DS7820/DS8820

DS7820/DS8820 Dual Line Receiver

General Description

The DS7820, specified from -55°C to $+125^{\circ}\text{C}$, and the DS8820, specified from 0°C to $+70^{\circ}\text{C}$, are digital line receivers with two completely independent units fabricated on a single silicon chip. Intended for use with digital systems connected by twisted pair lines, they have a differential input designed to reject large common mode signals while responding to small differential signals. The output is directly compatible with TTL or LS integrated circuits.

The response time can be controlled with an external capacitor to eliminate noise spikes, and the output state is determined for open inputs. Termination resistors for the twisted pair line are also included in the circuit. Both the DS7820 and the DS8820 are specified, worst case, over their full operating temperature range, for ± 10 -percent supply voltage variations and over the entire input voltage range.

Features

- Operation from a single +5V logic supply
- Input voltage range of $\pm 15\text{V}$
- Each channel can be strobed independently
- High input resistance
- Fan out of two with TTL integrated circuits
- Strobe low forces output to "1" state

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: These specifications apply for $4.5V \leq V_{CC} \leq 5.5V$, $-15V \leq V_{CM} \leq 15V$ and $-55^{\circ}\text{C} \leq T_A \leq +125^{\circ}\text{C}$ for the DS7820 or $0^{\circ}\text{C} \leq T_A \leq +70^{\circ}\text{C}$ for the DS8820 unless otherwise specified; typical values given are for $V_{CC} = 5.0V$, $T_A = 25^{\circ}\text{C}$ and $V_{CM} = 0$ unless stated differently.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: The specifications and curves given are for one side only. Therefore, the total package dissipation and supply currents will be double the values given when both receivers are operated under identical conditions.
