

8-bit Proprietary Microcontrollers

CMOS

F²MC-8FX MB95110B Series

MB95116B/F118BS/F118BW/FV100D-101

■ DESCRIPTION

The MB95110B series is general-purpose, single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers contain a variety of peripheral functions.

Note : F²MC is the abbreviation of FUJITSU Flexible Microcontroller.

■ FEATURES

- F²MC-8FX CPU core
Instruction set that is optimum to the controllers
 - Multiplication and division instructions
 - 16-bit arithmetic operation
 - Bit test branch instruction
 - Bit manipulation instructions etc.
- Clock
 - Main clock
 - Main PLL clock
 - Sub clock (for dual clock product)
 - Sub PLL clock (for dual clock product)

(Continued)

Be sure to refer to the "Check Sheet" for the latest cautions on development.

"Check Sheet" is seen at the following support page

URL : <http://www.fujitsu.com/global/services/microelectronics/product/micom/support/index.html>

"Check Sheet" lists the minimal requirement items to be checked to prevent problems beforehand in system development.

MB95110B Series

(Continued)

- Timer
 - 8/16-bit compound timer × 2 channels
 - 8/16-bit PPG × 2 channels
 - 16-bit PPG
 - Time-base timer
 - Watch prescaler (for dual clock product)
- LIN-UART
 - Full duplex double buffer
 - Clock asynchronous (UART) or Clock synchronous (SIO) serial data transfer capable
- UART/SIO
 - Full duplex double buffer
 - Clock asynchronous (UART) or Clock synchronous (SIO) serial data transfer capable
- I²C*
 - Built-in wake-up function
- External interrupt
 - Interrupt by edge detection (rising, falling, or both edges can be selected)
 - Can be used to recover from low-power consumption (standby) modes.
- 8/10-bit A/D converter
 - 8-bit or 10-bit resolution can be selected
- Low-power consumption (standby) mode
 - Stop mode
 - Sleep mode
 - Watch mode (for dual clock product)
 - Time-base timer mode
- I/O port:
 - The number of maximum ports
 - Single clock product : 39 ports
 - Dual clock product : 37 ports
 - Port configuration
 - General-purpose I/O ports (N-ch open drain) : 2 ports
 - General-purpose I/O ports (CMOS) : Single clock product : 37 ports
Dual clock product : 35 ports
- Flash memory security function
 - Protects the content of Flash memory (Flash memory device only)

* : Purchase of Fujitsu I²C components conveys a license under the Philips I²C Patent Rights to use, these components in an I²C system provided that the system conforms to the I²C Standard Specification as defined by Philips.

MB95110B Series

■ PRODUCT LINEUP

Part number		MB95116B	MB95F118BS	MB95F118BW
Parameter				
Type		MASK ROM product	Flash memory product	
ROM capacity		32 Kbytes	60 Kbytes	
RAM capacity		1 Kbyte	2 Kbytes	
Reset output		No		
Option*1	Clock system	Selectable single/dual clock*2	Single clock	Dual clock
	Low voltage detection reset	No		
CPU functions		Number of basic instructions : 136 Instruction bit length : 8 bits Instruction length : 1 to 3 bytes Data bit length : 1, 8, and 16 bits Minimum instruction execution time : 61.5 ns (at machine clock frequency 16.25MHz) Interrupt processing time : 0.6 μs (at machine clock frequency 16.25 MHz)		
Peripheral functions	General-purpose I/O port	• Single clock product : 39 ports (N-ch open drain : 2 ports, CMOS : 37 ports) • Dual clock product : 37 ports (N-ch open drain : 2 ports, CMOS : 35 ports)		
	Time-base timer	Interrupt cycle : 0.5 ms, 2.1 ms, 8.2 ms, 32.8 ms (at main oscillation clock 4 MHz)		
	Watchdog timer	Reset generated cycle At main oscillation clock 10 MHz : Minimum 105 ms At sub oscillation clock 32.768 kHz (for dual clock product) : Minimum 250 ms		
	Wild register	Capable of replacing 3 bytes of ROM data		
	I ² C	Master/slave sending and receiving Bus error function and arbitration function Detecting transmitting direction function Start condition repeated generation and detection functions Built-in wake-up function		
	UART/SIO	Data transfer capable in UART/SIO Full duplex double buffer, variable data length (5/6/7/8-bit), built-in baud rate generator NRZ type transfer format, error detected function LSB-first or MSB-first can be selected. Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable.		
	LIN-UART	Dedicated reload timer allowing a wide range of communication speeds to be set. Full duplex double buffer. Clock asynchronous (UART) or clock synchronous (SIO) serial data transfer capable. LIN functions available as the LIN master or LIN slave.		
	8/10-bit A/D converter (8 channels)	8-bit or 10-bit resolution can be selected.		

(Continued)

MB95110B Series

(Continued)

Part number		MB95116B	MB95F118BS	MB95F118BW
Parameter				
Peripheral functions	8/16-bit compound timer (2 channels)	Each channel of the timer can be used as “8-bit timer × 2 channels” or “16-bit timer × 1 channel”. Built-in timer function, PWC function, PWM function, capture function and square wave form output Count clock : 7 internal clocks and external clock can be selected.		
	16-bit PPG	PWM mode or one-shot mode can be selected. Counter operating clock : 8 selectable clock sources Support for external trigger start		
	8/16-bit PPG (2 channels)	Each channel of the PPG can be used as “8-bit PPG × 2 channels” or “16-bit PPG × 1 channel”. Counter operating clock : Eight selectable clock sources		
	Watch counter (for dual clock product)	Count clock : Four selectable clock sources (125ms, 250ms, 500ms, or 1s) Counter value can be set from 0 to 63. (Capable of counting for 1 minute when selecting clock source 1 second and setting counter value to 60)		
	Watch prescaler (for dual clock product)	4 selectable interval times (125 ms, 250 ms, 500 ms, or 1 s)		
	External interrupt (8 channels)	Interrupt by edge detection (rising, falling, or both edges can be selected) Can be used to recover from standby modes.		
	Flash memory	Supports automatic programming, Embedded Algorithm™ *3 Write/Erase/Erase-Suspend/Resume commands A flag indicating completion of the algorithm Number of write/erase cycles (Minimum) : 10000 times Data retention time : 20 years Boot block configuration Erase can be performed on each block Block protection with external programming voltage Flash Security Feature for protecting the content of the Flash		
Standby mode		Sleep, stop, watch (for dual clock product) , and time-base timer		

*1 : For details of option, refer to “■ MASK OPTIONS”.

*2 : Specify clock mode when ordering MASK ROM.

*3 : Embedded Algorithm is a trade mark of Advanced Micro Devices Inc.

