

QUARTZ CRYSTAL OSCILLATOR

■ GENERAL DESCRIPTION

The NJU6324 series is a C-MOS quartz crystal oscillator which consists of oscillation amplifier, 3-stage divider and 3-state output buffer.

The oscillation frequency is as wide as up to 50MHz and the symmetry of 45-55% is realized over full oscillation frequency range.

The feed-back resistor and oscillation load capacitors (C_g , C_d) incorporated on oscillation amplifier enables oscillation by connecting quartz crystal only.

Only one output frequency is selected from f_0 , $f_0/2$, $f_0/4$ and $f_0/8$ by internal connection.

The 3-state output buffer is C-MOS compatible and capable of 10 LSTTL driving.
