DS1645/DS3645, DS1675/DS3675 Hex TRI-STATE® TTL to MOS Latches/Drivers

General Description

The DS1645/DS3645 and DS1675/DS3675 are hex MOS latches/drivers with outputs designed to drive large capacitive loads up to 500 pF associated with MOS memory systems. PNP input transistors are used to reduce input currents, allowing the large fan-out to these drivers needed in memory systems. The circuit has Schottky-clamped transistor logic for minimum propagation delay, and TRI-STATE® outputs which allow bus operation.

The DS1645/DS3645 has a 15 Ω resistor in series with the outputs to dampen transients caused by the fast switching output circuit. The DS1675/DS3675 has a direct, low impedance output for use with or without an external resistor.

The circuit employs a fall-through-latch which captures the data in parallel with the output, thereby eliminating the delay normally encountered in other latch circuits. The DS1645/DS3645 and DS1675/DS3675 may be used for input address lines or input/output data lines of a MOS memory system.

Features

- TTL compatible inputs
- PNP inputs minimize loading
- Capacitance-driving outputs
- TRI-STATE outputs
- Built-in damping resistor (DS1645/DS3645)

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the -55°C to +125°C temperature range for the DS1645 and DS1675 and across the 0°C to +70°C range for the DS3645 and DS3675. All typical values are for $T_A = 25^\circ C$ and $V_{CC} = 5V$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: When measuring output drive current and switching response for the DS1675 and DS3675 a 15 ohm resistor should be placed in series with each output. This resistor is internal to the DS1645/DS3645, and need not be added.

Switching Characteristics $V_{CC} = 5V$, $T_A = 25^\circ C$, unless otherwise noted. (Note 4)

Operating Waveforms

*When the Input Enable makes a positive transition the output will be indeterminate for a short duration. The positive transition of the Input Enable normally occurs during a don't-care timing state at the output.

Typical Applications

The DS3645 and DS3675 latch/driver has TRI-STATE outputs, which allows the outputs to be tied with those of another TRI-STATE driver, such as the DS3646 and

DS3676 refresh counter. The DS3645 and DS3675 can be disabled while the alternate driver controls the address lines into the memory system.
