The HCC 4063B (extended temperature range) and HCF 4063B (intermediate temperature range) are available in 16-lead dual in-line plastic or ceramic package, ceramic flat package and plastic micropackage. The HCC/HCF 4063B is a low-power 4-bit magnitude comparator designed for use in computer and logic applications that require the comparison of two 4-bit words. This logic circuit determines whether one 4-bit word (Binary or BCD) is "less than", "equal to" or "greater than" a second 4-bit word. The HCC/HCF 4063B has eight comparing inputs (A_3, B_3 , through A_0, B_0), three outputs ($A < B$, $A = B$, $A > B$) and three cascading inputs ($A < B$, $A = B$, $A > B$) that permit systems designers to expand the comparator function to 8, 12, 16 . . . 4N bits. When a single HCC/HCF 4063B is used, the cascading inputs are connected as follows: ($A < B$) = low, ($A = B$) = high, ($A > B$) = low. For words longer than 4 bits, HCC/HCF 4063B devices may be cascaded by connecting the outputs of the less-significant comparator to the corresponding cascading inputs of the more-significant comparator. Cascading inputs ($A < B$, $A = B$, and $A > B$) on the least significant comparator are connected to a low, a high, and a low level, respectively.
