

PRELIMINARY DATA SHEET

SKY65009: 250 – 2500 MHz Linear Power Amplifier Driver

Applications

- UHF television
- TETRA radio
- GSM450, GSM480, and GSM750
- AMPS, PCS, DCS, 2.5G, 3G
- ISM band transmitters
- Fixed WCS
- 802.11b/g WLANs

Features

- Wideband frequency range: 250 to 2500 MHz
- High linearity: OIP3 > +44 dBm, P1dB > +25 dBm
- High efficiency: PAE 42%
- High gain: 20 dB
- Single DC supply, +3 V or +5 V
- On-chip bias circuit
- MCM (3-pin, 4 x 4 mm) or SOT-89 (4-pin 2.4 x 4.5 mm) Pb-free package (MSL3, 250 °C per JEDEC J-STD-0-20)

NEW

Skyworks offers lead (Pb)-free, RoHS (Restriction of Hazardous Substances) compliant packaging.

Figure 1. SKY65009-21 Pinout – 3-Pin MCM Package (Top View)

Figure 2. SKY65009-70LF Pinout – 4-Pin SOT-89 Package (Top View)

Description

Skyworks SKY65009 is a high performance, ultra-wideband Power Amplifier (PA) driver with superior output power, linearity, and efficiency. The high linearity and superior Adjacent Channel Power Rejection/Adjacent Channel Leakage Ratio (ACPR/ACLR) performance make the SKY65009 ideal for use in the driver stage of infrastructure transmit chains.

The SKY65009 is fabricated with Skyworks high reliability Heterojunction Bipolar Transistor (HBT) process. The device uses low-cost Surface-Mount Technology (SMT) in the form of a 3-pin, 4 x 4 mm Multi-Chip Module (MCM) package (-21 option) or an optional 2.4 x 4.5 mm Small Outline Transistor (SOT) package (-70LF option). The device packages and pinouts are shown in Figures 1 and 2. A functional block diagram is provided in Figure 3.

**Figure 3. SKY65009 Block Diagram**

Electrical and Mechanical Specifications

Signal pin assignments and functional pin descriptions for the SKY65009 are provided in Table 1. The absolute maximum ratings are provided in Table 2, and the recommended operating conditions in Table 3. Electrical characteristics for the SKY65009 are provided in Table 4.

Typical performance characteristics of the SKY65009 are illustrated in Figures 4 through 10. Package, and tape and reel dimensions for the 3-pin MCM are shown in Figures 14 and 15, respectively. Package, and tape and reel dimensions for the 4-pin SOT-89 are shown in Figures 16 and 17, respectively.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY65009 is rated to Moisture Sensitivity Level 3 (MSL3) at 250 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format. For packaging details, refer to the Skyworks Application Note, *Tape and Reel*, document number 101568.

Electrostatic Discharge (ESD) Sensitivity

The SKY65009 is a static-sensitive electronic device. Do not operate or store near strong electrostatic fields. Take proper ESD precautions.

Table 1. SKY65009 Signal Descriptions

Pin #	Name	Description
1	RF_IN	RF input
2	GND	Ground
3	RF_OUT	RF output
4 (SOT-89 package only)	GND	Ground

Table 2. SKY65009 Absolute Maximum Ratings
(T_A = +25 °C, unless otherwise noted)

Parameter	Symbol	Min	Typical	Max	Units
Supply voltage	VCC			6	V
RF output power	P _{OUT}			+26	dBm
Supply current	I _{CC}			300	mA
Power dissipation	P _D			1.1	W
Operating case temperature	T _C	–40		+85	°C
Storage temperature	T _{ST}	–55		+125	°C
Junction temperature	T _J			150	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal values.

Table 3. SKY65009 Recommended Operating Conditions

Parameter	Symbol	Min	Typical	Max	Units
Supply voltage	VCC		5	5.5	V
Frequency range	F	250		2500	MHz
Junction temperature	T _J			140	°C

Table 4. SKY65009 Electrical Characteristics (1 of 2)

Evaluation Board Description

The Skyworks SKY65009 Evaluation Board is used to test the performance of the SKY65009 power amplifier driver. An assembly drawing for the Evaluation Board is shown in Figure 11 and the layer detail is provided in Figure 12.

Circuit Design Configurations

The following design considerations are general in nature and must be followed regardless of final use or configuration.

1. Paths to ground should be made as short as possible.
2. The ground pad of the SKY65009 power amplifier has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Since the circuit board acts as the heat sink, it must shunt as much heat as possible from the amplifier. As such, design the connection to the ground pad to dissipate the maximum wattage produced to the circuit board. Multiple vias to the grounding layer are required.

NOTE: Junction temperature (T_J) of the device increases with a poor connection to the slug and ground. This reduces the lifetime of the device.

A suggested matching circuit is shown in Figure 13 with component values listed in Table 5 (SKY65009-21) and Table 6 (SKY65009-70LF).

Testing Procedure

Use the following procedure to set up the SKY65009 Evaluation Board for testing:

1. Connect a 5 V supply to VCC. If available, enable the current limiting function of the power supply to 240 mA.
2. Connect a signal generator to the RF signal input port. Set it to the desired RF frequency at a power level of -15 dBm or less to the Evaluation Board but do NOT enable the RF signal.
3. Connect a spectrum analyzer to the RF signal output port.
4. Enable the power supply.
5. Enable the RF signal.
6. Take measurements.

CAUTION: If any of the output signals exceed the rated maximum values, the SKY65009 Evaluation Board can be permanently damaged.
