Monolithic CMOS Analog Switches

Features

- **ON-Resistance** <35Ω
- **Low Power Consumption (P_D)** <35μW
- **Fast Switching Action**
 - t_{ON} <150ns
 - t_{OFF} <100ns
- **Low Charge Injection**
- **DG401 Dual SPST; Same Pinout as HI-5041**
- **DG403 Dual SPDT; DG190, IH5043, IH5151, HI-5051**
- **DG405 Dual DPST; DG184, HI-5045, IH5145**
- **TTL, CMOS Compatible**
- **Single or Split Supply Operation**

Applications

- **Audio Switching**
- **Battery Operated Systems**
- **Data Acquisition**
- **Hi-Rel Systems**
- **Sample and Hold Circuits**
- **Communication Systems**
- **Automatic Test Equipment**

Description

The DG401, DG403 and DG405 monolithic CMOS analog switches have TTL and CMOS compatible digital inputs.

These switches feature low analog ON resistance (<35Ω) and fast switch time (t_{ON} < 150ns). Low charge injection simplifies sample and hold applications.

The improvements in the DG401/403/405 series are made possible by using a high voltage silicon-gate process. An epitaxial layer prevents the latch-up associated with older CMOS technologies. The 44V maximum voltage range permits controlling 30V_{p-p} signals. Power supplies may be single-ended from +5V to +34V, or split from ±5V to ±17V.

The analog switches are bilateral, equally matched for AC or bidirectional signals. The ON resistance variation with analog signals is quite low over a ±15V analog input range. The three different devices provide the equivalent of two SPST (DG401), two SPDT (DG403) or two DPST (DG405) relay switch contacts with CMOS or TTL level activation. The pinout is similar, permitting a standard layout to be used, choosing the switch function as needed.

Ordering Information

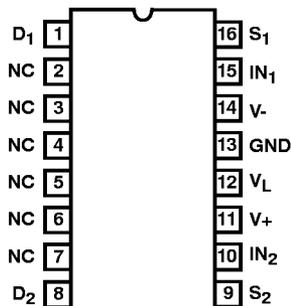

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
DG401AK/883 (Note 2)	-55 to 125	16 Ld Cerdip	F16.3
DG401DJ	-40 to 85	16 Ld PDIP	E16.3

Absolute Maximum Ratings

V+ to V-	+44.0V
GND to V-	25V
VL	(GND - 0.3V) to (VC+) +0.3V
Digital Inputs (Note 1), V _S , V _D	(V-) -2V to (V+) + 2V or 30mA, Whichever Occurs First
Continuous (Any Terminal) Current, (Note 1)	±30mA
Peak Current, S or D (Note 1) (Pulsed 1ms, 10% Duty Cycle)	±100mA

Operating Conditions

Temperature (D and E Suffix)	-40°C to 85°C
Voltage Range	±20V (Max)
Temperature Range	-55°C to 125°C
Input Low Voltage	0.8V (Max)
Input High Voltage	2.4V (Min)
Input Rise and Fall Time	.20ns

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. Signals on S_X, D_X, or IN_X exceeding V+ or V- will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
2. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Electrical Specifications Test Conditions: V+ = +15V, V- = -15V, V_{IN} = 2.4V, 0.8V, V_L = 5V (Note 3), Unless Otherwise Specified

NOTES:

3. V_{IN} = input voltage to perform proper function.
4. Hot = as determined by the operating temperature suffix.
5. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
6. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.

