Incorporated Fixed Resistor

A fixed resistor can be incorporated in the Series 115 at the end of CW or CCW rotation to a minimum of 15% of the total resistance value. The rotation is shortened by an amount proportional to the ratio of the fixed resistor to the total resistance value.

Angle of Rotation

$270^\circ \pm 5^\circ$

Adjustment of Resistance

Standard: Cross slot provided in rotor for screwdriver adjustment.

Special: Molded nylon, screwdriver-slotted shafts which are integral with rotor are available in many lengths in increments of 1/8" (3.2mm) up to a maximum of 2" (50.8mm).

Available Mounting Types

Printed circuit mounted: Type 115
Twist tab mounted: Type P115
Ear mounted: Type 116
Rivet ear mounted: Type 117

Terminal Information

Grounded Construction — The grounded construction is supplied without a center terminal and the contactor is connected to the case. This construction can be furnished with one end terminal at either end of the resistance element or with terminals at both ends of the element.

Insulated Construction — The contactor is insulated from the base and connected to the center terminal on the insulated construction. This construction can be supplied with the center terminal and one end terminal at either end of the resistance element or with the center terminal and terminals at both ends of the resistance element.

Rotational Torque

Turning Torque: 1/2 to 10 inch-ounces (36 – 720 g-cm)
Stop Strength: 4 inch-pounds (4.6 Kg-cm)