Note : Part number of the evaluation products in MB95110B series is MB95FV100D-101. When using it, the MCU board (MB2146-301A) is required.

■ SELECT OF OSCILLATION STABILIZATION WAIT TIME (MASK ROM PRODUCT ONLY)

For the MASK ROM product, you can set the mask option when ordering MASK ROM to select the initial value of main clock oscillation stabilization wait time from among the following four values.

Note that the evaluation and Flash memory products are fixed their initial value of main clock oscillation stabilization wait time at the maximum value.

Selection of oscillation stabilization wait time	Remarks
$(2^2 - 2) / F_{CH}$	0.5 μ s (at main oscillation clock 4 MHz)
$(2^{12} - 2) / F_{CH}$	Approx. 1.02 ms (at main oscillation clock 4 MHz)
$(2^{13} - 2) / F_{CH}$	Approx. 2.05 ms (at main oscillation clock 4 MHz)
$(2^{14} - 2) / F_{CH}$	Approx. 4.10 ms (at main oscillation clock 4 MHz)

MB95110B Series

■ DIFFERENCES AMONG PRODUCTS AND NOTES ON SELECTING PRODUCTS

- Notes on Using Evaluation Products

The evaluation product has not only the functions of the MB95110B corresponding products series but also those of other products to support software development for multiple series and models of the F²MC-8FX family. The I/O addresses for peripheral resources not used by the MB95110B series are therefore access-barred. Read/write access to these access-barred addresses may cause peripheral resources supposed to be unused to operate, resulting in unexpected malfunctions of hardware or software.

Particularly, do not use word access to odd numbered byte address in the prohibited areas (If these access are used, the address may be read or written unexpectedly).

Note that the values read from barred addresses are different between the evaluation product and the Flash memory product. Therefore, the value must not be used for program.

The evaluation product do not support the functions of some bits in single-byte registers. Read/write access to these bits does not cause hardware malfunctions. The evaluation, Flash memory, and MASK ROM products are designed to behave completely the same way in terms of hardware and software.

- Difference of Memory Spaces

If the amount of memory on the evaluation product is different from that of the Flash memory or MASK ROM product, carefully check the difference in the amount of memory from the model to be actually used when developing software.

For details of memory space, refer to “■ CPU CORE”.

- Current Consumption

The current consumption of Flash memory product is greater than for MASK ROM product.
For details of current consumption, refer to “■ ELECTRICAL CHARACTERISTICS”.

- Package

For details of information on each package, refer to “■ PACKAGE DIMENSIONS”.

- Operating voltage

The operating voltage are different among the evaluation, Flash memory, and MASK ROM products.
For details of operating voltage, refer to “■ ELECTRICAL CHARACTERISTICS”

- Difference between \overline{RST} and MOD pins

The input type of \overline{RST} and MOD pins is CMOS input on the Flash memory product.

The \overline{RST} and MOD pins are hysteresis inputs on the MASK ROM product. A pull - down resistor is provided for the MOD pin of the MASK ROM product.

PIN ASSIGNMENTS

■ PIN DESCRIPTION

Pin no.		Pin name	I/O Circuit type*3	Function
LQFP*1	LQFP*2			
1	1	P65/SCK	K	General-purpose I/O port. The pin is shared with LIN-UART clock I/O.
2	2	P66/SOT		General-purpose I/O port. The pin is shared with LIN-UART data output.
3	3	P67/SIN	L	General-purpose I/O port. The pin is shared with LIN-UART data input.
4	4	P37/AN07	J	General-purpose I/O port. The pins are shared with A/D converter analog input.
5	5	P36/AN06		
6	6	P35/AN05		
7	8	P34/AN04		
8	9	P33/AN03		
9	10	P32/AN02		
10	11	P31/AN01		
11	12	P30/AN00		
12	13	AVss	—	A/D converter power supply pin (GND)
13	14	AVcc	—	A/D converter power supply pin
14	15	P24/EC0	H	General-purpose I/O port. The pin is shared with 8/16-bit compound timer ch.0 clock input.
15	16	P23/TO01		General-purpose I/O port. The pins are shared with 8/16-bit compound timer ch.0 output.
16	17	P22/TO00		General-purpose I/O port. The pins are shared with 8/16-bit PPG ch.0 output.
17	18	P21/PPG01		
18	19	P20/PPG00		
19	21	P51/SDA0	I	General-purpose I/O port. The pin is shared with I ² C ch.0 data I/O.
20	22	P50/SCL0		General-purpose I/O port. The pin is shared with I ² C ch.0 clock I/O.
21	23	MOD	B	Operating mode designation pin
22	24	X0	A	Main clock input oscillation pin
23	25	X1		Main clock input/output oscillation pin
24	26	Vss	—	Power supply pin (GND)
25	27	Vcc	—	Power supply pin
26	28	PG0	H	General-purpose I/O port.

■ HANDLING DEVICES

- Preventing Latch-up

Care must be taken to ensure that maximum voltage ratings are not exceeded when they are used.

Latch-up may occur on CMOS ICs if voltage higher than V_{CC} or lower than V_{SS} is applied to input and output pins other than medium- and high-withstand voltage pins or if higher than the rating voltage is applied between V_{CC} pin and V_{SS} pin.

When latch-up occurs, power supply current increases rapidly and might thermally damage elements.

Also, take care to prevent the analog power supply voltage (AV_{CC}) and analog input voltage from exceeding the digital power supply voltage (V_{CC}) when the analog system power supply is turned on or off.

- Stable Supply Voltage

Supply voltage should be stabilized.

A sudden change in power-supply voltage may cause a malfunction even within the guaranteed operating range of the V_{CC} power-supply voltage.

For stabilization, in principle, keep the variation in V_{CC} ripple (p-p value) in a commercial frequency range (50 Hz/60 Hz) not to exceed 10% of the standard V_{CC} value and suppress the voltage variation so that the transient variation rate does not exceed 0.1 V/ms during a momentary change such as when the power supply is switched.

- Precautions for Use of External Clock

Even when an external clock is used, oscillation stabilization wait time is required for power-on reset, wake-up from sub clock mode or stop mode.

■ PIN CONNECTION

- Treatment of Unused Input Pin

Leaving unused input pins unconnected can cause abnormal operation or latch-up, leaving to permanent damage. Unused input pins should always be pulled up or down through resistance of at least 2 k Ω .

Any unused input/output pins may be set to output mode and left open, or set to input mode and treated the same as unused input pins. If there is unused output pin, make it to open.

- Treatment of Power Supply Pins on A/D Converter

Connect to be $AV_{CC} = V_{CC}$ and $AV_{SS} = V_{SS}$ even if the A/D converter is not in use.

