

LV2200M**SANYO****Cordless Telephone System IC****Overview**

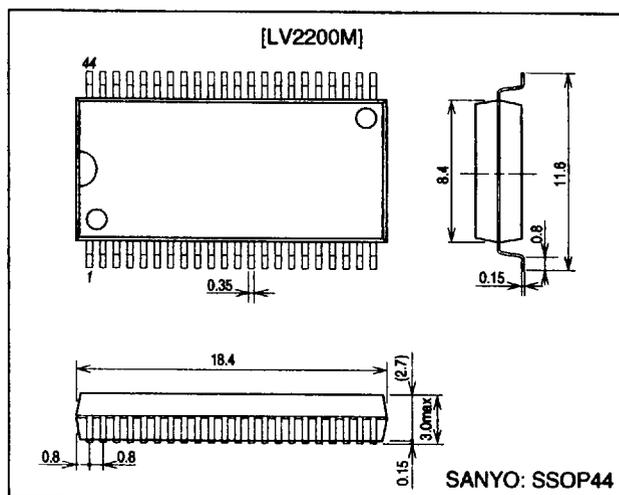

The LV2200M is a cordless telephone system IC that integrates a narrow-band FM IF system that includes an adjustment-free FM detection circuit, a dual-PLL frequency synthesizer, and audio signal-processing functions (comparer) on a single chip. This IC is appropriate for compact design end products.

Functions

- IF system block
 - First mixer, first local oscillator, second mixer, second local oscillator
 - IF amplifier, limiter, RSSI
 - FM detector
 - Noise detection circuit (noise detection, Schmitt input, and noise filter operational amplifier)
- PLL system block (Supports all reception areas worldwide, except Japan.)
 - Two built-in PLL systems, one for reception and one for transmission
 - Programmable divider for the local oscillator
 - Programmable divider for the reference frequency
 - Built-in lock detection circuit (reception PLL)
 - Transmitter and receiver PLL charge pump output current control circuits (PLL loop gain and time constant switching)
- Audio signal-processing block
 - Compressor and expander
 - Transmission audio signal limiter circuit (IDC)
 - Splatter filter (SCF)
 - Microphone amplifier
 - Transmission and reception audio signal mute
 - Reception system audio signal output level switching (low/high)
- Other functions
 - Data input using serial data transmission (Controls all functions, including PLL circuits and muting.)
 - Reception data input system filter (SCF)
 - Reception data waveform shaper circuit (with hysteresis characteristics)
 - Reception VCO regulator
 - PLL regulator
 - Battery check function
 - Two standby modes

Package Dimensions

unit: mm

SSOP44

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

LV2200M

Specifications

Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{CC} max		7	V
Allowable power dissipation	P_d max	$T_a \leq 75^\circ\text{C}$	300	mW
Operating temperature	T_{opr}		-20 to +75	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +125	$^\circ\text{C}$

Operating Conditions at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V_{CC}		3	V
Operating supply voltage	V_{CCop}		2.4 to 5.5	V

Allowable Operating Ranges at $T_a = -20$ to 75°C , $V_{CC} = 2.4$ to 5.5 V

PLL block

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
High-level input voltage	V_{IH}	CL, DI, CE	$V_{CC} \times 0.7$		5.5	V
Low-level input voltage	V_{IL}	CL, DI, CE	0		0.6	V
Output voltage	V_O	LD	0		5.5	V
Input frequency	f_{IN}	PI (TX)	1.0		60	MHz
Input amplitude	V_{IN}	PI (TX), $f_{IN} = 10$ M to 60 MHz	-12		10	dBm

Note : 50 Ω terminate (0 dBm = 0.224 mVrms)

