

SI-3000N Series**3-Terminal, Full-Mold, Low Dropout Voltage Dropper Type****■Features**

- Compact full-mold package (equivalent to TO220)
- Output current: 1.0A
- Low dropout voltage: $V_{DIF} \leq 1V$ (at $I_o = 1.0A$)
- Built-in foldback overcurrent, overvoltage, thermal protection circuits

■Applications

- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

**■Absolute Maximum Ratings**

(Ta=25°C)

Parameter	Symbol	Ratings			Unit
		SI-3050N	SI-3090N/3120N	SI-3150N	
DC Input Voltage	V _{IN}	25	30	35	V
DC Output Current	I _O	1.0 [*] 2			A
Power Dissipation	P _{D1}	14 (With infinite heatsink)			W
	P _{D2}	1.5 (Without heatsink, stand-alone operation)			W
Junction Temperature	T _j	−40 to +125			°C
Ambient Operating Temperature	T _{op}	−30 to +100			°C
Storage Temperature	T _{stg}	−40 to +125			°C
Thermal Resistance (junction to case)	R _{th(j-c)}	7.0			°C/W
Thermal Resistance (junction to ambient air)	R _{th(j-a)}	66.7 (Without heatsink, stand-alone operation)			°C/W

■Electrical Characteristics

(Ta=25°C unless otherwise specified)

¹: "A" may be indicated to the right of the Sanken logo.²: V_{IN(max)} and I_{O(max)} are restricted by the relation P_{D(max)}=(V_{IN}-V_O)•I_O=14(W).³: Refer to the dropout voltage.(Refer to Setting DC Input Voltage on page 7.)⁴: I_{S1} is specified at -5(%) drop point of output voltage V_O on the condition that V_{IN}=V_O+3V, I_O=0.5A.⁵: A foldback type overcurrent protection circuit is built into the IC regulator. Therefore, avoid using it for the following applications as it may cause starting errors:

- (1) Constant current load
- (2) Plus/minus power
- (3) Series power
- (4) V_O adjustment by raising ground voltage

■Outline Drawing

Plastic Mold Package Type
Flammability: UL94V-0
Weight: Approx. 2.3g

■Block Diagram

■Standard External Circuit

C_0 : Output capacitor (47 to 100 μ F)

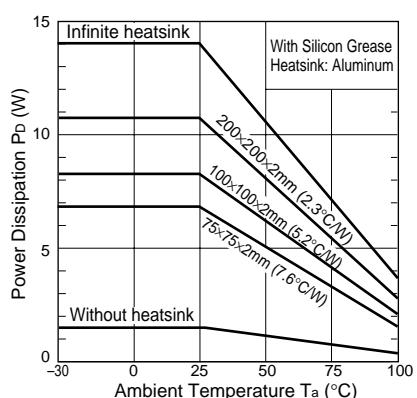

*1 $C_1 \quad C_2$ } : Oscillation prevention capacitor
(C_1 : Approx. 47 μ F, C_2 : 0.33 μ F)

These capacitors are required if the input line is inductive and in the case of long wiring. Tantalum capacitors are recommended for C_1 and C_0 , particularly at low temperatures.

*2 D_1 : Protection diode

This diode is required for protection against reverse biasing of the input and output. Sanken EU2Z is recommended.

