ICS9111-03/-04

Frequency Generator for Fibre Channel Systems

General Description

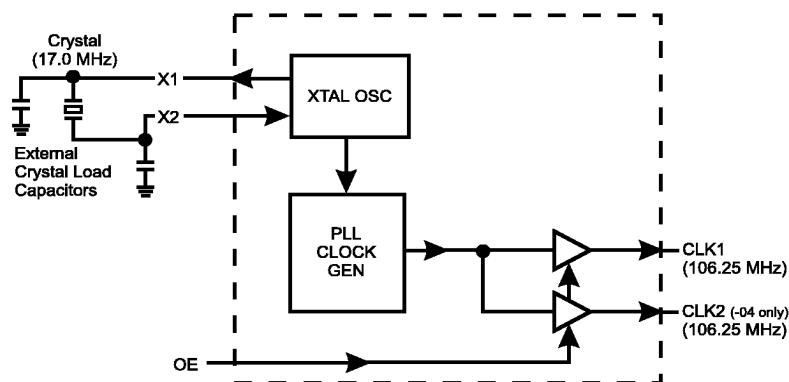

The **ICS9111-03/-04** is a high-speed clock generator designed to support fibre channel system requirements. The **ICS9111-03** generates a single copy of the 106.25 MHz from a 17 MHz crystal. The **ICS9111-04** provides a second copy of the 106.25 MHz clock.

An exact frequency multiplying ratio ensures better than ± 100 ppm frequency accuracy using a standard AT crystal with external load capacitors (typically $33\text{pF} \pm 5\%$ for an 18pF load crystal). Achieving ± 100 ppm over four years requires the crystal to have ± 20 ppm initial accuracy, ± 30 ppm temperature and ± 5 ppm/year aging coefficients.

Features

- Generates one or two 106.25 MHz clocks from a 17 MHz crystal (-03 and -04, respectively)
- Less than 65ps one sigma jitter
- Less than $\pm 200\text{ps}$ absolute jitter
- Rise/fall times less than 2.2ns driving 20pF
- On-chip loop filter components
- 3.0V - 5.5V supply range
- 8-pin, 150-mil SOIC package
