LOW POWER LOW OFFSET VOLTAGE QUAD COMPARATORS

These devices consist of four independent precision voltage comparators with an offset voltage specifications as low as 2 mV max for LM339A and LM139A. All these comparators were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible.

These comparators also have a unique characteristic in that the input common-mode voltage range includes ground even though operated from a single power supply voltage.

- Wide single supply voltage range or dual supplies for all devices (excepted MC3302): +2 V to +36 V or ± 1 V to ± 18 V
- Very low supply current drain (0.8 mA) independent of supply voltage (2 mW/comparator at +5 V).
- Low input bias current: 25 nA typ.
- Low input offset current: ± 5 nA typ.
- Low input offset voltage: ± 3 mV typ.
- Input common-mode voltage range includes ground
- Low output saturation voltage: 250 mV typ. ($I_O = 4$ mA).
- Differential input voltage range to the supply voltage.
- TTL compatible outputs.

ORDERING INFORMATION

Hi-Rel versions available - See chapter 14

PART NUMBER	TEMPERATURE RANGE	PACKAGE			
		DP	DG	FP	GC
LM139,A	-55°C to +125°C		•		•
LM239,A	-25°C to +85°C	•	•		
LM339,A	0°C to +70°C	•	•	•	
LM2901	-40°C to +85°C	•		•	
MC3302	-40°C to +85°C	•

MAXIMUM RATINGS

Rating	Symbol	LM139,A LM239,A	LM339,A	LM2901 MC3302	
Supply voltage MC3302	V_{CC}	± 18 to 36 —	± 18 to 36 —	± 18 to 36 ± 14 to 28	V
Differential Input voltage	V_{ID}	36	36	36	V
Input voltage MC3302	V_I	-0.3 to +36 —	-0.3 to +36 —	-0.3 to +36 -0.3 to +28	V
Output short-circuit to ground - (Note 2)	—	Continuous	Continuous	Continuous	—
Power dissipation - (Note 1) LM139GC	P_{tot}	570 665	570 —	570 —	mW
Operating free-air temperature range LM239,A	T_{oper}	-55 to +125 -25 to +85	0 to +70 —	-40 to +85 —	°C
Storage temperature range	T_{stg}	-65 to +150	-65 to +150	-65 to +150	°C

Note 1 : Short-circuit from the output to V_{CC}^+ can cause excessive heating and eventual destruction. The maximum output current is approximately 20 mA, independent of the magnitude of V_{CC}^+ .

Note 2 : For operating at high temperatures, the LM139, LM139A, LM2901 and MC3302 must be derated based on a +125°C max junction temperature and a thermal resistance of 175°C/W which applies for the device soldered on a printed circuit board, operating in a still air ambient. The LM139 and LM139A must be derated based on a +150°C max junction temperature.

* $R_{th(j-a)} = 250^\circ\text{C/W}$. Devices bonded on a $6 \times 3 \times 0.15$ cm glass-epoxy substrate with 30 mm^2 of $35 \mu\text{m}$ thick copper.

Note 3: At output switch point, $V_{\text{O}} \approx 1.4\text{ V}$, $R_{\text{S}} = 0$ with $V_{\text{CC}}^{+} = 5\text{ V}$, and over the full input common-mode range (0 V to $V_{\text{CC}}^{+} - 1.5\text{ V}$).

Note 4: The direction of the input current is out of the IC due to the PNP input stage. This current is essentially constant, independent of the state of the output, so no loading charge exists on the reference or input lines.

Note 5: The input common-mode voltage of either input signal voltage should not be allowed to go negative by more than 0.3 V. The upper end of the common-mode voltage range is $V_{\text{CC}}^{+} - 1.5\text{ V}$, but either or both inputs can go to $+30\text{ V}$ without damage.

Note 6: The response time specified is for a 100 mV input step with 5 mV overdrive. For larger overdrive signals 300 ns can be obtained.

Note 7: Positive excursions of input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage state must not be less than -0.3 V (or 0.3 V below the negative power supply, if used).
