

## SBS 1.1-COMPLIANT GAS GAUGE and PROTECTION ENABLED WITH IMPEDANCE TRACK™

### FEATURES

- **Next Generation Patented Impedance Track™ Technology Accurately Measures Available Charge in Li-Ion and Li-Polymer Batteries**
  - **Better Than 1% Error Over Lifetime of the Battery**
- **Supports the Smart Battery Specification SBS V1.1**
- **Flexible Configuration for 2 to 4 Series Li-Ion and Li-Polymer Cells**
- **Powerful 8-Bit RISC CPU With Ultra-Low Power Modes**
- **Full Array of Programmable Protection Features**
  - **Voltage, Current, and Temperature**
- **Supports SHA-1 Authentication**
- **Complete Battery Protection and Gas Gauge Solution in one Package**
- **Small 44-Pin TSSOP (DBT) package**

### APPLICATIONS

- **Notebook PCs**
- **Medical and Test Equipment**
- **Portable Instrumentation**

### DESCRIPTION

The bq20z95 SBS-compliant gas gauge and protection IC is a single IC solution designed for battery-pack or in-system installation. The bq20z95 measures and maintains an accurate record of available charge in Li-ion or Li-polymer batteries using its integrated high-performance analog peripherals, monitors capacity change, battery impedance, open-circuit voltage, and other critical parameters of the battery pack as well and reports the information to the system host controller over a serial-communication bus. Together with the integrated analog front-end (AFE) short-circuit and overload protection, the bq20z95 maximizes functionality and safety while minimizing external component count, cost, and size in smart battery circuits.

The implemented Impedance Track™ gas gauging technology continuously analyzes the battery impedance, resulting in superior gas-gauging accuracy. This enables remaining capacity to be calculated with discharge rate, temperature, and cell aging all accounted for during each stage of every cycle with high accuracy.

### AVAILABLE OPTIONS

T <sub>A</sub>	PACKAGE <sup>(1)</sup>	
	44-PIN TSSOP (DBT) Tube	44-PIN TSSOP (DBT) Tape and Reel
–40°C to 85°C	bq20z95DBT <sup>(2)</sup>	bq20z95DBTR <sup>(3)</sup>

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at [www.ti.com](http://www.ti.com).

(2) A single tube quantity is 50 units.

(3) A single reel quantity is 2000 units

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Impedance Track is a trademark of Texas Instruments.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## TERMINAL FUNCTIONS

TERMINAL NO.	NAME	I/O <sup>(1)</sup>	DESCRIPTION
1	DSG	O	High side N-chan discharge FET gate drive
2	PACK	IA, P	Battery pack input voltage sense input. It also serves as device wake up when device is in shutdown mode.
3	VCC	P	Positive device supply input. Connect to the center connection of the CHG FET and DSG FET to ensure device supply either from battery stack or battery pack input
4	ZVCHG	O	P-chan pre-charge FET gate drive
5	GPOD	OD	High voltage general purpose open drain output. Can be configured to be used in pre-charge condition
6	PMS	I	Pre-charge mode setting input. Connect to PACK to enable 0v pre-charge using charge FET connected at CHG pin. Connect to VSS to disable 0V pre-charge using charge FET connected at CHG pin.
7	VSS	P	Negative device power supply input. Connect all VSS pins together for operation of device
8	REG33	P	3.3V regulator output. Connect at least a 2.2μF capacitor to REG33 and VSS
9	TOUT	P	Thermistor bias supply output
10	VCELL+	-	Internal cell voltage multiplexer and amplifier output. Connect a 0.1μF capacitor to VCELL+ and VSS
11	ALERT	I/OD	Alert output. In case of short circuit condition, overload condition and watchdog time out this pin will be triggered.
12	NC	-	Not connected
13	TS1	IA	Temperature sensor 1 input
14	TS2	IA	Temperature sensor 2 input
15	PRES	I/OD	System / Host present input. Pull up to TOUT
16	PFIN	I/OD	Fuse blow detection input
17	SAFE	I/OD	blow fuse signal output
18	SMBD	I/OD	SMBus data line
19	NC	-	Not connected
20	SMBC	I/OD	SMBus clock line
21	DISP	I/OD	Display enable input
22	VSS	P	Negative device power supply input. Connect all VSS pins together for operation of device
23	LED1	I	LED 1 current sink input
24	LED2	I	LED 2 current sink input
25	LED3	I	LED 3 current sink input
26	LED4	I	LED 4 current sink input
27	LED5	I	LED 5 current sink input
28	GSRP	IA	Coulomb counter differential input. Connect to one side of the sense resistor
29	GSRN	IA	Coulomb counter differential input. Connect to one side of the sense resistor
30	MRST	I	Reset input for internal CPU core. connect to RESET for correct operation of device
31	VSS	P	Negative device power supply input. Connect all VSS pins together for operation of device
32	REG25	P	2.5V regulator output. Connect at least a 1μF capacitor to REG25 and VSS
33	RBI	P	RAM backup input. Connect a capacitor to this pin and VSS to protect loss of RAM data in case of short circuit condition
34	VSS	P	Negative device power supply input. Connect all VSS pins together for operation of device
35	RESET	O	Reset output. Connect to MRST.
36	ASRN	IA	Short circuit and overload detection differential input. Connect to sense resistor
37	ASRP	IA	Short circuit and overload detection differential input. Connect to sense resistor
38	VC5	IA, P	Cell voltage sense input and cell balancing input for the negative voltage of the bottom cell in cell stack.
39	VC4	IA, P	Cell voltage sense input and cell balancing input for the positive voltage of the bottom cell and the negative voltage of the second lowest cell in cell stack.