Noise riding on the AV_{CC} pin may cause accuracy degradation. So, connect approx. 0.1 μ F ceramic capacitor as a bypass capacitor between AV_{CC} and AV_{SS} pins in the vicinity of this device.

- Power Supply Pins

In products with multiple V_{CC} or V_{SS} pins, the pins of the same potential are internally connected in the device to avoid abnormal operations including latch-up. However, you must connect the pins to external power supply and a ground line to lower the electro-magnetic emission level, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total output current rating.

Moreover, connect the current supply source with the V_{CC} and V_{SS} pins of this device at the low impedance.

It is also advisable to connect a ceramic capacitor of approximately 0.1 μ F as a bypass capacitor between V_{CC} and V_{SS} pins near this device.

- Mode Pin (MOD)

Connect the MOD pin directly to V_{CC} or V_{SS} pins.

To prevent the device unintentionally entering test mode due to noise, lay out the printed circuit board so as to minimize the distance from the MOD pin to V_{CC} or V_{SS} pins and to provide a low-impedance connection.

- Analog Power Supply

Always set the same potential to AV_{CC} and V_{CC} . When $V_{CC} > AV_{CC}$, the current may flow through the AN00 to AN07 pins.

MB95110B Series

■ PROGRAMMING FLASH MEMORY MICROCONTROLLERS USING PARALLEL PROGRAMMER

• Supported Parallel Programmers and Adapters

The following table lists supported parallel programmers and adapters.

Package	Applicable adapter model	Parallel programmers
FPT-48P-M26	TEF110-118F37AP	AF9708 (Ver 02.35G or more) AF9709/B (Ver 02.35G or more) AF9723+AF9834 (Ver 02.08E or more)
FPT-52P-M01	TEF110-95F118PMC	
LCC-48P-M09	TEF100-118F41AP	

Note: For information on applicable adapter models and parallel programmers, contact the following:
Flash Support Group, Inc. TEL: +81-53-428-8380

• Sector Configuration

The individual sectors of Flash memory correspond to addresses used for CPU access and programming by the parallel programmer as follows:

Flash memory	CPU address	Writer address*	
SA1 (4 Kbytes)	1000 _H	71000 _H	Lower bank
	1FFF _H	71FFF _H	
SA2 (4 Kbytes)	2000 _H	72000 _H	
	2FFF _H	72FFF _H	
SA3 (4 Kbytes)	3000 _H	73000 _H	Upper bank
	3FFF _H	73FFF _H	
SA4 (16 Kbytes)	4000 _H	74000 _H	
	7FFF _H	77FFF _H	
SA5 (16 Kbytes)	8000 _H	78000 _H	
	BFFF _H	7BFFF _H	
SA6 (4 Kbytes)	C000 _H	7C000 _H	
	CFFF _H	7CFFF _H	
SA7 (4 Kbytes)	D000 _H	7D000 _H	
	DFFF _H	7DFFF _H	
SA8 (4 Kbytes)	E000 _H	7E000 _H	
	FFFF _H	7EFFF _H	
SA9 (4 Kbytes)	F000 _H	7F000 _H	
	FFFF _H	7FFFF _H	

*: Programmer addresses are equivalent to CPU addresses, used when the parallel programmer programs data into Flash memory.
These programmer addresses are used for the parallel programmer to program or erase data in Flash memory.

- **Programming Method**

- 1) Set the type code of the parallel programmer to "17226".
- 2) Load program data to programmer addresses 71000_H to 7FFFF_H.
- 3) Programmed by parallel programmer.

MB95110B Series

■ BLOCK DIAGRAM

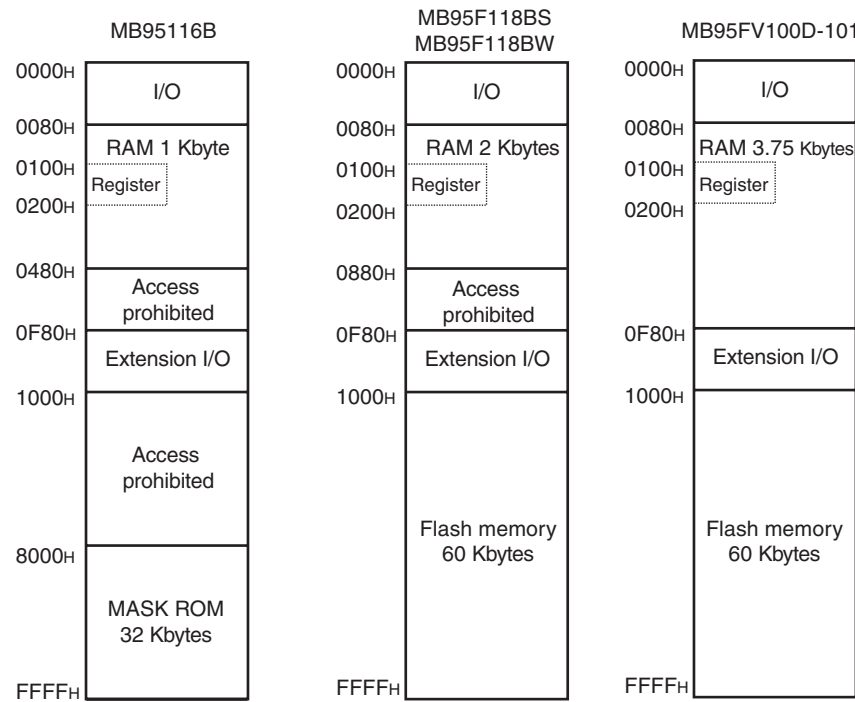

* : The pins are general-purpose port in single clock product and sub clock oscillation pin in dual clock product.

CPU CORE

1. Memory space

Memory space of the MB95110B series is 64 Kbytes and consists of I/O area, data area, and program area. The memory space includes special-purpose areas such as the general-purpose registers and vector table. Memory map of the MB95110B series shown in below.

• Memory Map

MB95110B Series

2. Register

The MB95110B series has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The dedicated registers are as follows:

- Program counter (PC) : A 16-bit register to indicate locations where instructions are stored.
- Accumulator (A) : A 16-bit register for temporary storage of arithmetic operations. In the case of an 8-bit data processing instruction, the lower one byte is used.
- Temporary accumulator (T) : A 16-bit register which performs arithmetic operations with the accumulator. In the case of an 8-bit data processing instruction, the lower one byte is used.
- Index register (IX) : A 16-bit register for index modification
- Extra pointer (EP) : A 16-bit pointer to point to a memory address.
- Stack pointer (SP) : A 16-bit register to indicate a stack area.
- Program status (PS) : A 16-bit register for storing a register bank pointer, a direct bank pointer, and a condition code register

	16-bit		Initial Value
PC		: Program counter	FFFD _H
A		: Accumulator	0000 _H
T		: Temporary accumulator	0000 _H
IX		: Index register	0000 _H
EP		: Extra pointer	0000 _H
SP		: Stack pointer	0000 _H
PS		: Program status	0030 _H

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and a direct bank pointer (DP) and the lower 8 bits for use as a condition code register (CCR). (Refer to the diagram below.)

