in a single 16-pin DIP. Each amplifier is identical to an 8021 low power op amp, and has separate connections for adjusting its electrical characteristics by means of an external resistor, R_{SET} , which controls the quiescent current of that amplifier.

FEATURES

- $V_{OS} = 3\text{mV Max}$ (Adjustable to Zero)
- $\pm 1.5\text{V to } \pm 18\text{V Power Supply Operation}$
- **Power Consumption — $20\mu\text{W}$ @ $\pm 1\text{V}$**
- **Input Bias Current — 30nA Max**
- **Internal Compensation**
- **Pin-For-Pin Compatible With 741**
- **Short Circuit Protected**

Part Number	Temperature Range	Package
ICL8021MTY*	-55°C to +125°C	8 Lead Metal Can
ICL8023MJE*	-55°C to +125°C	16 Lead Cerdip

*Add /88313 to Part Number if 883B processing is required.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage	±18V
Differential Input Voltage (Note 1)	±15V
Common Mode Input Voltage (Note 1)	±15V
Output Short Circuit Duration	Indefinite
Power Dissipation (Note 2)	300mW

Operating Temperature Range	—55°C to +125°C
8021M/8023M	—55°C to +125°C
Storage Temperature Range	—65°C to +150°C
Lead Temperature (Soldering, 10sec)	+300°C

NOTE 1: For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.

NOTE 2: Rating applies for case temperatures to +125°C; derate linearly at 5.6 mW/°C for ambient temperatures above +95°C.

NOTE: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
