## 1. GENERAL DESCRIPTION

The GG2033 is a Dots+Icon LCD module. It has a STN panel composed of 120 segments and 16 commons. The LCM can be easily accessed by microcontroller via parallel or series interface.

## 2. FEATURES

|                    |                            |
|--------------------|----------------------------|
| Display Mode       | Transflective and positive |
|                    | FSTN module                |
| Display Format     | dots+Icon                  |
| Input Data         | Serial data input from MPU |
| Multiplexing Ratio | 1/20 Duty                  |
| Bias               | 1/5 Bias                   |
| Viewing Direction  | 12 O'clock                 |
| Controller LSI     | S1D15714D00B00             |
| Backlight          | None                       |

## 3. MECHANICAL SPECIFICATION

| Item                | Specifications          | Unit |
|---------------------|-------------------------|------|
| Dimensional outline | 88.6 x 33.0 x 2.85(max) | mm   |
| Resolution          | 120segs x 16coms        | ---  |
| Active area         | 82.6(W) x 19.5(H)       | mm   |
| Dots pitch          | -----                   | mm   |
| Dots size           | -----                   | mm   |

## 4. MECHANICAL DIMENSION

## 5. MAXIMUM RATINGS

| Item                  | Symbol            | Min  | Max          | Unit | Note |
|-----------------------|-------------------|------|--------------|------|------|
| Supply voltage        | $V_{DD} - V_{SS}$ | -0.3 | 6.0          | V    |      |
|                       | $V_{LCD}$         | -0.3 | 18.0         | V    |      |
| Input Voltage         | $V_{IN}$          | -0.3 | $V_{DD}+0.3$ | V    |      |
| Operating temperature | $T_{OPR}$         | -25  | +70          | °C   |      |
| Storage temperature   | $T_{STR}$         | -35  | +80          | °C   |      |
| Humidity              | ---               | ---  | 90           | %RH  |      |

## 6. ELECTRICAL CHARACTERISTICS

| Item                                |         | Symbol    | Condition  | Min.        | Typ. | Max.        | Unit |
|-------------------------------------|---------|-----------|--|-------------|------|-------------|------|
| Supply Voltage                      | Logic   | $V_{DD}$  | ---  | ---         | 5.0  | ---         | V    |
| Input Voltage                       | H level | $V_{IH}$  | ---  | $0.8V_{DD}$ | ---  | $V_{DD}$    | V    |
|                                     | L level | $V_{IL}$  |  | $V_{SS}$    | ---  | $0.2V_{DD}$ |      |
| Current Consumption<br>(LCD DRIVER) |         | $I_{DD}$  | $V_{DD}=5.0V$ ;<br>$V_{LCD}=7.0V, T_{amb}=25^{\circ}C$ ; | ---         | ---  | 3.0         | mA   |
| LCD Driving Voltage                 |         | $V_{LCD}$ | Bias=1/5<br>$V_{LCD}=V_0-V_{SS}$                         | ---         | 7.0  | ---         | V    |

## 7. MODULE FUNCTION DESCRIPTION

### 7.1. PIN DESCRIPTION

| Pin No. | Symbol | Description   |
|---------|--------|---|
| 1       | /CS    | Chip Select Signal, Low is Active   |
| 2       | /RES   | Reset Signal, Low is Active   |
| 3       | A0     | Data/Command Select Signal, “H”:Data; “L”:Command   |
| 4       | SCL    | Serial Colok Input  |
| 5       | SDA    | Serial Data Input   |
| 6       | VDI    | Power Supply Pin, Connect a Capacitor to VSS  |
| 7       | VSS    | Power Supply for Ground   |
| 8       | VDD    | Power Supply for Positive   |
| 9       | VDD2   | Power Supply for Boosting Circuit, Connect to VDD   |
| 10      | VOUT   | Output the Step-up, Connect a Capacitor to VDD or VDD2  |
| 11      | V3     | LCD Driving Voltage, the following order must be maintained:<br>V3 V2 V1 VC MV1 MV2 MV3(=VSS)<br>MV3 is Short Circuited with MV3 inside the IC Chip |
| 12      | V2     |   |
| 13      | V1     |   |
| 14      | VC     |   |
| 15      | MV1    |   |
| 16      | MV2    |   |