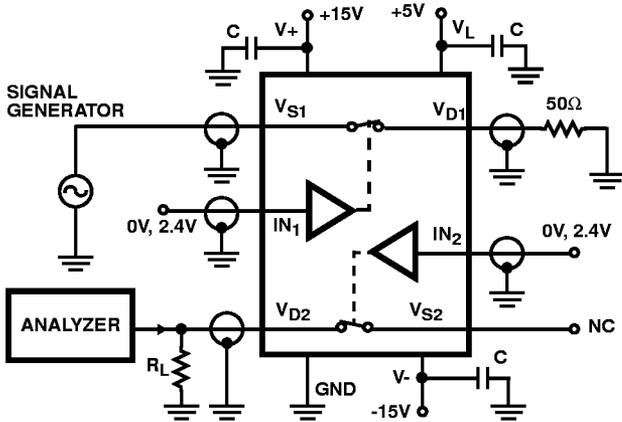

FIGURE 30. CROSSTALK

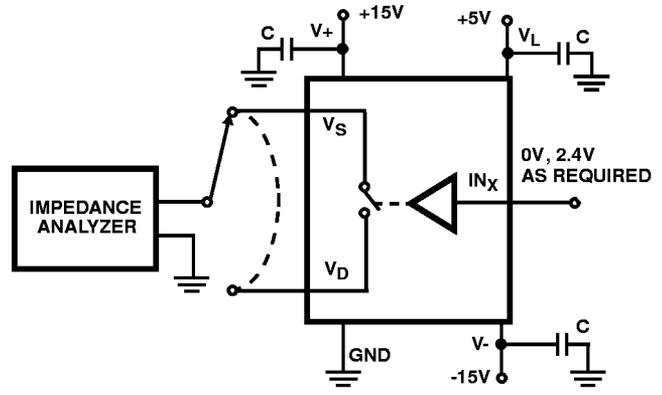

FIGURE 31. CAPACITANCES

Dual Slope Integrators

The DG403 is well suited to configure a selectable slope integrator. One control signal selects the timing capacitor C_1 or C_2 . Another one selects e_{IN} or discharges the capacitor in preparation for the next integration cycle.

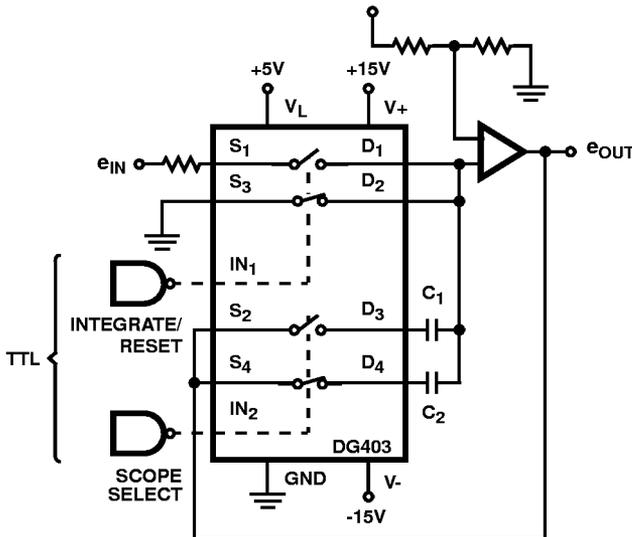

FIGURE 32. DUAL SLOPE INTEGRATOR

Peak Detector

A_3 acting as a comparator provides the logic drive for operating SW_1 . the output of A_2 is fed back to A_3 and compared to the analog input e_{IN} . If $e_{IN} > e_{OUT}$ the output of A_3 is high keeping SW_1 closed. This allows C_1 to charge up to the analog input voltage. When e_{IN} goes below e_{OUT} of A_3 goes negative, turning SW_1 off. the system will therefore store the most positive analog input experienced.

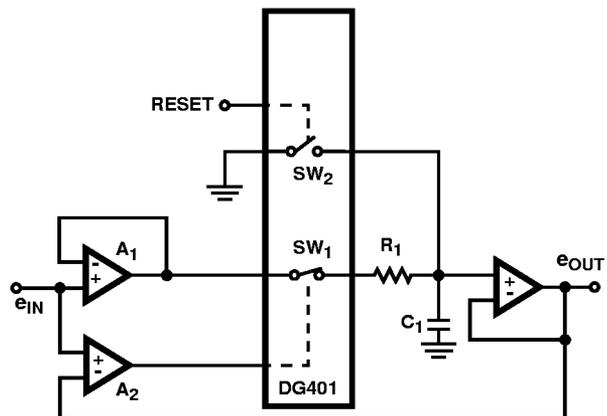

FIGURE 33. POSITIVE PEAK DETECTOR