Electrical Characteristics at $T_a = 25^\circ\text{C}$, $V_{CC} = 3$ V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
[Current Drain]						
Quiescent current	I_{CCOP}	No signal input, all circuits active		17.3	24	mA
Standby current	I_{sb-1}	No signal input, only latches active		0.01	10	μA
	I_{sb-2}	No signal input, reception PLL and oscillators active		6.5	9.5	mA
	I_{sb-3}	No signal input, RF system, reception PLL, and DTSH active		12.3	17.3	mA
[IF Block] $f_c = 49.830$ MHz, $f_m = 1$ kHz, $f_{dev} = \pm 3.0$ kHz, AMmod = 30%						
First mixer conversion gain	V_{CG1}			20		dB
Second mixer conversion gain	V_{CG2}			22		dB
Mixer third intercept point	I_{p3}	First mixer		94		dB μ
Demodulator output	V_O	$V_{IN} = 80$ dB μ EMF	138	175	222	mVrms
Total harmonic distortion	THD	$V_{IN} = 80$ dB μ EMF		1.5	3	%
Signal-to-noise ratio	S/N	$V_{IN} = 80$ dB μ EMF	43	48		dB
AM suppression ratio	AMR	$V_{IN} = 80$ dB μ EMF	35	43		dB
RSSI output	V_{REF1}	$V_{IN} = 0$ dB μ EMF	0.1	0.3	0.55	V
	V_{REF2}	$V_{IN} = 20$ dB μ EMF	0.6	0.9	1.3	V
	V_{REF3}	$V_{IN} = 80$ dB μ EMF	1.6	2.0	2.4	V
Noise detector output	V_{ND1}	$f_{IN} = 40$ kHz, $V_{IN} = -20$ dBV	0.85	1.1	1.35	V
	V_{ND2}	$f_{IN} = 40$ kHz, $V_{IN} = -10$ dBV	1.4	1.7	2.0	V
Noise detection	V_{NTH1}	Schmitt circuit on		0.85		V
	V_{NTH2}	Schmitt circuit off		0.75		V
Schmitt output	V_{SH1}	$V_{41} = 1.4$ V			0.2	V
	V_{SH2}	$V_{41} = 0.2$ V	2.8			V
[PLL Block]						
High-level output voltage	V_{OL}	LD, $I_O = 2$ mA			0.5	V
Output off leakage current	I_{OFF1}	LD, $V_O = 3$ V			3	μA
	I_{OFF2}	PDR PDT, $V_O = 1.5$ V			0.1	μA
High-level input current	I_{H1}	CL, DI, CE, $V_I = 3$ V			5	μA
Low-level input current	I_{L1}	CL, DI, CE, $V_I = 0$ V			5	μA

Control Data Function

- Reference divider counter value (R11 to R0)

Binary value in which R0 is the lsb. The divisor can be set to a value in the range 32 to 4095. However, since there is a divide-by-2 circuit in the preceding stage, the actual divisor will be twice the set value.

Example: With a 10.24 MHz crystal, to create a reference frequency f_{ref} of 5 kHz:

$10.24 \text{ MHz} / 5 \text{ kHz} / 2$ gives a divisor of: 1024

Set R11 to R0 to the value 1024 (0400 hexadecimal).

UK1	UK0	R11	R10	R9	R8	R7	R6	R5	R4	R3	R2	R1	R0
0	0	0	1	0	0	0	0	0	0	0	0	0	0

- Receiver programmable divider counter value (PR13 to PR0)

Binary value in which PR0 is the lsb. The divisor can be set to a value in the range 256 to 16383.

Example: To create the receiver VCO frequency of 38.975 MHz when f_{ref} is 5 kHz:

$38.975 / 5 \text{ kHz}$ gives a divisor of: 7795

Set PR11 to PR0 to the value 7795 (1E73 hexadecimal).

PR13	PR12	PR11	PR10	PR9	PR8	PR7	PR6	PR5	PR4	PR3	PR2	PR1	PR0
0	1	1	1	1	0	0	1	1	1	0	0	1	1

- Transmitter programmable divider counter value (PT13 to PT0)

Binary value in which PT0 is the lsb. The divisor can be set to a value in the range 256 to 16383.

Example: To create the transmitter VCO frequency of 46.610 MHz when f_{ref} is 5 kHz:

$46.610 / 5 \text{ kHz}$ gives a divisor of: 9322

Set PT11 to PT0 to the value 9322 (246A hexadecimal).

PT13	PT12	PT11	PT10	PT9	PT8	PT7	PT6	PT5	PT4	PT3	PT2	PT1	PT0
1	0	0	1	0	0	0	1	1	0	1	0	1	0

- Power saving mode settings

SB1	SB0	Setting
0	0	1 st L0 VCO, 2 nd L0 OSC, RX-PLL blocks operate.
0	1	1 st L0 VCO, 2 nd L0 OSC, RX-PLL, 1 st mixer, 2 nd mixer, IF detect, Noise detect, Data shaper, SCF (data system) operate.
1	0	All blocks operate
1	1	All blocks operate

- Baseband muting control

Receiver audio signal

RMT	State
0	Receiver system audio signal muted
1	Receiver system audio signal mute released

Transmitter audio signal

TMT	State
0	Transmitter system audio signal muted
1	Transmitter system audio signal mute released

- Audio level control (receiver system output)

LVL	State
0	Standard level
1	Boosted level (boosted by about +7.4 dB)

LV2200M

- **Charge pump output current control (manual switching)**
The charge pump circuit output current is controlled manually.