## 7.2 TIMING CHARACTERISTICS

### 1.SYSTEM BUS READ/WRITE CHARACTERISTIC

Serial interface

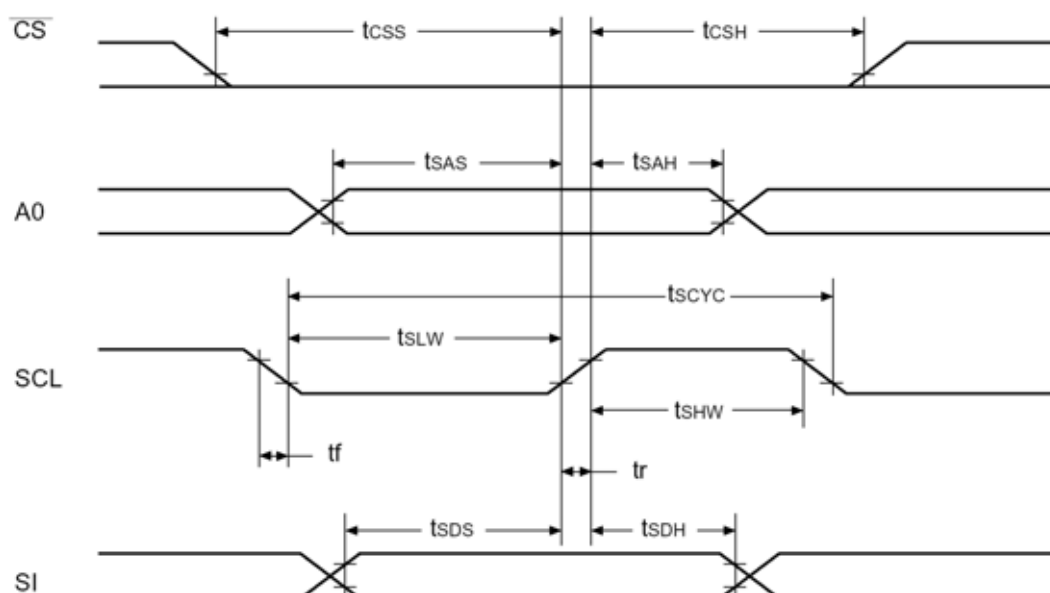

Figure 10.3

Table 10.3

[VDD = 2.7V to 5.5V, Ta = -40 to +85°C]

| Parameter            | Signal | Symbol     | Condition | Specified value |      | Unit |
|----------------------|--------|------------|-----------|-----------------|------|------|
|                      |        |            |           | Min.            | Max. |      |
| Serial clock period  | SCL    | $t_{SCYC}$ | —         | 250             | —    | ns   |
| SCL HIGH pulse width |        | $t_{SHW}$  | —         | 100             | —    |      |
| SCL LOW pulse width  |        | $t_{SLW}$  | —         | 100             | —    |      |
| Address setup time   | A0     | $t_{SAS}$  | —         | 150             | —    |      |
| Address hold time    |        | $t_{SAH}$  | —         | 150             | —    |      |
| Data setup time      | SI     | $t_{SDS}$  | —         | 200             | —    |      |
| Data hold time       |        | $t_{SDH}$  | —         | 100             | —    |      |
| CS-SCL time          | CS     | $t_{CSS}$  | —         | 150             | —    |      |
|                      |        | $t_{CSH}$  | —         | 150             | —    |      |

\*1. Input signal rise and fall time ( $t_r$ ,  $t_f$ ) must not exceed 15 ns.

\*2. Timing is entirely specified with reference to 20% or 80% of VDD.

## 2. RESET TIMING

Fig. 10.5

Table 10.5

[V<sub>DD</sub> = 2.7V to 5.5V, T<sub>a</sub> = -40 to +85°C]

| Parameter             | Signal | Symbol          | Condition | Specified value |      |      | Unit |
|-----------------------|--------|-----------------|-----------|-----------------|------|------|------|
|                       |        |                 |           | Min.            | Typ. | Max. |      |
| Reset time            | —      | t <sub>R</sub>  | —         | —               | —    | 1000 | μs   |
| Reset LOW pulse width | RES    | t <sub>RW</sub> | —         | 1000            | —    | —    |      |

\*1. Timing is entirely specified with reference to 20% or 80% of V<sub>DD</sub>.

