Power Supply Supervisory Circuits

T-58-11-31

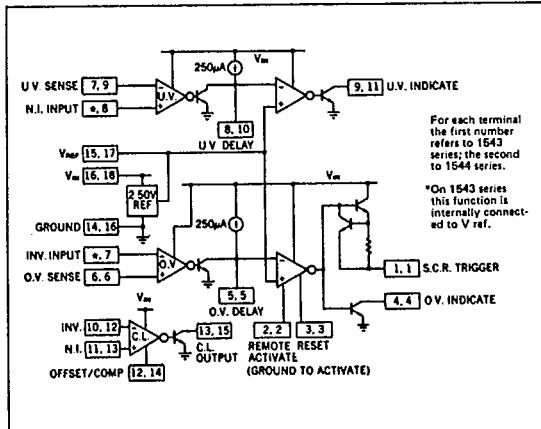

Section 2 - Pulse Width Modulators
IP1543, IP2543, IP3543, IP1544, IP2544, IP3544

Description

The IP1543, IP2543, IP3543 power supply supervisory circuits contain all the functions necessary to monitor and control the output of a sophisticated power supply system. Included on the chip are over-voltage (O.V.) sensing with externally programmable delay used to trigger an external SCR "Crowbar", under-voltage (U.V.) sensing with externally programmable delay used to sense either the power supply output or the line input voltage, a third op-amp/comparator with provision for external compensation and/or offset programming used for either current limiting or as an additional voltage monitor, and a voltage reference trimmed to $\pm 1\%$.

The IP1544, IP2544, IP3544 circuits contain all of the features of the IP1543 series and have the added flexibility of completely uncommitted inputs to the O.V. and U.V. sensing comparators so that voltages less than 2.5V may be monitored by dividing down the reference voltage.

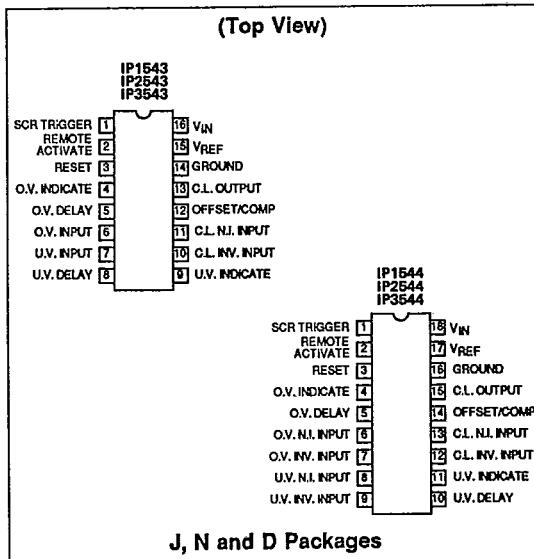

Block Diagram

Features

- 4.5 to 40V operation over full temperature range
- Reference voltage trimmed to 1% accuracy
- Includes over-voltage, under-voltage and current sensing
- Programmable time delays
- SCR "Crowbar" drive of 300mA
- Remote activation capability
- Optional over-voltage latch capability
- Uncommitted comparator inputs for low voltage sensing (IP1544 series only)

Connections

Absolute Maximum Ratings

Input Supply Voltage (V_{IN})	+40V	Power Dissipation at	
Sense Inputs	V_{IN}	$T_A = +25^\circ C$ (Note 2)	1000mW
SCR Trigger Current (Note 1)	Internally Limited	$T_C = +25^\circ C$ (Note 3)	2000mW
Indicator Output Voltage	+40V	Operating Junction Temperature	+150°C
Indicator Output Sink Current	50mA	Storage Temperature Range	-65°C to +150°C
		Lead Temperature (Soldering, 10 sec.)	+300°C

Absolute maximum ratings are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The electrical characteristics provide conditions for actual device operation.

Note 1. At higher input voltages, a dissipation limiting resistor, R_G , is required.

Note 2. Derate at 10mW/°C for ambient temperatures above +50°C.

Note 3. Derate at 16mW/°C for case temperatures above +25°C.