(1) I = Input, IA = Analog input, I/O = Input/output, I/OD = Input/Open-drain output, O = Output, OA = Analog output, P = Power

**TERMINAL FUNCTIONS (continued)**

TERMINAL		I/O <sup>(1)</sup>	DESCRIPTION
NO.	NAME		
40	VC3	IA, P	Cell voltage sense input and cell balancing input for the positive voltage of the second lowest cell in cell stack and the negative voltage of the second highest cell in 4 cell applications.
41	VC2	IA, P	Cell voltage sense input and cell balancing input for the positive voltage of the second highest cell and the negative voltage of the highest cell in 4 cell applications. Connect to VC3 in 2 cell stack applications
42	VC1	IA, P	Cell voltage sense input and cell balancing input for the positive voltage of the highest cell in cell stack in 4 cell applications. Connect to VC2 in 3 or 2 cell stack applications
43	BAT	I, P	Battery stack voltage sense input
44	CHG	O	High side N-chan charge FET gate drive

**Absolute Maximum Ratings**Over Operating Free-Air Temperature (unless otherwise noted) <sup>(1)</sup>

	DESCRIPTION	PIN	UNIT
V <sub>SS</sub>	Supply voltage range	VBAT, VCC	–0.3 V to 34 V
		PACK, PMS	–0.3 V to 34 V
		VC(n)-VC(n+1); n = 1, 2, 3, 4	–0.3 V to 8.5 V
		VC1, VC2, VC3, VC4	–0.3 V to 34 V
		VC5	–0.3 V to 1 V
V <sub>IN</sub>	Input voltage range	PFIN, SMBD, SMBC, LED1, LED2, LED3, LED4, LED5, DISP	–0.3 V to 6 V
		TS1, TS2, SAFE, VCELL+, PRES, ALERT	–0.3 V to V <sub>(REG25)</sub> + 0.3 V
		MRST, GSRN, GSRP, RBI	–0.3 V to V <sub>(REG25)</sub> + 0.3 V
		ASRN, ASRP	–1 V to 1 V
V <sub>OUT</sub>	Output voltage range	DSG, CHG, GPOD	–0.3 V to 34 V
		ZVCHG	–0.3 V to V <sub>(BAT)</sub>
		TOUT, ALERT, REG33	–0.3 V to 6 V
		RESET	–0.3 V to 7 V
		REG25	–0.3 V to 2.75 V
I <sub>SS</sub>	Maximum combined sink current for input pins	PRES, PFIN, SMBD, SMBC, LED5, LED4, LED3, LED2, LED1	50 mA
T <sub>A</sub>	Operating free-air temperature range		–40°C to 85°C
T <sub>F</sub>	Functional temperature		–40°C to 100°C
T <sub>stg</sub>	Storage temperature range		–65°C to 150°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

