

**Quad RS-422 Differential Line  
Driver Radiation Hardened**

**Features**

- High-speed operation: < 15 nS typical
- Low power: < 9 mA typical
- 3.3 V operation
- Standard packaging: 16-lead flat pack
- SEL Immune UTSi CMOS-on-sapphire
- SEU <10-10 errors / bit-day
- 300 Krad Total Dose

**Product Description**

*The PE926C32 is a high performance monolithic CMOS RS-422 line receiver. Its operating supply range is 3.0 to 3.6V, with an input signal common mode range of +/-10V. The PE926C32 offers higher speed and lower power than other RS-422 receiver types. It is packaged in a flat pack and is ideal for space applications.*

*The PE926C32 is manufactured in Peregrine's patented Ultra Thin Silicon (UTSi®) CMOS process, offering the performance of GaAs with the economy and integration of conventional CMOS.*

**Table 1. Pin Descriptions**

Pin No.	Pin Name	Description
1	A-	Channel A Inverting Input
2	A+	Channel A Noninverting Input
3	AQ	Channel A Output
4	E+	Enable, active high
5	BQ	Channel B Output
6	B+	Channel B Noninverting Input
7	B-	Channel B Inverting Input
8	V-	Ground Pin
9	C-	Channel C Inverting Input
10	C+	Channel C Noninverting Input
11	CQ	Channel C Output
12	E-	Enable, active low
13	DQ	Channel D Output
14	D+	Channel D Noninverting Input
15	D-	Channel D Inverting Input
16	V+	Supply Pin

**Table 2. Recommended Operating Conditions**

Symbol	Parameter/Conditions	Min	Max	Units
V+	Supply voltage	3.0	3.6	V
T <sub>OP</sub>	Operating temperature range	-55	125	°C
VIN (Line)	Maximum input voltage A+/-, B+/-, C+/-, D+/-	-7	7	V
VIN (Dig)	Maximum input voltage	0	Vdd	V
VOU	Maximum output voltage	0	Vdd	V
IOU	Maximum output current	-10	10	mA

### Electrostatic Discharge (ESD) Precautions

When handling this UTSi device, observe the same precautions that you would use with other ESD-sensitive devices. Although this device contains circuitry to protect it from damage due to ESD, precautions should be taken to avoid exceeding the rating specified in Table 2.

### Latch-Up Avoidance

Unlike conventional CMOS devices, UltraCMOS™ devices are immune to latch-up.

### Device Functional Considerations

The PE926C32 operates at high switching speeds. In order to obtain maximum performance, it is crucial that pin 16 be supplied with a bypass capacitor to ground (pin 8).

## Data Sheet Identification

### ***Advance Information***

The product is in a formative or design stage. The data sheet contains design target specifications for product development. Specifications and features may change in any manner without notice.

### ***Preliminary Specification***

The data sheet contains preliminary data. Additional data may be added at a later date. Peregrine reserves the right to change specifications at any time without notice in order to supply the best possible product.

### ***Product Specification***

The data sheet contains final data. In the event Peregrine decides to change the specifications, Peregrine will notify customers of the intended changes by issuing a DCN (Document Change Notice).

The information in this data sheet is believed to be reliable. However, Peregrine assumes no liability for the use of this information. Use shall be entirely at the user's own risk.

No patent rights or licenses to any circuits described in this data sheet are implied or granted to any third party.

Peregrine's products are not designed or intended for use in devices or systems intended for surgical implant, or in other applications intended to support or sustain life, or in any application in which the failure of the Peregrine product could create a situation in which personal injury or death might occur. Peregrine assumes no liability for damages, including consequential or incidental damages, arising out of the use of its products in such applications.
