

0.5 AMP, 3-Terminal Positive Regulators

IP78M00 Series, IP78M00A Series, IP140M Series, IP140MA Series

DESCRIPTION

The IP78M00/A series of voltage regulators are fixed output regulators intended for local, on-card voltage regulation. These devices are available in 5, 12, and 15 volt options and are capable of delivering in excess of 500 mA over temperature. The A-suffix devices are fully specified at 0.5A, provide 0.01%/V line regulation, 0.3%/A load regulation, and $\pm 1\%$ output voltage tolerance at room temperature. Protection features include safe operating area, current limiting and thermal shutdown. The entire series of regulators is available in TO-39 and Ceramic DIP packages.

FEATURES

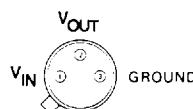

T-58-11-23

- 1% output voltage tolerance
- 5, 12 and 15V fixed output voltages available
- 0.01%/V line regulation
- 0.3%/A load regulation
- Thermal overload protection
- Short-circuit current limit protection
- Safe operating area protection
- Start-up with negative voltage (\pm supplies) on output

ABSOLUTE MAXIMUM RATINGS

T-58-1-2³

Input Voltage ($V_O = 5V, 12V, 15V$)	35V	Maximum Junction Temperature	
Internal Power Dissipation (Note 1)	Internally Limited	H Package TO-39 8 Pin Ceramic DIP Package J	150°C 150°C
Operating Temperature Range (T_j)		Storage Temperature Range	-65°C to 150°C
IP78M00A, IP78M00	-55°C to +150°C	Lead Temperature (Soldering, 10 sec.)	300°C
IP140MA, IP140M	-55°C to +150°C		

Absolute maximum ratings are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the device should be operated at these limits. The electrical characteristics provide conditions for actual device operation.

The • denotes the specifications which apply over the full operating temperature range, all others apply at $T_j = 25^\circ C$ unless otherwise specified.

Note 1: Thermal resistance of the TO-39 package (H) is typically $20^\circ C/W$ junction to case and $120^\circ C/W$ case to ambient. Although power dissipation is internally limited, these specifications apply for up to 2W for the TO-39 package, and 1.05W for the J package. Thermal resistance of the J package is typically $119^\circ C/W$ junction to ambient. (Derate at $8.4mW/^\circ C$ for ambient temperatures above $25^\circ C$).

Note 2: All characteristics are measured with a capacitor across the input of $0.22\mu F$ and a capacitor across the output of $0.1\mu F$. All characteristics except noise voltage and ripple rejection ratio are measured using pulse techniques ($t_w \leq 10ms$, duty cycle $\leq 5\%$). Output voltage changes due to changes in internal temperature must be taken into account separately.