• Structure of the program status

The RP indicates the address of the register bank currently being used. The relationship between the content of RP and the real address conforms to the conversion rule illustrated below:

- Rule for Conversion of Actual Addresses in the General-purpose Register Area

The DP specifies the area for mapping instructions (16 different instructions such as MOV A, dir) using direct addresses to 0080_H to 00FF_H.

Direct bank pointer (DP2 to DP0)	Specified address area	Mapping area
XXX _B (no effect to mapping)	0000 _H to 007F _H	0000 _H to 007F _H (without mapping)
000 _B (initial value)	0080 _H to 00FF _H	0080 _H to 00FF _H (without mapping)
001 _B		0100 _H to 017F _H
010 _B		0180 _H to 01FF _H
011 _B		0200 _H to 027F _H
100 _B		0280 _H to 02FF _H
101 _B		0300 _H to 037F _H
110 _B		0380 _H to 03FF _H
111 _B		0400 _H to 047F _H

The CCR consists of the bits indicating arithmetic operation results or transfer data contents and the bits that control CPU operations at interrupt.

- H flag : Set to "1" when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. This flag is for decimal adjustment instructions.
- I flag : Interrupt is enabled when this flag is set to "1". Interrupt is disabled when this flag is set to "0". The flag is set to "0" when reset.
- IL1, IL0 : Indicates the level of the interrupt currently enabled. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	IL0	Interrupt level	Priority
0	0	0	<div style="text-align: center;"> High ↑↓ Low = no interruption </div>
0	1	1	
1	0	2	
1	1	3	

- N flag : Set to "1" if the MSB is set to "1" as the result of an arithmetic operation. Cleared to "0" when the bit is set to "0".
- Z flag : Set to "1" when an arithmetic operation results in "0". Cleared to "0" otherwise.
- V flag : Set to "1" if the complement on 2 overflows as a result of an arithmetic operation. Cleared to "0" otherwise.
- C flag : Set to "1" when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared to "0" otherwise. Set to the shift-out value in the case of a shift instruction.

MB95110B Series

The following general-purpose registers are provided:

General-purpose registers: 8-bit data storage registers

The general-purpose registers are 8 bits and located in the register banks on the memory. One bank contains eight registers. Up to a total of 32 banks can be used on the MB95110B series. The bank currently in use is specified by the register bank pointer (RP), and the lower 3 bits of OP code indicates the general-purpose register 0 (R0) to general-purpose register 7 (R7).

- Register Bank Configuration

■ I/O MAP

Address	Register abbreviation	Register name	R/W	Initial value
0000 _H	PDR0	Port 0 data register	R/W	00000000 _B
0001 _H	DDR0	Port 0 direction register	R/W	00000000 _B

- R/W access symbols

R/W : Readable/Writable

R : Read only

W : Write only

- Initial value symbols

0 : The initial value of this bit is “0”.

1 : The initial value of this bit is “1”.

X : The initial value of this bit is undefined.

Note : Do not write to the “ (Disabled) ”. Reading the “ (Disabled) ” returns an undefined value.

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	V _{CC} , AV _{CC}	V _{SS} – 0.3	V _{SS} + 4.0	V	*2
Input voltage*1	V _{I1}	V _{SS} – 0.3	V _{SS} + 4.0	V	Other than P50, P51*3
	V _{I2}	V _{SS} – 0.3	V _{SS} + 6.0		P50, P51
Output voltage*1	V _O	V _{SS} – 0.3	V _{SS} + 4.0	V	*3
Maximum clamp current	I _{CLAMP}	– 2.0	+ 2.0	mA	Applicable to pins*4
Total maximum clamp current	Σ I _{CLAMP}	—	20	mA	Applicable to pins*4
“L” level maximum output current	I _{OL1}	—	15	mA	Other than P00 to P07
	I _{OL2}		15		P00 to P07
“L” level average current	I _{OLAV1}	—	4	mA	Other than P00 to P07 Average output current = operating current × operating ratio (1 pin)
	I _{OLAV2}		12		P00 to P07 Average output current = operating current × operating ratio (1 pin)
“L” level total maximum output current	ΣI _{OL}	—	100	mA	
“L” level total average output current	ΣI _{OLAV}	—	50	mA	Total average output current = operating current × operating ratio (total of pins)
“H” level maximum output current	I _{OH1}	—	– 15	mA	Other than P00 to P07
	I _{OH2}		– 15		P00 to P07
“H” level average current	I _{OHAV1}	—	– 4	mA	Other than P00 to P07 Average output current = operating current × operating ratio (1 pin)
	I _{OHAV2}		– 8		P00 to P07 Average output current = operating current × operating ratio (1 pin)
“H” level total maximum output current	ΣI _{OH}	—	– 100	mA	
“H” level total average output current	ΣI _{OHAV}	—	– 50	mA	Total average output current = operating current × operating ratio (total of pins)
Power consumption	P _d	—	320	mW	
Operating temperature	T _A	– 40	+ 85	°C	
Storage temperature	T _{stg}	– 55	+ 150	°C	

(Continued)

MB95110B Series

(Continued)

- *1 : The parameter is based on $AV_{CC} = V_{SS} = 0.0 \text{ V}$.
- *2 : Apply equal potential to AV_{CC} and V_{CC} .
- *3 : V_{I1} and V_O should not exceed $V_{CC} + 0.3 \text{ V}$. V_{I1} must not exceed the rating voltage. However, if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supersedes the V_{I1} rating.
- *4 :
 - Applicable to pins : P00 to P07, P10 to P15, P20 to P24, P30 to P37, PG0
 - Use within recommended operating conditions.
 - Use at DC voltage (current).
 - +B signal is an input signal that exceeds V_{CC} voltage. The + B signal should always be applied a limiting resistance placed between the + B signal and the microcontroller.
 - The value of the limiting resistance should be set so that when the + B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
 - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this may affect other devices.
 - Note that if the + B signal is inputted when the microcontroller power supply is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.
 - Note that if the + B input is applied during power-on, the power supply is provided from the pins and the resulting power supply voltage may not be sufficient to operate the power-on reset.
 - Care must be taken not to leave the + B input pin open.
 - Sample recommended circuits :

• Input/Output Equivalent Circuits

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Operating Conditions

($AV_{SS} = V_{SS} = 0.0\text{ V}$)

