

Description

The GM76V8128CL/CLL is a 1,048,576 bits static random access memory organized as 131,072 words by 8 bits. Using a 0.6 μ m advanced CMOS technology and it provides high speed operation with minimum cycle time of 70/85ns. The device is placed in a low power standby mode with /CS1 high or CS2 low and the output enable (/OE) allows fast memory access. Thus it is suitable for high speed and low power applications, especially where battery back-up is required.

Write Cycle (1) (/WE Controlled) (Notes 2, 3, 4)

Write Cycle (2) (/CS1 Controlled) (Notes 4)

Write Cycle (3) (CS2 Controlled) (Notes 4)

Notes:

1. /WE is High for Read Cycle.
2. Assuming that /CS1 Low transition or CS2 High transition occurs coincident with or after /WE Low transition. Outputs remain in a high impedance state.
3. Assuming that /CS1 High transition or CS2 Low transition occurs coincident with or prior to /WE High transition. Outputs remain in a high impedance state.
4. Assuming that /OE is high for write cycle. Outputs are in a high impedance state during this period.

Notes: In Data Retention Mode, CS2 controls the Address, /WE, /CS1, /OE and D_{IN} buffer. If CS2 controls data retention mode, V_{IN} for these inputs can be in the high impedance state. If /CS1 controls the data retention mode, CS2 must satisfy either $CS2 > V_{CCR} - 0.2V$ or $CS2 \leq 0.2V$. The other input levels (Address, /WE, /OE, I/O) can be in the high impedance state.