PARAMETER		PIN	MIN	NOM	MAX	UNIT
V <sub>SS</sub>	Supply voltage	VCC, VBAT	4.5		25	V
V <sub>(STARTUP)</sub>	Minimum startup voltage	VCC, BAT, PACK	5.5			V
V <sub>IN</sub>	Input Voltage Range	VC(n)-VC(n+1); n = 1,2,3,4	0		5	V
		VC1, VC2, VC3, VC4	0		V <sub>SUP</sub>	V
		VC5	0		0.5	V
		ASRN, ASRP	-0.5		0.5	V
		PACK, PMS	0		25	V
V <sub>(GPOD)</sub>	Output Voltage Range	GPOD	0		25	V
A <sub>(GPOD)</sub>	Drain Current <sup>(1)</sup>	GPOD			1	mA
C <sub>(REG25)</sub>	2.5V LDO Capacitor	REG25	1			μF
C <sub>(REG33)</sub>	3.3V LDO Capacitor	REG33	2.2			μF
C <sub>(VCELL+)</sub>	Cell Voltage Output Capacitor	VCELL+	0.1			μF
C <sub>(PACK)</sub>	PACK input block resistor <sup>(2)</sup>	PACK	1			kΩ

(1) Use an external resistor to limit the current to GPOD to 1mA in high voltage application.

(2) Use an external resistor to limit the inrush current PACK pin required.

## Electrical Characteristics

over operating free-air temperature range (unless otherwise noted), T<sub>A</sub> = -40°C to 85°C, V<sub>(REG25)</sub> = 2.41 V to 2.59 V, V<sub>(BAT)</sub> = 14 V, C<sub>(REG25)</sub> = 1 μF, C<sub>(REG33)</sub> = 2.2 μF; typical values at T<sub>A</sub> = 25°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>SUPPLY CURRENT</b>

(3) Full-scale reference

(4) Post-calibration performance and no I/O changes during conversion with SRN as the ground reference

(5) Uncalibrated performance. This gain error can be eliminated with external calibration.

(6) The A/D input is a switched-capacitor input. Since the input is switched, the effective input resistance is a measure of the average resistance.

(7) Post-calibration performance

(8) Reference voltage for the coulomb counter is typically  $V_{\text{ref}}/3.969$  at  $V_{(\text{REG25})} = 2.5\text{ V}$ ,  $T_A = 25^{\circ}\text{C}$ .

(9) Uncalibrated performance. This gain error can be eliminated with external calibration.

(10) The CC input is a switched capacitor input. Since the input is switched, the effective input resistance is a measure of the average resistance.

(11) -53.7 LSB/ $^{\circ}\text{C}$

(12) The frequency error is measured from 4.194 MHz.

(13) The frequency drift is included and measured from the trimmed frequency at  $V_{(\text{REG25})} = 2.5\text{ V}$ ,  $T_A = 25^{\circ}\text{C}$

(14) The startup time is defined as the time it takes for the oscillator output frequency to be  $\pm 3\%$

(15) The frequency error is measured from 32.768 kHz.

## Data Flash Characteristics Over Recommended Operating Temperature and Supply Voltage

Typical Values at  $T_A = 25^\circ\text{C}$  and  $V_{\text{REG25}} = 2.5\text{ V}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Data retention	See <sup>(1)</sup>	10			Years
Flash programming write-cycles		20k			Cycles
$t_{\text{(ROWPROG)}}$ Row programming time				2	ms
$t_{\text{(MASSERASE)}}$ Mass-erase time				200	ms
$t_{\text{(PAGEERASE)}}$ Page-erase time				20	ms
$I_{\text{(DDPROG)}}$ Flash-write supply current			5	10	mA
$I_{\text{(DDERASE)}}$ Flash-erase supply current			5	10	mA
<b>RAM BACKUP</b>					
$I_{\text{(RB)}}$ RB data-retention input current	$V_{\text{(RBI)}} > V_{\text{(RBI)MIN}}, V_{\text{REG25}} < V_{\text{IT-}}, T_A = 85^\circ\text{C}$		1000	2500	nA
	$V_{\text{(RBI)}} > V_{\text{(RBI)MIN}}, V_{\text{REG25}} < V_{\text{IT-}}, T_A = 25^\circ\text{C}$		90	220	
$V_{\text{(RB)}}$ RB data-retention input voltage <sup>(1)</sup>		1.7			V

(1) Specified by design. Not production tested.