Parameter	Symbol	Pin name	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
Power supply voltage	V_{CC} , AV_{CC}	—	—	1.8*	—	3.3	V	At normal operating, Flash memory product, $T_A = -10\text{ °C to }+85\text{ °C}$
				1.8*	—	3.6		At normal operating, MASK ROM product, $T_A = -10\text{ °C to }+85\text{ °C}$
				2.0*	—	3.3		At normal operating, Flash memory product, $T_A = -40\text{ °C to }+85\text{ °C}$
				2.0*	—	3.6		At normal operating, MASK ROM product, $T_A = -40\text{ °C to }+85\text{ °C}$
				2.6	—	3.6		MB95FV100D-101, $T_A = +5\text{ °C to }+35\text{ °C}$
				1.5	—	3.3		Retain status of stop mode operation, Flash memory product
				1.5	—	3.6		Retain status of stop mode operation, MASK ROM product
Operating temperature	T_A	—	—	-40	—	+85	°C	

* : The values vary with the operating frequency.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

MB95110B Series

3. DC Characteristics

($V_{CC} = AV_{CC} = 3.3\text{ V}$, $AV_{SS} = V_{SS} = 0.0\text{ V}$, $T_A = -40\text{ }^{\circ}\text{C}$ to $+85\text{ }^{\circ}\text{C}$)

Parameter	Symbol	Pin name	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
“H” level input voltage	V_{IH1}	P10, P67	*1	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	At selecting of CMOS input level (hysteresis input)

*1 : Clock before setting division due to machine clock division ratio selection bit (SYCC : DIV1 and DIV0) . This source clock is divided by the machine clock division ratio selection bit (SYCC : DIV1 and DIV0) , and it becomes the machine clock. Further, the source clock can be selected as follow.

- Main clock divided by 2
- PLL multiplication of main clock (select from 1, 2, 2.5 4 multiplication)
- Sub clock divided by 2
- PLL multiplication of sub clock (select from 2, 3, 4 multiplication)

*2 : Operation clock of the microcontroller. Machine clock can be selected as follow.

- Source clock (no division)
- Source clock divided by 4
- Source clock divided by 8
- Source clock divided by 16

(3) External Reset

($V_{CC} = 3.3\text{ V}$, $AV_{SS} = V_{SS} = 0.0\text{ V}$, $T_A = -40\text{ }^{\circ}\text{C}$ to $+85\text{ }^{\circ}\text{C}$)

Parameter	Symbol	Value		Unit	Remarks
		Min	Max		
$\overline{\text{RST}}$ "L" level pulse width	t_{RSTL}	$2 t_{\text{MCLK}}^{*1}$	—	ns	At normal operating
		Oscillation time of oscillator ^{*2} + $2 t_{\text{MCLK}}^{*1}$	—	ns	At stop mode, sub clock mode, sub sleep mode, and watch mode

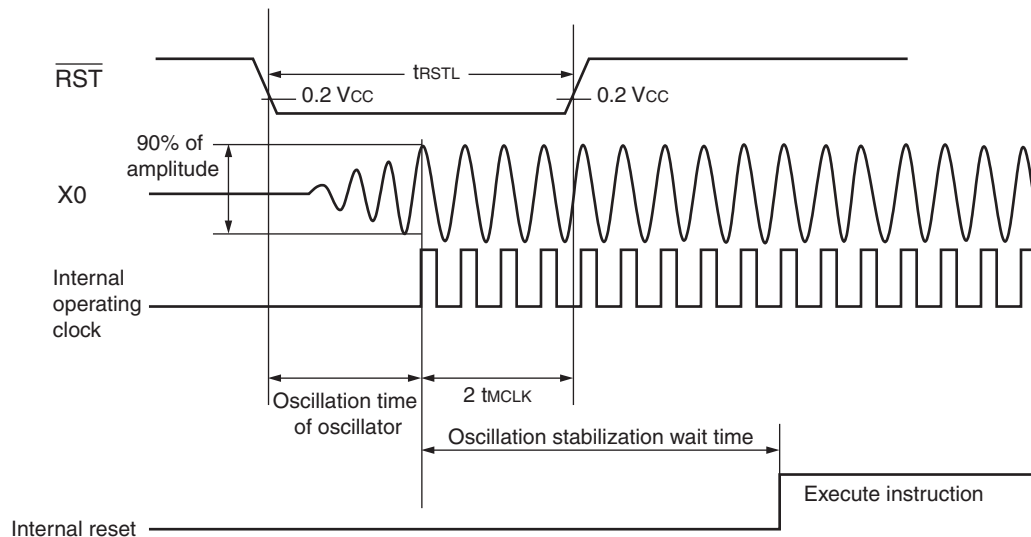

*1 : Refer to "(2) Source Clock/Machine Clock" for t_{MCLK} .

*2 : Oscillation time of oscillator is the time that the amplitude reaches 90 %. In the crystal oscillator, the oscillation time is between several ms and tens of ms. In ceramic oscillators, the oscillation time is between hundreds of μs and several ms. In the external clock, the oscillation time is 0 ms.

