

DG125

5-Channel SPST PMOS Analog Switch

FEATURES

- Internal Zener Diode Protection
- Low Standby Power Requirements ($P_{STDBY} < 0.5 \text{ mW}$)
- Low OFF Leakage
- Low Level Logic Control

BENEFITS

- Reduces Switching Errors
- Reduces External Components

APPLICATIONS

- Communication Systems
- Portable and Battery Operation
- Op Amp Switching
- Variable Gain Switching

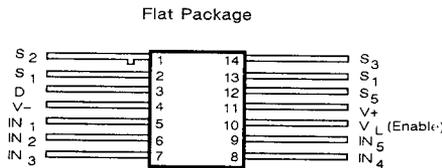

DESCRIPTION

The DG125 is a 5-channel single-pole, single-throw analog switch designed for low level logic controlled analog switching in instrumentation, process control, and communications systems. Featuring make-before-break action, the DG125, built on Siliconix's PMOS process, can be used in closed loop systems to select one or more of five inputs for multiplexing/demultiplexing, summing of analog signals, or for gain bandwidth control (by switching passive elements), without opening the loop.

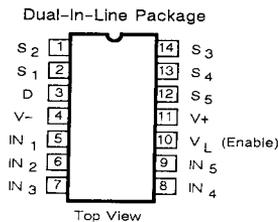

In standby or OFF state, power consumption is less than 0.5 mW. The DG125 is a bi-directional MOS switch, rated to handle $\pm 10 \text{ V}$ analog signals at up to 30 mA continuous current. Each switch will block 20 V peak-to-peak signals when OFF.

Packaging for the DG125 includes 14-pin side braze and flatpack options. Performance grades include both the military, A suffix (-55 to 125°C) and industrial, B suffix (-25 to 85°C) temperature ranges. The flatpack option is only available in the military grade.

NOTES:

- a. Refer to PROCESS OPTION FLOWCHART for additional information.
- b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
- c. Guaranteed by design, not subject to production test.
- d. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.

SWITCHING TIME TEST CIRCUIT

Switch output waveform shown for $V_S =$ constant with logic input waveform as shown. Note that V_S may be + or - as per switching time test circuit. V_O is the steady state output with switch ON. Feedthrough via gate capacitance may result in spikes at leading and trailing edge of output waveform.
