NOTES

- The JR Series requires a minimum 10% loading on the output to maintain specified regulation. Operation under no load condition will not damage these devices, however, they may not meet all listed specifications.
- Please add an external filter at converter input terminals when measuring input reflected ripple current (See Figure 1).
L: Simulated source impedance of 12uH C: Nippon chemi-con KMF Series 47uF/100V.
- The ON/OFF control pin voltage is referenced to -Vin.
To order negative logic On/Off control add the suffix "R" (Ex: JR12S5-2000R).
- BELLCORE TR-NWT-000332. Case 1: 50% Stress, Temperature at 40°C. (Ground fixed and controlled environment).
- "I" Version is more efficient; therefore, it can be operated over a more extensive temperature range than the standard version. Please add the suffix "-I" for industrial grade temperature range models.
- Heat sink is optional, please consult factory for ordering details.
- The JR Series meets 55022 class B with external components connected before the input pin to the converter.
- Maximum value at nominal input voltage and full load of standard type.
- Typical value at nominal input voltage and no load.
- Tested at minimum Vin and constant resistive load.