## SMBus Timing Characteristics

$T_A = -40^\circ\text{C}$  to  $85^\circ\text{C}$  Typical Values at  $T_A = 25^\circ\text{C}$  and  $V_{\text{REG25}} = 2.5\text{ V}$  (Unless Otherwise Noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$f_{\text{(SMB)}}$ SMBus operating frequency	Slave mode, SMBC 50% duty cycle	10		100	kHz
$f_{\text{(MAS)}}$ SMBus master clock frequency	Master mode, No clock low slave extend		51.2		kHz
$t_{\text{(BUF)}}$ Bus free time between start and stop (see Figure 1)		4.7			$\mu\text{s}$
$t_{\text{(HD:STA)}}$ Hold time after (repeated) start (see Figure 1)		4			$\mu\text{s}$
$t_{\text{(SU:STA)}}$ Repeated start setup time (see Figure 1)		4.7			$\mu\text{s}$
$t_{\text{(SU:STO)}}$ Stop setup time (see Figure 1)		4			$\mu\text{s}$
$t_{\text{(HD:DAT)}}$ Data hold time (see Figure 1)	Receive mode	0			ns
	Transmit mode	300			
$t_{\text{(SU:DAT)}}$ Data setup time (see Figure 1)		250			ns
$t_{\text{(TIMEOUT)}}$ Error signal/detect (see Figure 1)	See <sup>(1)</sup>	25		35	$\mu\text{s}$
$t_{\text{(LOW)}}$ Clock low period (see Figure 1)		4.7			$\mu\text{s}$
$t_{\text{(HIGH)}}$ Clock high period (see Figure 1)	See <sup>(2)</sup>	4		50	$\mu\text{s}$
$t_{\text{(LOW:SEXT)}}$ Cumulative clock low slave extend time	See <sup>(3)</sup>			25	$\mu\text{s}$
$t_{\text{(LOW:MEXT)}}$ Cumulative clock low master extend time (see Figure 1)	See <sup>(4)</sup>			10	$\mu\text{s}$
$t_f$ Clock/data fall time	See <sup>(5)</sup>			300	ns
$t_r$ Clock/data rise time	See <sup>(6)</sup>			1000	ns

(1) The bq8040 times out when any clock low exceeds  $t_{\text{(TIMEOUT)}}$ .

(2)  $t_{\text{(HIGH)}}$ , Max, is the minimum bus idle time. SMBC = SMBD = 1 for  $t > 50\text{ ms}$  causes reset of any transaction involving bq8040 that is in progress. This specification is valid when the NC\_SMB control bit remains in the default cleared state (CLK[0]=0).

(3)  $t_{\text{(LOW:SEXT)}}$  is the cumulative time a slave device is allowed to extend the clock cycles in one message from initial start to the stop.

(4)  $t_{\text{(LOW:MEXT)}}$  is the cumulative time a master device is allowed to extend the clock cycles in one message from initial start to the stop.

(5) Rise time  $t_r = \text{VILMAX} - 0.15$  to  $(\text{VIHMIN} + 0.15)$

(6) Fall time  $t_f = 0.9V_{\text{DD}}$  to  $(\text{VILMAX} - 0.15)$

### Figure 1. SMBus Timing Diagram

## FEATURE SET

### Primary (1st Level) Safety Features

The bq20z95 supports a wide range of battery and system protection features that can easily be configured. The primary safety features include:

- Cell over/under voltage protection
- Charge and Discharge over current
- Short Circuit
- Charge and Discharge Over temperature
- AFE Watchdog

### Secondary (2nd Level) Safety Features

The secondary safety features of the bq20z95 can be used to indicate more serious faults via the SAFE (pin 7). This pin can be used to blow an in-line fuse to permanently disable the battery pack from charging or discharging. The secondary safety protection features include:

- Safety over voltage
- Safety over current in Charge and Discharge
- Safety over temperature in Charge and Discharge
- Charge FET and 0 Volt Charge FET fault
- Discharge FET fault
- AFE communication fault

### Charge Control Features

The bq20z95 charge control features include:

- Reports the appropriate charging current needed for constant current charging and the appropriate charging voltage needed for constant voltage charging to a smart charger using SMBus broadcasts.
- Determines the chemical state of charge of each battery cell using Impedance Track™ and can reduce the charge difference of the battery cells in fully charged state of the battery pack gradually using cell balancing algorithm during charging. This prevents fully charged cells from overcharging and causing excessive degradation and also increases the usable pack energy by preventing premature charge termination
- Supports pre-charging/zero-volt charging
- Support fast charging
- Supports charge inhibit and charge suspend if battery pack temperature is out of temperature range
- Reports charging fault and also indicate charge status via charge and discharge alarms.

