

- 4.5-V to 5.5-V Operation
- Fully Static Operation
- Buffered Inputs
- Common Reset
- Positive-Edge Clocking
- Balanced Propagation Delay and Transition Times
- Direct LSTTL Input Logic Compatibility
 - $V_{IL} = 0.8 \text{ V}$ Maximum; $V_{IH} = 2 \text{ V}$ Minimum
- CMOS Input Compatibility
 - $I_I \leq 1 \mu\text{A}$ at V_{OL} , V_{OH}
- Packaged in Ceramic (F) DIP Packages and Also Available in Chip Form (H)

description

The CD54HCT4017 is a high-speed silicon-gate CMOS 5-stage Johnson counter with ten decoded outputs. Each decoded output normally is low and sequentially goes high on the low-to-high transition of the clock (CP) input. Each output stays high for one clock period of the ten-clock-period cycle. The terminal count (TC) output transitions low to high after output ten (9) goes low, and can be used in conjunction with the clock enable ($\overline{\text{CE}}$) input to cascade several stages. $\overline{\text{CE}}$ disables counting when in the high state. The master reset (MR) input, when taken high, sets all the decoded outputs, except 0, to low.

The CD54HCT4017 is characterized for operation over the full military temperature range of -55°C to 125°C .

FUNCTION TABLE

INPUTS			OUTPUT STATE†
CP	$\overline{\text{CE}}$	MR	
L	X	L	No change
X	H	L	No change
X	X	H	0 = H 1–9 = L
↑	L	L	Increments counter
↓	X	L	No change
X	↑	L	No change
H	↓	L	Increments counter

† If $n < 5$, TC = H; otherwise, TC = L.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

logic diagram (positive logic)

absolute maximum ratings over operating free-air temperature (unless otherwise noted)[†]

Supply voltage range, V_{CC}	–0.5 V to 7 V
Input clamp current, I_{IK} ($V_I < 0$ V or $V_I > V_{CC}$)	±20 mA
Output clamp current, I_{OK} ($V_O < 0$ V or $V_O > V_{CC}$)	±20 mA
Continuous output current, each output pin, I_O ($V_O > 0$ V or $V_O < V_{CC}$)	±25 mA
V_{CC} or ground current, I_{CC}	±50 mA
Storage temperature range, T_{stg}	–65°C to 150°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

recommended operating conditions (see Note 1)

			MIN	MAX	UNIT
V_{CC}	Supply voltage		4.5	5.5	V
V_{IH}	High-level input voltage	$V_{CC} = 4.5$ V to 5.5 V	2		V
V_{IL}	Low-level input voltage	$V_{CC} = 4.5$ V to 5.5 V		0.8	V
V_I	Input voltage		0	V_{CC}	V
V_O	Output voltage		0	V_{CC}	V
t_t	Input transition (rise and fall) time	$V_{CC} = 2$ V	0	1000	ns
		$V_{CC} = 4.5$ V	0	500	
		$V_{CC} = 6$ V	0	400	
T_A	Operating free-air temperature		–55	125	°C

NOTE 1: All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to TI application report *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	V _{CC}	T _A = 25°C			MIN	MAX	UNIT
				MIN	TYP	MAX			
V _{OH}	CMOS loads	V _I = V _{IH} or V _{IL} , I _O = –0.02 mA	4.5 V	4.4			4.4		V
	TTL loads	V _I = V _{IH} or V _{IL} , I _O = –4 mA	4.5 V	3.98			3.7		
V _{OL}	CMOS loads	V _I = V _{IH} or V _{IL} , I _O = 0.02 mA	4.5 V			0.1		0.1	V
	TTL loads	V _I = V _{IH} or V _{IL} , I _O = 4 mA	4.5 V			0.26		0.4	
I _I		V _I = V _{CC} to 0	5.5 V			±100		±1000	nA
I _{CC}		V _I = V _{CC} or 0	5.5 V			8		160	μA
ΔI _{CC} [†]		V _I = V _{CC} to 2.1 V, I _O = 0	4.5 to 5.5 V		100	360		490	μA
C _i						10		10	pF

[†] For dual-supply systems, theoretical worst case (V_I = 2.4 V, V_{CC} = 5.5 V) specification is 1.8 mA.

INPUT LOADING

INPUT	UNIT LOAD
CP	0.15
$\overline{\text{CE}}$	0.25
MR	0.3

Unit load is ΔI_{CC} limit, e.g.,
360 μA MAX at T_A = 25°C.

timing requirements over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		V _{CC}	T _A = 25°C		MIN	MAX	UNIT

PARAMETER MEASUREMENT INFORMATION

- NOTES:
- A. C_L includes probe and test-fixture capacitance.
 - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 - C. Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: $PRR \leq 1 \text{ MHz}$, $Z_O = 50 \Omega$, $t_r = 6 \text{ ns}$, $t_f = 6 \text{ ns}$.
 - D. The outputs are measured one at a time with one input transition per measurement.
 - E. $tpLZ$ and $tpHZ$ are the same as t_{dis} .
 - F. $tpZL$ and $tpZH$ are the same as t_{en} .
 - G. $tpLH$ and $tpHL$ are the same as t_{pd} .

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