• At normal operating

• At stop mode, sub clock mode, sub sleep mode, watch mode, and power-on

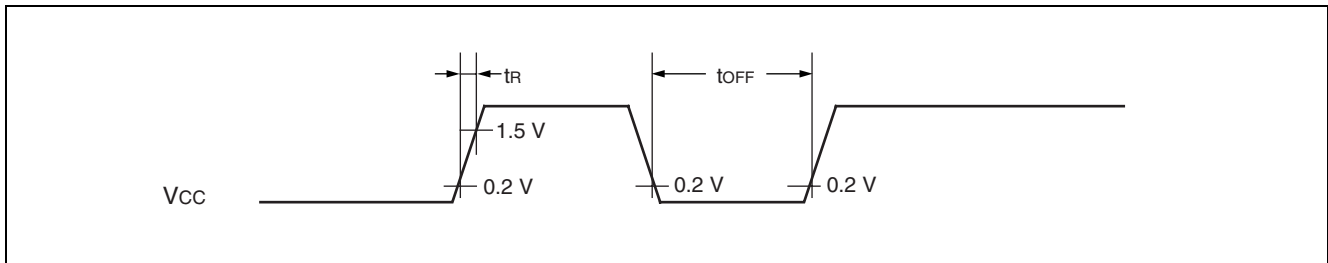

(4) Power-on Reset

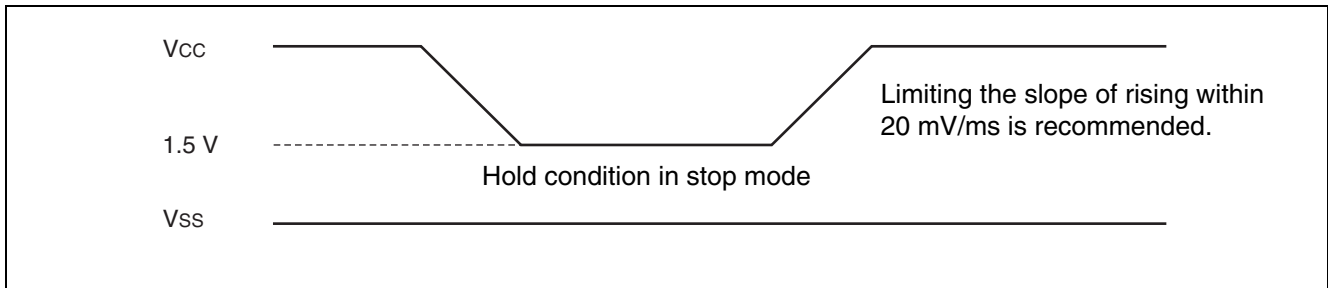

($A_{VSS} = V_{SS} = 0.0 \text{ V}$, $T_A = -40 \text{ }^{\circ}\text{C}$ to $+85 \text{ }^{\circ}\text{C}$)

Parameter	Symbol	Conditions	Value		Unit	Remarks
			Min	Max		
Power supply rising time	t_R	—	—	36	ms	
Power supply cutoff time	t_{OFF}	—	1	—	ms	Waiting time until power-on

Note : The power supply must be turned on within the selected oscillation stabilization time.

Note : Sudden change of power supply voltage may activate the power-on reset function. When changing power supply voltages during operation, set the slope of rising within 20 mV/ms as shown below.

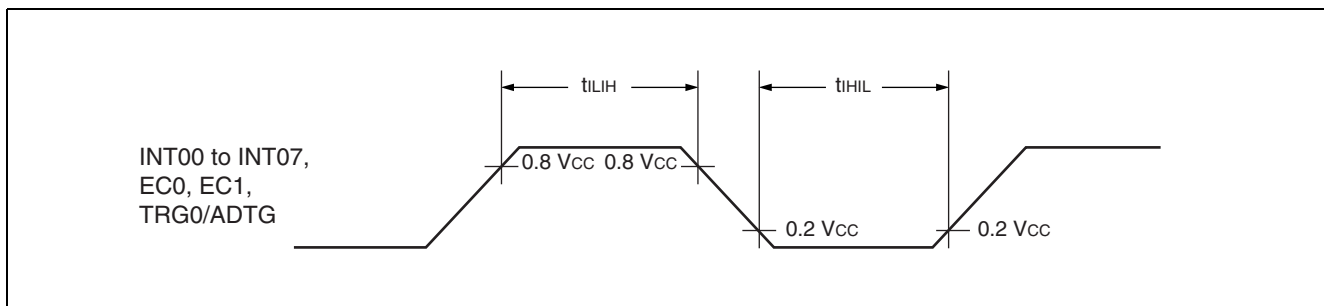

MB95110B Series

(5) Peripheral Input Timing

(8) I²C Timing

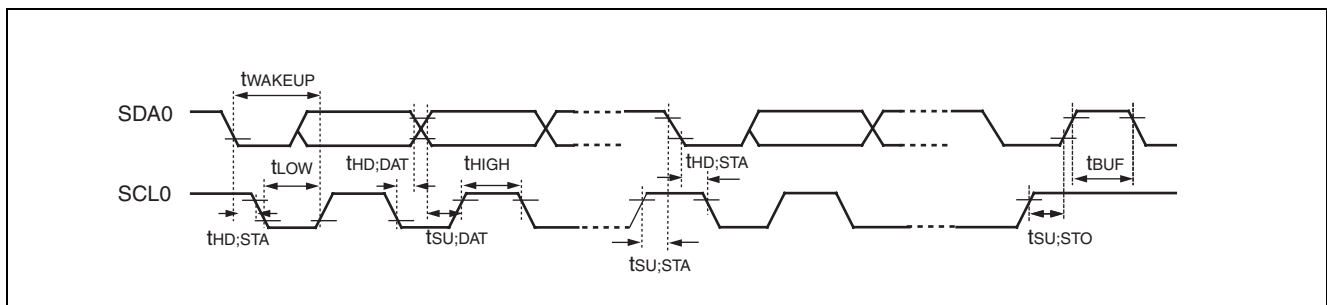

(V_{CC} = 3.3 V, AV_{SS} = V_{SS} = 0.0 V, T_A = -40 °C to +85 °C)

Parameter	Symbol	Pin name	Conditions	Value				Unit
				Standard-mode		Fast-mode		
				Min	Max	Min	Max	
SCL clock frequency	f _{SCL}	SCL0	R = 1.7 kΩ, C = 50 pF*1	0	100	0	400	kHz
(Repeat) Start condition hold time SDA ↓ → SCL ↓	t _{HD;STA}	SCL0 SDA0		4.0	—	0.6	—	μs
SCL clock “L” width	t _{LOW}	SCL0		4.7	—	1.3	—	μs
SCL clock “H” width	t _{HIGH}	SCL0		4.0	—	0.6	—	μs
(Repeat) Start condition setup time SCL ↑ → SDA ↓	t _{SU;STA}	SCL0 SDA0		4.7	—	0.6	—	μs
Data hold time SCL ↓ → SDA ↓ ↑	t _{HD;DAT}	SCL0 SDA0		0	3.45*2	0	0.9*3	μs
Data setup time SDA ↓ ↑ → SCL ↑	t _{SU;DAT}	SCL0 SDA0		0.25	—	0.1	—	μs
Stop condition setup time SCL ↑ → SDA ↑	t _{SU;STO}	SCL0 SDA0		4	—	0.6	—	μs
Bus free time between stop condition and start condition	t _{BUF}	SCL0 SDA0		4.7	—	1.3	—	μs

*1 : R, C : Pull-up resistor and load capacitor of the SCL and SDA lines.

*2 : The maximum t_{HD;DAT} have only to be met if the device dose not stretch the "L" width (t_{LOW}) of the SCL signal.

*3 : A Fast-mode I²C-bus device can be used in a Standard-mode I²C-bus system, but the requirement t_{SU;DAT} ≥ 250 ns must then be met.

