APA18T12 - 12Vin, 75Watts, Non-isolated DC – DC POL SIP Converter

The single output APA18T12 is a non-isolated, 75W, SIP footprint Point-of-Load (POL) DC/DC converter. The new APA18T12 series can deliver an adjustable output voltage range from 0.75V – 5.5V at 18 Amps (A) with efficiency as high as 93.5%, and the input voltage range is from 10 – 14V.

Special Features

- Point of Load (POL) applications
- High current slew rate at 1A/uS
- Industry standard footprint
- Open frame SIP
- -40°C to +85°C Ambient operating temperature
- Positive enable function
- Low output ripple and noise
- Adjustable output voltage through external resistor programming
- Regulation to zero load

Safety

UL, cUL 60950 Recognized
TUV EN60950 Licensed

Electrical Specifications

The product shall comply with the requirements of this specification for all valid conditions of line input voltage, load current, temperature and other environmental conditions, unless otherwise specified in this document.

Description	
External Input Fuse ^{1,2}	Fast-acting 20A maximum
External Input Capacitance	22uF/16V*3 Ceramic Cap.
External Output Capacitance	10uF Tantalum Cap. +1uF Ceramic Cap.
+V _{IN}	+10Vdc to 14Vdc
Enable	Open
GND	Return for both V _{IN} and V _O
Trim	Resistor Programming [See App A6]
+Vout	Output Pin connected to Load
Airflow ³	200LFM/300LFM
T _A (Ambient Temperature)	-40°C to 85°C

NOTE: 1. Refer to Appendix A4 for typical application circuit.
2. The converter is not internally fused; Engineering needs to specify a fuse appropriate to the package size of the converter.
3. Refer to Appendix A1 for correct airflow and module orientation & Appendix B for the derating curves of different airflow.

ABSOLUTE MAXIMUM RATINGS

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this specification. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability. The converter shall be designed, labeled and safety approved for maximum continuous rating as follows:

- NOTE: 2. Refer to Appendix A3 for the Output Ripple and Noise Test Measurement Setup.
3. Output Power Derating applies at elevated temperature. See Appendix B for the Derating Curves.
4. OCP and OTP are in shutdown mode. The converter will auto restart without the need to recycle the input voltage or toggle the enable signal and once the fault is removed.
5. Measure output rise time from 10%V_O to 90%V_O. See Appendix A5.
6. Load step response shall be measured at the load side of the output capacitors. See Appendix A4 for the output and input cap requirement.
7. See appropriate Trim Equation and configuration in Appendix A6.
8. The combination of remote sense and output trim adjust can not exceed 0.25V.
9. No OCP for V_O<1.5V. Module is protected by OTP when output is overload if V_O<1.5V.
10. Under 25°C.

APPENDIX A6: OUTPUT TRIM REQUIREMENT

Output voltage adjustment is accomplished by connecting an external resistor between the Trim Pin and Ground Pin terminals. Resistance and Output voltage relationship is established by Equation 1. If Trim pin is left open – default $V_O = 0.75V$

TRIM-UP EQUATION:
$$R_{trim} = \frac{10500}{V_O - 0.75} - 1000$$

Where R_{trim} is the resistance value in ohms and V_O is the output voltage desired.
