AM/FM IF SYSTEM

TA7758P has developed for music centers and radio cassette recorders. It is included many functions and it can be used for Digital Tuning System. High sensitivity of FM gain is obtained by use this IC with TA7358P.

- . FM IF Amp is 2 block.
- . Including the muting circuit using the low distortion VCA (Voltage Controlled Amplifier) and the muting attenuation and bandwidth are randomly adjusted by this circuit.
- . Including the excellent response of the directly LED driver circuit and it is capable to use the auto stop pulse for the DTS.
- . Excellent strong signal characteristics.
- . Randomly adjustable frequency characteristics of the AM detection output.
- . Built-in the AM/FM switch.
- . Common output for AM/FM.
- . Low quiescent current : AM=8mA(Typ.), FM=11mA(Typ.)
- . Few external parts.
- . Operating supply voltage range : $V_{CC}=3\sim 8V$

Unit in mm

Lead pitch is 2.54 and tolerance is ± 0.25 against theoretical center of each lead that is obtained on the basis of No.1 and No.20 leads.
