

ES7010 and ES7011 MPEG2 AV Encoder Product Brief

The ES7010 and ES7011 are MPEG2 audio video encoders. They consist of a video encode/transcode unit, audio DSP engine, a 32-bit RISC CPU, a video input/output unit and a system control unit. The devices use either 8MB or 16MB of SDRAM depending on the functions. This device is the optimal choice for consumer digital video recording and playback needs.

Part Number Differences Explained

The ES7010 and ES7011 are alike except that the ES7011 supports Dolby Digital Consumer Electronics (DDCE) audio encoding. Accordingly, Dolby Digital audio enabling software is only provided with the ES7011 product. To simplify writing and reading this document, the different part numbers are not specified in text, illustrations, and tables. Everywhere the part number ES7010 appears, the information is valid for the ES7011 as well unless specifically noted otherwise. To use the ES7011, a license from Dolby Laboratories Licensing Corporation is required.