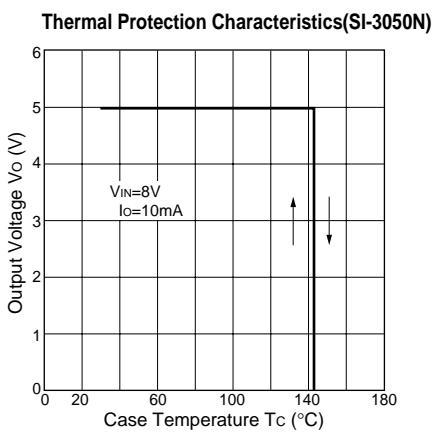

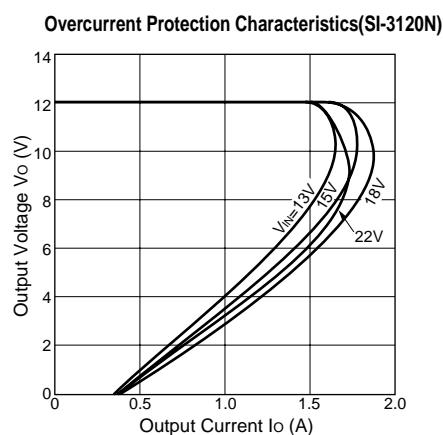

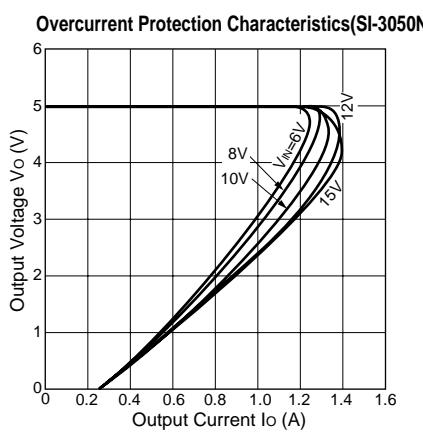

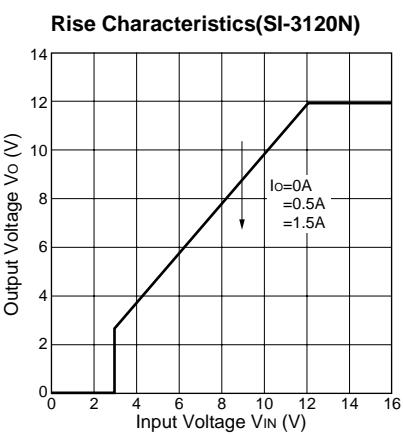

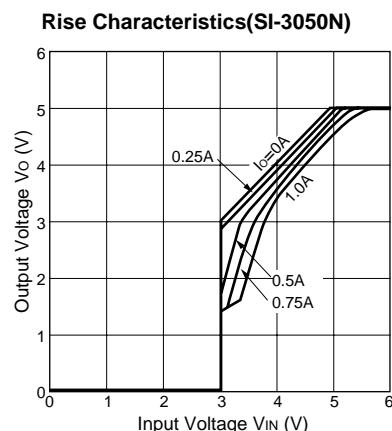

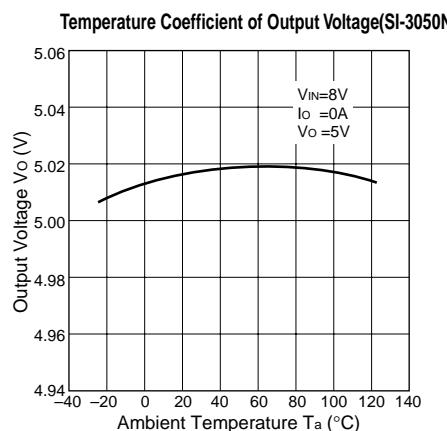

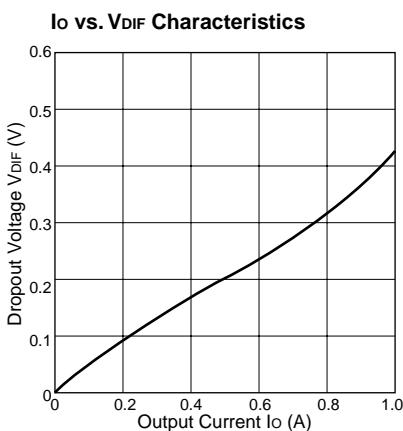

■Ta-Pd Characteristics

$$P_d = I_o \cdot [V_{IN}(\text{mean}) - V_o]$$

■Typical Characteristics

($T_a=25^\circ\text{C}$)

Note on Thermal Protection:

The thermal protection circuit is intended for protection against heat during instantaneous short-circuiting. Its operation is not guaranteed for short-circuiting over extended periods of time.