MB95110B Series

(V_{CC} = 3.3 V, AV_{SS} = V_{SS} = 0.0 V, T_A = -40 °C to + 85 °C)

Parameter	Sym- bol	Pin name	Condition	Value*2		Unit	Remarks
				Min	Max		
SCL clock "L" width	t _{LOW}	SCL0	R = 1.7 kΩ, C = 50 pF*1	$(2 + nm / 2) t_{MCLK} - 20$	—	ns	Master mode
SCL clock "H" width	t _{HIGH}	SCL0		$(nm / 2) t_{MCLK} - 20$	$(nm / 2) t_{MCLK} + 20$	ns	Master mode
Start condition hold time	t _{HD;STA}	SCL0 SDA0		$(-1 + nm / 2) t_{MCLK} - 20$	$(-1 + nm) t_{MCLK} + 20$	ns	Master mode Maximum value is applied when m, n = 1, 8. Otherwise, the minimum value is applied.
Stop condition setup time	t _{SU;STO}	SCL0 SDA0		$(1 + nm / 2) t_{MCLK} - 20$	$(1 + nm / 2) t_{MCLK} + 20$	ns	Master mode
Start condition setup time	t _{SU;STA}	SCL0 SDA0		$(1 + nm / 2) t_{MCLK} - 20$	$(1 + nm / 2) t_{MCLK} + 20$	ns	Master mode
Bus free time between stop condition and start condition	t _{BUF}	SCL0 SDA0		$(2 nm + 4) t_{MCLK} - 20$	—	ns	
Data hold time	t _{HD;DAT}	SCL0 SDA0		$3 t_{MCLK} - 20$	—	ns	Master mode
Data setup time	t _{SU;DAT}	SCL0 SDA0		$(-2 + nm / 2) t_{MCLK} - 20$	$(-1 + nm / 2) t_{MCLK} + 20$	ns	Master mode When assuming that "L" of SCL is not extended, the minimum value is applied to first bit of continuous data. Otherwise, the maximum value is applied.
Setup time between clearing interrupt and SCL rising	t _{SU;INT}	SCL0		$(nm / 2) t_{MCLK} - 20$	$(1 + nm / 2) t_{MCLK} + 20$	ns	Minimum value is applied to interrupt at 9th SCL↓. Maximum value is applied to interrupt at 8th SCL↓.
SCL clock "L" width	t _{LOW}	SCL0		$4 t_{MCLK} - 20$	—	ns	At reception
SCL clock "H" width	t _{HIGH}	SCL0		$4 t_{MCLK} - 20$	—	ns	At reception
Start condition detection	t _{HD;STA}	SCL0 SDA0		$2 t_{MCLK} - 20$	—	ns	Undetected when 1 t _{MCLK} is used at reception
Stop condition detection	t _{SU;STO}	SCL0 SDA0		$2 t_{MCLK} - 20$	—	ns	Undetected when 1 t _{MCLK} is used at reception
Restart condition detection condition	t _{SU;STA}	SCL0 SDA0		$2 t_{MCLK} - 20$	—	ns	Undetected when 1 t _{MCLK} is used at reception
Bus free time	t _{BUF}	SCL0 SDA0		$2 t_{MCLK} - 20$	—	ns	At reception
Data hold time	t _{HD;DAT}	SCL0 SDA0		$2 t_{MCLK} - 20$	—	ns	At slave transmission mode
Data setup time	t _{SU;DAT}	SCL0 SDA0		$t_{LOW} - 3 t_{MCLK} - 20$	—	ns	At slave transmission mode

MB95110B Series

(Continued)

Parameter	Symbol	Pin name	Condition	Value*2		Unit	Remarks
				Min	Max		
Data hold time	$t_{HD;DAT}$	SCL0 SDA0	$R = 1.7\text{ k}\Omega$, $C = 50\text{ pF}^{*1}$	0	—	ns	At reception
Data setup time	$t_{SU;DAT}$	SCL0 SDA0		$t_{MCLK} - 20$	—	ns	At reception
SDA↓→SCL↑ (at wake-up function)	t_{WAKEUP}	SCL0 SDA0		Oscillation stabilization wait time $+ 2 t_{MCLK} - 20$	—	ns	

*1 : R, C : Pull-up resistor and load capacitor of the SCL and SDA lines.

*2 : • Refer to “(2) Source Clock/Machine Clock” for t_{MCLK} .

- m is CS4 bit and CS3 bit (bit 4 and bit 3) of clock control register (ICCR) .
- n is CS2 bit to CS0 bit (bit 2 to bit 0) of clock control register (ICCR) .
- Actual timing of I²C is determined by m and n values set by the machine clock (t_{MCLK}) and CS4 to CS0 of ICCR0 register.
- Standard-mode :
m and n can be set at the range : $0.9\text{ MHz} < t_{MCLK}$ (machine clock) $< 10\text{ MHz}$.
Setting of m and n limits the machine clock that can be used below.

(m, n) = (1, 8)	: $0.9\text{ MHz} < t_{MCLK} \leq 1\text{ MHz}$
(m, n) = (1, 22), (5, 4), (6, 4), (7, 4), (8, 4)	: $0.9\text{ MHz} < t_{MCLK} \leq 2\text{ MHz}$
(m, n) = (1, 38), (5, 8), (6, 8), (7, 8), (8, 8)	: $0.9\text{ MHz} < t_{MCLK} \leq 4\text{ MHz}$
(m, n) = (1, 98)	: $0.9\text{ MHz} < t_{MCLK} \leq 10\text{ MHz}$
- Fast-mode :
m and n can be set at the range : $3.3\text{ MHz} < t_{MCLK}$ (machine clock) $< 10\text{ MHz}$.
Setting of m and n limits the machine clock that can be used below.

(m, n) = (1, 8)	: $3.3\text{ MHz} < t_{MCLK} \leq 4\text{ MHz}$
(m, n) = (1, 22), (5, 4)	: $3.3\text{ MHz} < t_{MCLK} \leq 8\text{ MHz}$
(m, n) = (6, 4)	: $3.3\text{ MHz} < t_{MCLK} \leq 10\text{ MHz}$