### Gas Gauging

The bq20z95 uses the Impedance Track™ Technology to measure and calculate the available charge in battery cells. The achievable accuracy is better than 1% error over the lifetime of the battery and there is no full charge discharge learning cycle required.

See *Theory and Implementation of Impedance Track Battery Fuel-Gauging Algorithm* application note (SLUA364) for further details.

### Authentication

The bq20z95 supports authentication by the host using SHA-1.

## Power Modes

The bq20z95 supports 3 different power modes to reduce power consumption:

- In Normal Mode, the bq20z95 performs measurements, calculations, protection decisions and data updates in 1 second intervals. Between these intervals, the bq20z95 is in a reduced power stage.
- In Sleep Mode, the bq20z95 performs measurements, calculations, protection decisions and data update in adjustable time intervals. Between these intervals, the bq20z95 is in a reduced power stage. The bq20z95 has a wake function that enables exit from Sleep mode, when current flow or failure is detected.
- In Shutdown Mode the bq20z95 is completely disabled.

## CONFIGURATION

### Oscillator Function

The bq20z95 fully integrates the system oscillators. Therefore the bq20z95 requires no external components for this feature.

### System Present Operation

The bq20z95 checks the  $\overline{\text{PRES}}$  pin periodically (1s). If  $\overline{\text{PRES}}$  input is pulled to ground by external system, the bq20z95 detects this as system present.

## BATTERY PARAMETER MEASUREMENTS

The bq20z95 uses an integrating delta-sigma analog-to-digital converter (ADC) for current measurement, and a second delta-sigma ADC for individual cell and battery voltage, and temperature measurement.

### Charge and Discharge Counting

The integrating delta-sigma ADC measures the charge/discharge flow of the battery by measuring the voltage drop across a small-value sense resistor between the SR1 and SR2 pins. The integrating ADC measures bipolar signals from -0.25 V to 0.25 V. The bq20z95 detects charge activity when  $V_{\text{SR}} = V_{(\text{SRP})} - V_{(\text{SRN})}$  is positive and discharge activity when  $V_{\text{SR}} = V_{(\text{SRP})} - V_{(\text{SRN})}$  is negative. The bq20z95 continuously integrates the signal over time, using an internal counter. The fundamental rate of the counter is 0.65 nVh.

### Voltage

The bq20z95 updates the individual series cell voltages at one second intervals. The internal ADC of the bq20z95 measures the voltage, scales and calibrates it appropriately. This data is also used to calculate the impedance of the cell for the Impedance Track™ gas-gauging.

### Current

The bq20z95 uses the SRP and SRN inputs to measure and calculate the battery charge and discharge current using a 5 mΩ to 20 mΩ typ. sense resistor.

### Auto Calibration

The bq20z95 provides an auto-calibration feature to cancel the voltage offset error across SRN and SRP for maximum charge measurement accuracy. The bq20z95 performs auto-calibration when the SMBus lines stay low continuously for a minimum of 5 s.

### Temperature

The bq20z95 has an internal temperature sensor and 2 external temperature sensor inputs TS1 and TS2 used in conjunction with two identical NTC thermistors (default are Semitec 103AT) to sense the battery environmental temperature. The bq20z95 can be configured to use internal or up to 2 external temperature sensors.

## COMMUNICATIONS

The bq20z95 uses SMBus v1.1 with Master Mode and package error checking (PEC) options per the SBS specification.

### SMBus On and Off State

The bq20z95 detects an SMBus off state when SMBC and SMBD are logic-low for  $\geq 2$  seconds. Clearing this state requires either SMBC or SMBD to transition high. Within 1 ms, the communication bus is available.

### SBS Commands

## Application Schematic

Install these parts for various pre-charge options. See bq20295 EVM user guide. Default configuration has R23 & R24 NOT installed.

## PACKAGING INFORMATION

Orderable Device	Status <sup>(1)</sup>	Package Type	Package Drawing	Pins	Package Qty	Eco Plan <sup>(2)</sup>	Lead/Ball Finish	MSL Peak Temp <sup>(3)</sup>
BQ20Z95DBT	ACTIVE	SM8	DBT	44	40	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR
BQ20Z95DBTR	ACTIVE	SM8	DBT	44	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.

Following are URLs where you can obtain information on other Texas Instruments products and application solutions:
