

## Description

The GD74F245 contains eight non-inverting bidirectional buffers with 3-State outputs and is intended for bus-oriented applications.

Current sinking capability is 20mA at the A ports and 64 mA at the B ports. The device allows data transmission from A ports to the B ports or from the B ports to the A ports depending upon the logic level at the directional control(DIR) Input. The output enable Input ( $\bar{G}$ ), when high, disables both A and B ports by placing them in a high Z condition.

## Pin Configuration

## Features

- Non-Inverting Buffers
- Bidirectional Data Path
- B Outputs Sink 64 mA

## Function Table

Inputs		Operation
$\bar{G}$	DIR	
L	L	Bus B Data to Bus A
L	H	Bus A Data to Bus B
H	X	High Z State

X: Immaterial

## Absolute Maximum Ratings

Storage Temperature .....	-65 °C ~ 150 °C
Ambient Temperature Under Bias.....	-55 °C ~ 125 °C
Junction Temperature Under Bias .....	-0.5 °C ~ 175 °C
Vcc Voltage .....	-0.5 V ~ 7.0 V
Input Voltage .....	-0.5 V ~ 7.0 V
Input Current .....	-30 mA ~ 5.0 mA
Output Voltage .....	-0.5 V ~ 5.5 V

Note : Absolute Maximum ratings are values beyond which the device maybe damaged or have its useful life impaired. Functional operation under these conditions is not implied.

## Recommended Operating Conditions

Free Air Ambient Temperature .....	0 °C ~ 70 °C
Supply Voltage .....	4.5 V ~ 5.5 V

## DC Electrical Characteristics over recommended operating free-air temperature range