5. A/D Converter

(1) A/D Converter Electrical Characteristics

(AVcc = Vcc = 1.8 V to 3.3 V [Flash memory product], AVcc = Vcc = 1.8 V to 3.6 V [MASK ROM product], AVss = Vss = 0.0 V, TA = -40 °C to +85 °C)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Resolution	—	—	—	10	bit	
Total error		-3.0	—	+3.0	LSB	
Linearity error		-2.5	—	+2.5	LSB	
Differential linear error		-1.9	—	+1.9	LSB	
Zero transition voltage	V _{OT}	AVss - 1.5 LSB	AVss + 0.5 LSB	AVss + 2.5 LSB	V	Flash memory product : 2.7 V ≤ AVcc ≤ 3.3 V MASK ROM product : 2.7 V ≤ AVcc ≤ 3.6 V
		AVss - 0.5 LSB	AVss + 1.5 LSB	AVss + 3.5 LSB	V	1.8 V ≤ AVcc < 2.7 V
Full-scale transition voltage	V _{FST}	AVcc - 3.5 LSB	AVcc - 1.5 LSB	AVcc + 0.5 LSB	V	Flash memory product : 2.7 V ≤ AVcc ≤ 3.3 V MASK ROM product : 2.7 V ≤ AVcc ≤ 3.6 V
		AVcc - 2.5 LSB	AVcc - 0.5 LSB	AVcc + 1.5 LSB	V	1.8 V ≤ AVcc < 2.7 V
Compare time	—	1.3	—	140	μs	Flash memory product : 2.7 V ≤ AVcc ≤ 3.3 V MASK ROM product : 2.7 V ≤ AVcc ≤ 3.6 V
		20	—	140	μs	1.8 V ≤ AVcc < 2.7 V
Sampling time	—	0.4	—	∞	μs	Flash memory product : 2.7 V ≤ AVcc ≤ 3.3 V MASK ROM product : 2.7 V ≤ AVcc ≤ 3.6 V external impedance < at 1.8 kΩ
		30	—	∞	μs	1.8 V ≤ AVcc < 2.7 V external impedance < at 14.8 kΩ
Analog input current	I _{AIN}	-0.3	—	+0.3	μA	
Analog input voltage	V _{AIN}	AVss	—	AVcc	V	
Reference voltage	—	AVss + 1.8	—	AVcc	V	AVcc pin
Reference voltage supply current	I _R	—	400	600	μA	AVcc pin, During A/D operation
	I _{RH}	—	—	5	μA	AVcc pin, at stop mode

MB95110B Series

(2) Notes on Using A/D Converter

• About the external impedance of analog input and its sampling time

A/D converter with sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision. Therefore, to satisfy the A/D conversion precision standard, consider the relationship between the external impedance and minimum sampling time and either adjust the resistor value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. Also, if the sampling time cannot be sufficient, connect a capacitor of about 0.1 μF to the analog input pin.

• Analog input equivalent circuit

	R	C
$2.7\text{ V} \leq AV_{CC} \leq 3.6\text{ V}$	1.7 k Ω (Max)	14.5 pF (Max)
$1.8\text{ V} \leq AV_{CC} < 2.7\text{ V}$	84 k Ω (Max)	25.2 pF (Max)

Note : The values are reference values.

• The relationship between external impedance and minimum sampling time

(External impedance = 0 k Ω to 100 k Ω)

(External impedance = 0 k Ω to 20 k Ω)

• About errors

As $|AV_{CC} - AV_{SS}|$ becomes smaller, values of relative errors grow larger.

(3) Definition of A/D Converter Terms

- Resolution

The level of analog variation that can be distinguished by the A/D converter.

When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.

- Linearity error (unit : LSB)

The deviation between the value along a straight line connecting the zero transition point

("00 0000 0000" $\leftarrow \rightarrow$ "00 0000 0001") of a device and the full-scale transition point

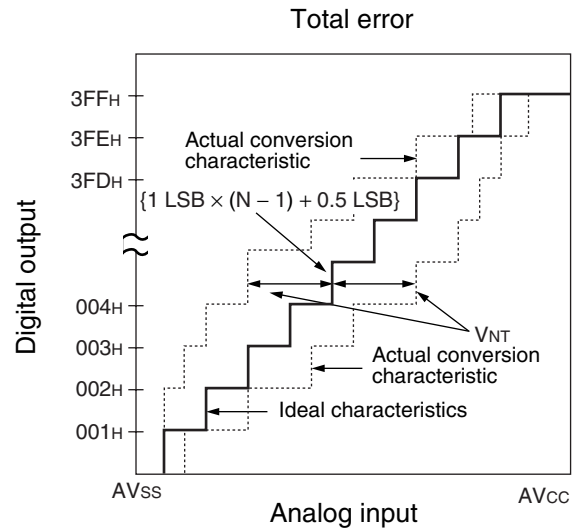

("11 1111 1111" $\leftarrow \rightarrow$ "11 1111 1110") compared with the actual conversion values obtained.

- Differential linear error (Unit : LSB)

Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.

- Total error (unit: LSB)

Difference between actual and theoretical values, caused by a zero transition error, full-scale transition error, linearity error, quantum error, and noise.

$$1 \text{ LSB} = \frac{AV_{CC} - AV_{SS}}{1024} \text{ (V)}$$

$$\text{Total error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

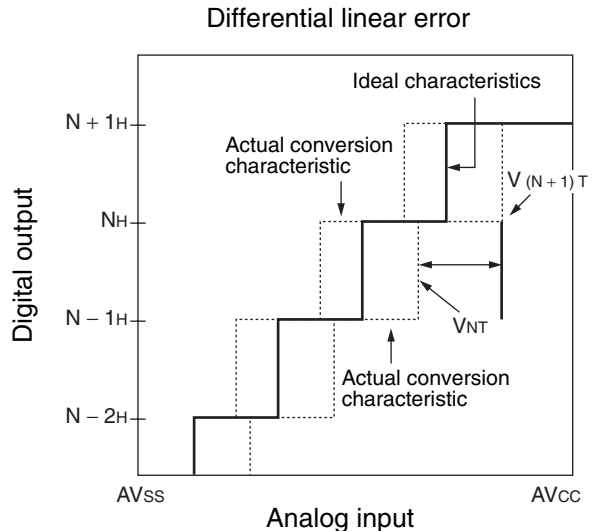

N : A/D converter digital output value

V_{NT} : A voltage at which digital output transits from (N - 1) to N.

(Continued)

MB95110B Series

(Continued)

$$\text{Linear error in digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

$$\text{Differential linear error in digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

N : A/D converter digital output value

V_{NT} : A voltage at which digital output transits from $(N - 1)$ to N .

V_{OT} (Ideal value) = $AV_{SS} + 0.5 \text{ LSB}$ [V]

V_{FST} (Ideal value) = $AV_{CC} - 1.5 \text{ LSB}$ [V]

6. Flash Memory Program/Erase Characteristics

Parameter	Value			Unit	Remarks
	Min	Typ	Max		
Sector erase time (4 Kbytes sector)	—	0.2 ^{*1}	3.0 ^{*2}	s	Excludes 00 _H programming prior erasure
Sector erase time (16 Kbytes sector)	—	0.5 ^{*1}	12.0 ^{*2}	s	Excludes 00 _H programming prior erasure
Byte programming time	—	32	3600	μs	Excludes system-level overhead
Erase/program cycle	10000	—	—	cycle	
Power supply voltage at erase/program	2.7	—	3.3	V	
Flash data retention time	20 ^{*3}	—	—	year	Average T _A = +85 °C

*1 : T_A = +25 °C, V_{CC} = 3.0 V, 10000 cycles

*2 : T_A = +85 °C, V_{CC} = 2.7 V, 10000 cycles

*3 : This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at +85 °C) .

FUJITSU LIMITED

All Rights Reserved.

The contents of this document are subject to change without notice.
Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
