SLOS058A – OCTOBER 1979 – REVISED DECEMBER 1992

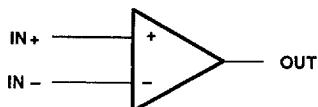

- μ A741 Operating Characteristics
- Low Supply Current Drain . . . 0.6 mA Typ (per amplifier)
- Low Input Offset Voltage
- Low Input Offset Current
- Class AB Output Stage
- Input/Output Overload Protection
- Designed to Be Interchangeable With National LM148, LM248, and LM348

description

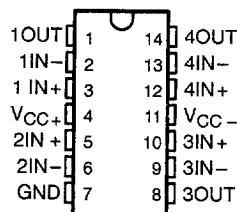

The LM148, LM248, and LM348 are quadruple, independent, high-gain, internally compensated operational amplifiers designed to have operating characteristics similar to the μ A741. These amplifiers exhibit low supply current drain, and input bias and offset currents that are much less than those of the μ A741.

The LM148 is characterized for operation over the full military temperature range of -55°C to 125°C , the LM248 is characterized for operation from -25°C to 85°C , and the LM348 is characterized for operation from 0°C to 70°C .

- NOTES:
1. All voltage values, except differential voltages, are with respect to the midpoint between V_{CC+} and V_{CC-} .
 2. Differential voltages are at $\text{IN}+$ with respect to $\text{IN}-$.
 3. The magnitude of the input voltage must never exceed the magnitude of the supply voltage or the value specified in the table, whichever is less.
 4. The output may be shorted to ground or either power supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.