(Receiver charge pump output current)

These control states are valid only when both AR0 and AR1 are set to 0.

CR1	CR0	State
0	0	CRA
0	1	CRB
1	0	CRC
1	1	CRD

Current level: CRA > CRB > CRC > CRD

(Transmitter charge pump output current)

These control states are valid only when both AT0 and AT1 are set to 0.

CT1	CT0	State
0	0	CTA
0	1	CTB
1	0	CTC
1	1	CTD

Current level: CTA > CTB > CTC > CTD

- **Charge pump output current control (automatic switching)**
The charge pump circuit output current is controlled automatically.

(Receiver charge pump output current)

AR1	AR0	State
0	0	Manual switching is enabled
0	1	The circuit operates in CRA mode until the receiver PLL locks, and then switches to CRC mode when the circuit locks
1	0	The circuit operates in CRB mode until the receiver PLL locks, and then switches to CRD mode when the circuit locks
1	1	Manual switching is enabled

Current level: CRA > CRB > CRC > CRD

(Transmitter charge pump output current)

AT1	AT0	State
0	0	Manual switching is enabled
0	1	The circuit operates in CTA mode until the transmitter PLL locks, and then switches to CTC mode when the circuit locks
1	0	The circuit operates in CTB mode until the transmitter PLL locks, and then switches to CTD mode when the circuit locks
1	1	Manual switching is enabled

Current level: CTA > CTB > CTC > CTD

- **SCF clock frequency switching**
Low-pass filter 1 (splatter filter)

SCF2	SCF1	SCF0	SCF clock divisor	Cutoff frequency
0	0	0	60	3.313 kHz
0	1	0	62	3.206 kHz
1	0	0	58	3.427 kHz
0	0	1	66	3.106 kHz
0	1	1	68	3.011 kHz
1	0	1	64	2.923 kHz

Low-pass filter 2 (Receiver data input filter)

SCFB	SCF clock divisor	Cutoff frequency
0	60	3.313 kHz
1	120	1.656 kHz

LV2200M

- **Unlock detection width control**

This bit sets the phase error detection width for PLL locked/unlocked discrimination. The unlocked state is detected when the phase error listed in the table below occurs.

ULD	Phase error detection width	When the second crystal frequency is 10.24 MHz
0	$\pm 4/2nd \text{ Xtal}$	390 ns
1	$\pm 8/2nd \text{ Xtal}$	780 ns

Note: If this bit is changed while the PLL circuit is locked, lock will be lost temporarily.

- **Phase error output control**

Controls whether the unlock output pin (pin 15) output is set to the post-unlock detection output, or directly outputs phase detector phase error without modification.

PE	State
0	The unlock detector result is output
1	The phase detector phase error is output without modification

- **Dead zone control**

Controls the phase comparator dead zone.

DZ	State
0	DZA
1	DZB

DZA < DZB

- **Transmitter unlock detector function**

Pin 20 normally functions as the data addition amplifier input. However, it operates as the transmitter system unlock detector output if ULT is set to 1.

ULT	State
0	Data addition amplifier input function enabled
1	Transmitter unlock detector output function enabled

- **Charge pump circuit on/off function**

CP	State
0	Charge pump circuit turned on
1	Charge pump circuit turned off

- **Battery check function**

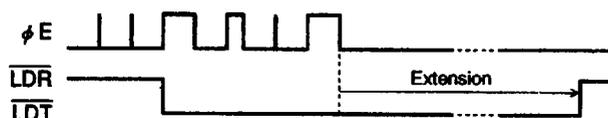

Pin 15 normally outputs the receiver unlock detector output. However, it can be set to function as the battery tester with the following mode settings.

BT1	BT0	Mode
0	0	Receiver unlock detector output enabled
0	1	Supply voltage detection level 1 ($V_{CC} \approx 3.3 \text{ V}$)
1	0	Supply voltage detection level 2 ($V_{CC} \approx 3.05 \text{ V}$)
1	1	Supply voltage detection level 3 ($V_{CC} \approx 2.85 \text{ V}$)

- **Phase error extension time**

The time the detected phase error signal is extended.

Extension time = $32 \times (1/\text{fref}) = 32/5 \text{ kHz} = 6.4 \text{ ms}$
 (fref = reference frequency)

Noise Schmitt Temperature Characteristics

Noise Detector Output Voltage

■ Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

■ SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.

■ In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.

■ No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.

■ Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.

■ Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

This catalog provides information as of July, 1999. Specifications and information herein are subject to change without notice.