Recommended Operating Conditions (Note 4)

Input Supply Voltage (V_{IN})	+4.5 to +40V	Indicate Output Current	0 to 10mA
Current Limit Common Mode		Operating Ambient Temperature Range	
Input Voltage Range	0 to $V_{IN} - 3V$	IP1543, IP1544	-55°C to +125°C
Reference Load Current	0 to 10mA	IP2543, IP2544	-25°C to +85°C
		IP3543, IP3544	0°C to +70°C

Note 4. Range over which the device is functional and parameter limits guaranteed.

Electrical Characteristics

+ V_{IN} = +10V

Applications Information**Typical Application**

The values for the external components are determined as follows:

$$\text{Current limit input threshold, } V_{th} \approx \frac{1000}{R_1}$$

C_s is determined by the current loop dynamics

$$\text{Peak current to load, } I_p \approx \frac{V_{th}}{R_{sc}} + \frac{V_o}{R_{sc}} \left(\frac{R_2}{R_2 + R_3} \right)$$

$$\text{Short circuit current, } I_{sc} = \frac{V_{th}}{R_{sc}}$$

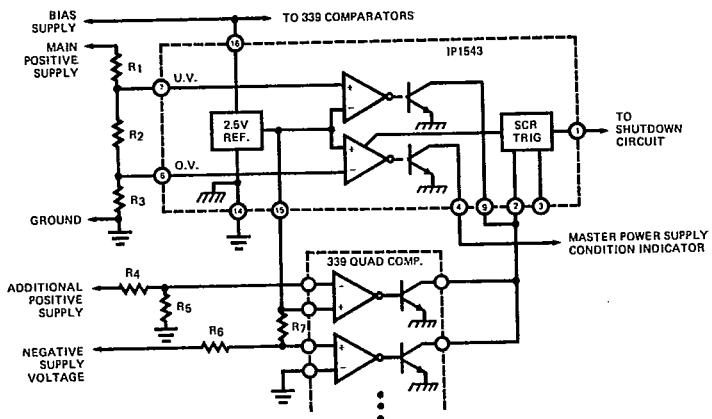

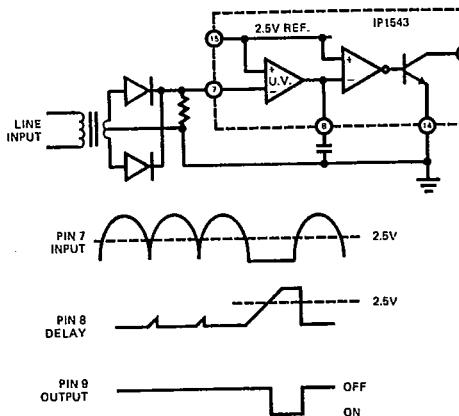

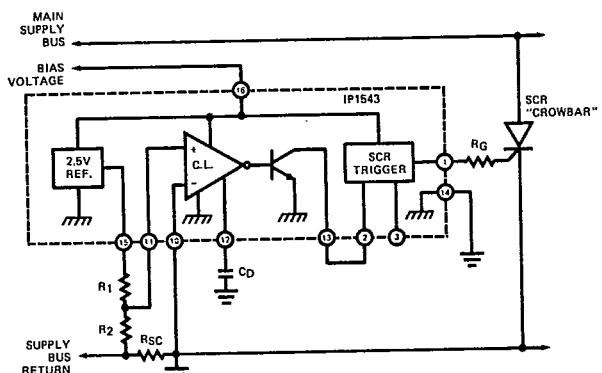

$$\text{Low output voltage limit, } V_o (\text{Low}) = \frac{2.5(R_4 + R_5 + R_6)}{R_5 + R_6}$$

$$\text{High output voltage limit, } V_o (\text{High}) = \frac{2.5(R_4 + R_5 + R_6)}{R_6}$$

Voltage sensing delay, $t_d = 10,000 \mu\text{s}$

$$\text{SCR trigger power limiting resistor, } R_g > \frac{V_{in} - 5}{0.2}$$