### 3. DISPLAY CONTROL TIMING

Fig. 10.4

**Table 10.4 Output Timing**

[VDD = 2.7V to 5.5V, Ta = -40 to +85°C]

| Parameter         | Signal | Symbol    | Condition | Specified value |      |      | Unit |
|-------------------|--------|-----------|-----------|-----------------|------|------|------|
|                   |        |           |           | Min.            | Typ. | Max. |      |
| FR delay time     | FR     | tDFR      | CL = 50pF | —               | 60   | 200  | ns   |
| F1, F2 delay time | F1, F2 | tDF1, tF2 |           | —               | 60   | 200  | ns   |
| SYNC delay time   | SYNC   | tDSYNC    |           | —               | 60   | 200  | ns   |

**Table 10.5 Input Timing**

[VDD = 2.7V to 5.5V, Ta = -40 to +85°C]

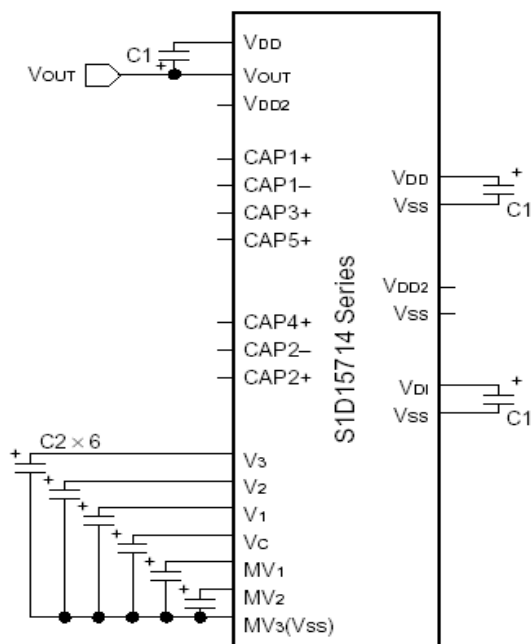

| Parameter              | Signal | Symbol    | Condition | Specified value |      |      | Unit |
|------------------------|--------|-----------|-----------|-----------------|------|------|------|
|                        |        |           |           | Min.            | Typ. | Max. |      |
| FR delay time          | FR     | tDFR      |           | -1.0            | —    | 1.0  | μs   |
| F1, F2 delay time      | F1, F2 | tDF1, tF2 |           | -1.0            | —    | 1.0  | μs   |
| SYNC delay time        | SYNC   | tDSYNC    |           | -1.0            | —    | 1.0  | μs   |
| Low-level pulse width  | CL     | tWLCL     |           | 1.0             | —    | —    | μs   |
| High-level pulse width |        | tWHCL     |           | 1.0             | —    | —    | μs   |

\*1. Timing is entirely specified with reference to 20% or 80% of VDD.

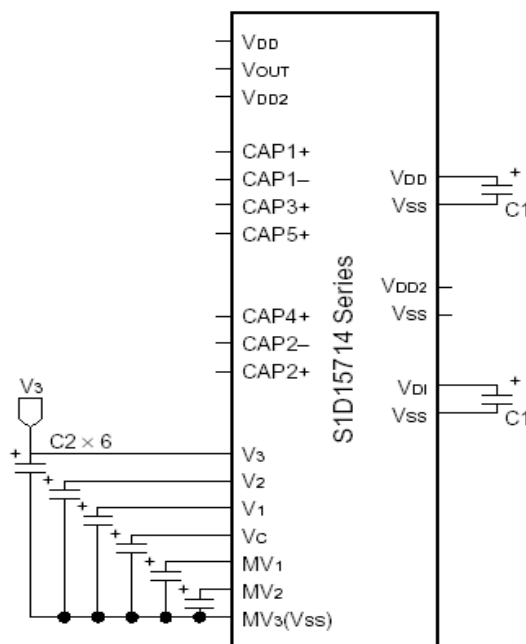

## 7.3 APPLICATION OF LCM

### ■Reference circuit

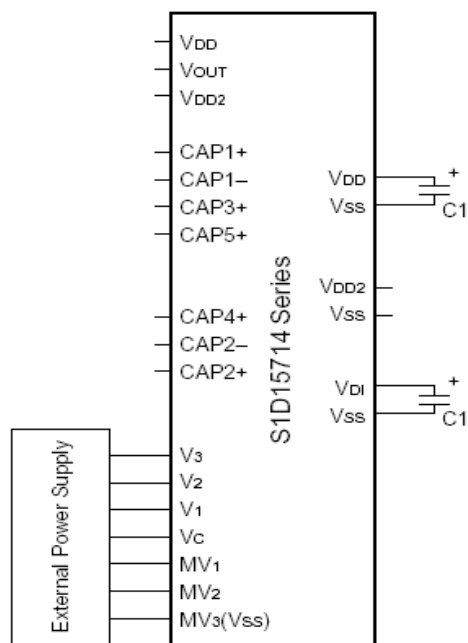

V<sub>3</sub> adjusting circuit and LCDV circuit  
V<sub>OUT</sub> external input (C: 9 units)

LCDV circuit only  
V<sub>3</sub> external input (C: 8 units)

External power supply only  
External input (C: 2 unit)

Connection Example of Smoothing Capacitor for Liquid Crystal Drive Voltage  
In addition to the connections shown in the above ① to ③, the following connection is also possible.

## 7.4 TABLE OF COMMAND

| 6   | Temperature Cycling<br>Non-Operating        | -20°C (30Min )↔ 600°C (30Min)<br>10 CYCLES |   |

Notes: Judgments should be made after exposure in room temperature for two hours.

## **10. PRECAUTIONS FOR USING LCD MODULES**

### **10.1. HANDLING PRECAUTIONS**

- (1) The display panel is made of glass. Do not subject it to a mechanical shock or impact by dropping it.
- (2) If the display panel is damaged and the liquid crystal substance leaks out, be sure not to get any in your mouth. If the substance contacts your skin or clothes, wash it off using soap and water.
- (3) Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- (4) The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- (5) If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten a cloth with one of the following solvents:
  - Isopropyl alcohol
  - Ethyl alcohol
- (6) Solvents other than those above mentioned may damage the polarizer.  
Especially, do not use the following:
  - Water
  - Ketone
  - Aromatic solvents
- (7) Extra care to minimize corrosion of the electrode. Water droplets, moisture condensation or a current flow in a high-humidity environment accelerates corrosion of the electrode.
- (8) Install the LCD Module by using the mounting holes. When mounting the LCD Module, make sure it is free of twisting, warping and distortion. In particular, do not forcibly pull or bend the I/O cable or the backlight cable.
- (9) Do not attempt to disassemble or process the LCD Module.
- (10) NC terminal should be open. Do not connect anything.
- (11) If the logic circuit power is off, do not apply the input signals.
- (12) To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
  - Be sure to ground the body when handling the LCD Module.
  - Tools required for assembling, such as soldering irons, must be properly grounded.
  - To reduce the amount of static electricity generated, do not conduct assembling and other work under dry conditions.

-The LCD Module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

## **10.2. STORAGE CONDITIONS**

When storing, avoid the LCD module to be exposed to direct sunlight of fluorescent lamps. For stability, to keep it away from high temperature and high humidity environment (The best condition is :  $23\pm5^{\circ}\text{C}$ ,  $45\pm20\%\text{RH}$ ). ESD protection is necessary for long-term storage also.

## **10.3. OTHERS**

Liquid crystals solidify under low temperature (below the storage temperature range) leading to defective orientation or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subject to a low temperature.

If the LCD Module have been operating for a long time showing the same display patterns the display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. A normal operating status can be recovered by suspending use for some time. It should be noted that this phenomenon does not adversely affect performance reliability.

To minimize the performance degradation of the LCD Module resulting from destruction caused by static electricity etc. exercise care to avoid holding the following sections when handling the modules.

- Exposed area of the printed circuit board.
- Terminal electrode sections.

## **11. Using LCD modules**

### **11.1 LIQUID CRYSTAL DISPLAY MODULES**

LCD is composed of glass and polarizer. Pay attention to the following items when handling.

- (1) Please keep the temperature within specified range for use and storage. Polarization degradation, bubble generation or polarizer peel-off may occur with high temperature and high humidity.
- (2) Do not touch, push or rub the exposed polarizers with anything harder than a HB pencil lead (glass, tweezers, etc).
- (3) N-hexane is recommended for cleaning the adhesives used to attach front/rear polarizers and reflectors made of organic substances, which will be damaged by chemicals such as acetone, toluene, ethanol and isopropyl alcohol.
- (4) When the display surface becomes dusty, wipe gently with absorbent cotton or other soft material like chamois soaked in petroleum ether. Do not scrub hard to avoid damaging the display surface.
- (5) Wipe off saliva or water drops immediately, contact with water over a long period of time may cause deformation or color fading.
- (6) Avoid contacting oil and fats.
- (7) Condensation on the surface and contact with terminals due to cold will damage, stain or polarizers. After products are tested at low temperature they must be warmed up in a container before coming in contact with room temperature air.
- (8) Do not put or attach anything on the display area to avoid leaving marks on.
- (9) Do not touch the display with bare hands. This will stain the display area and degrade insulation between terminals (some cosmetics are determinate to the polarizers).
- (10) As glass is fragile, it tends to become chipped during handling especially on the edges. Please avoid dropping or jarring.

### **11.2 INSTALLING LCD MODULE**

Attend to the following items when installing the LCM.

- (1) Cover the surface with a transparent protective plate to protect the polarizer and LC cell.
- (2) When assembling the LCM into other equipment, the spacer to the bit between the LCM and the fitting plate should have enough height to avoid causing stress to the module surface, refer to the individual specifications for measurements. The measurement tolerance should be  $\pm 0.1\text{mm}$ .

### **11.3 ELECTRO-STATIC DISCHARGE CONTROL**

Since this module uses a CMOS LSI, the same careful attention should be paid for electrostatic discharge as for an ordinary CMOS IC.

- (1) Make certain that you are grounded when handing LCM.
- (2) Before removing LCM from its packing case or incorporating it into a set, be sure the module and your body have the same electric potential.
- (3) When soldering the terminal of LCM, make certain the AC power source for the soldering iron does not leak.
- (4) When using an electric screwdriver to attach LCM, the screwdriver should be of ground potentiality to minimize as much as possible any transmission of electromagnetic waves produced sparks coming from the commutator of the motor.
- (5) As far as possible, make the electric potential of your work clothes and that of the workbenches to the ground potential.
- (6) To reduce the generation of electro-static discharge, be careful that the air in the work is not too dried. A relative humidity of 50%-60% is recommended.

## 11.4 PRECAUTIONS FOR OPERATION

- (1) Viewing angle varies with the change of liquid crystal driving voltage ( $V_o$ ). Adjust  $V_o$  to show the best contrast.
- (2) Driving the LCD in the voltage above the limit will shorten its lifetime.
- (3) Response time is greatly delayed at temperature below the operating temperature range. However, this does not mean the LCD will be out of the order. It will recover when it returns to the specified temperature range.
- (4) If the display area is pushed hard during operation, the display will become abnormal. However, it will return to normal if it is turned off and then on.
- (5) Condensation on terminals can cause an electrochemical reaction disrupting the terminal circuit. Therefore, this product must be used and stored within the specified condition of  $23\pm5^{\circ}\text{C}$ ,  $45\pm20\%\text{RH}$ .
- (6) When turning the power on, input each signal after the positive/negative voltage becomes stable.

## 11.5 SAFETY

- (1) It is recommended to crush damaged or unnecessary LCDs into pieces and wash them off with solvents such as acetone and ethanol, which should later be burned.
- (2) If any liquid leaks out of a damaged glass cell and comes in contact with the hands, wash off thoroughly with soap and water.

## 12. REVISION HISTORY

| Version | Revise record               | Date     |
|---------|-----------------------------|----------|
| 1.0     | Original version            | 05-01-01 |
| 2.0     | Change specification format | 05-11-21 |
|         |                             |          |

## SAMPLE APPROVED REPORT

### (样品确认单)

|  |                   |
|--|-------------------|
| SAMPLE MODEL NO. (样品型号)  | GG2033            |
| SAMPLE SERIES NUMBER NO. (样品序号)  |                   |
| SAMPLE QUANTITY (样品数量)   |                   |
| COLOR/TYPE (底色/类型)   | STN/NEGATIVE      |
| VIEWING DIRECTION (视角)   | 6:00              |
| DRIVING METHOD (驱动参数)  | 1/65Duty, 1/9Bias |
| LOGIC VOLTAGE (IC 工作电压)  | 5.0V              |
| LCD VOP (LCD 驱动电压)   | 7.0V              |
| OPERATING TEMP. (操作温度)   | -25~70            |
| STORAGE TEMP. (储存温度)   | -35~80            |
| POLARIZER----FRONT (首偏光片)  | TRANSMISSIVE      |
| POLARIZER----BACK (后偏光片)   | TRANSMISSIVE      |
| CONTROLLER/DRIVER IC(控制/驱动 IC)   | S1D15714D00B00    |
| BACKLIGHT COLOR/TYPE (背光源类型/颜色)  | NONE              |
| DRAWING REV/NO./QUANTITY (图纸版本/数量)   |                   |
| SPECIFICATION (规格书 份数)   |                   |
| REMARKS :<br>(备注)  |                   |
