## DESCRIPTION

The LH1512 relays contain normally open and normally closed switches that can be used independently as a 1 Form A and 1 Form B relay, or when used together, as a 1 Form C relay. The relays are constructed using GaAlAs LEDs for actuation control and integrated monolithic dies for the switch outputs.

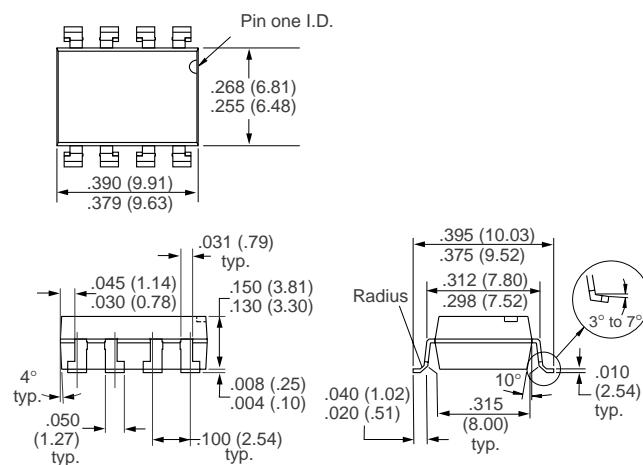

The die, fabricated in a high-voltage dielectrically isolated technology, is comprised of a photodiode array, switch control circuitry, and MOSFET switches.

## Recommended Operating Conditions

## Absolute Maximum Ratings, $T_A=25^\circ\text{C}$

Stresses in excess of the Absolute Maximum Ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to maximum rating conditions for extended periods can adversely affect device reliability.

Ambient Operating Temperature Range, $T_A$ .....	-40 to +85°C
Storage Temperature Range, $T_{\text{stg}}$ .....	-40 to +150°C
Pin Soldering Temperature, $t=10$ s max, $T_S$ .....	260°C
Input/Output Isolation Test Voltage, $t=1.0$ s, $I_{\text{ISO}}=10 \mu\text{A}$ max., $V_{\text{ISO}}$ .....	5300 V <sub>RMS</sub>
Pole-to-Pole Isolation Voltage (S1 to S2)* .....	1600 V
LED Continuous Forward Current, $I_F$ .....	50 mA
LED Reverse Voltage, $I_R \leq 10 \mu\text{A}$ , $V_R$ .....	8.0 V
