

Spread Spectrum Clock Generator

Features

- 4- to 32-MHz input frequency range
- 4- to 128-MHz output frequency range
- Accepts clock, crystal, and resonator inputs
- 1x, 2x, and 4x frequency multiplication:
 - CY25811: 1x; CY25812: 2x; CY25814: 4x
- Center and down spread modulation
- Low power dissipation:
 - 3.3V = 52 mW-typ @ 6MHz
 - 3.3V = 60 mW-typ @ 12MHz
 - 3.3V = 72 mW-typ @ 24MHz
- Low cycle-to cycle jitter:
 - 8 MHz = 450 ps-max
 - 16 MHz = 225 ps-max
 - 32 MHz = 150 ps-max
- Available in 8-pin SOIC and TSSOP packages
- Commercial and industrial temperature ranges

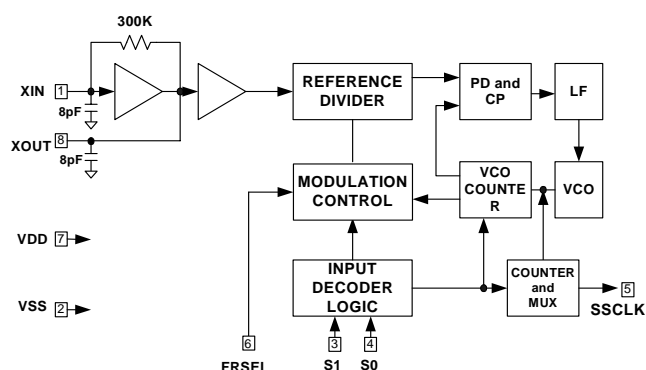

Applications

- Printers and MFPs
- LCD panels
- Digital copiers
- PDAs
- CD-ROM, VCD, and DVD
- Networking, LAN/WAN
- Scanners
- Modems
- Embedded digital systems

Benefits

- Peak EMI reduction by 8 to 16 dB
- Fast time to market
- Cost reduction

Block Diagram

Pin Configuration

Pin Description

Pin No.	Name	Type	Description
1	Xin/CLK		Crystal, ceramic resonator or clock input pin.
2	VSS		Power supply ground.
3	S1		Digital Spread% control pin. 3-Level input (H-M-L). Default = M.
4	S0		Digital Spread% control pin. 3-Level input (H-M-L). Default = M.
5	SSCLK		Spread Spectrum output clock.
6	FRSEL		Input frequency range selection digital control input. 3-Level input (H-M-L). Default = M.
7	VDD		Positive power supply.
8	XOUT		Crystal or ceramic resonator output pin.

General Description

The CY25811/12/14 products are Spread Spectrum Clock Generator (SSCG) ICs used for the purpose of reducing electromagnetic interference (EMI) found in today's high-speed digital electronic systems.

The devices use a Cypress proprietary phase-locked loop (PLL) and Spread Spectrum Clock (SSC) technology to synthesize and modulate the frequency of the input clock. By frequency modulating the clock, the measured EMI at the fundamental and harmonic frequencies is greatly reduced.

This reduction in radiated energy can significantly reduce the cost of complying with regulatory agency requirements and improve time to market without degrading system performance.

The input frequency range is 4 to 32 MHz and accepts clock, crystal and ceramic resonator inputs. The output clock can be selected to produce 1x, 2x, or 4x multiplication of the input frequency with Spread Spectrum Frequency Modulation.

The use of 2x or 4x frequency multiplication eliminates the need for higher order crystals and enables the user to generate up to 128-MHz Spread Spectrum Clock (SSC) by using only first order crystals. This will reduce the cost while improving the system clock accuracy, performance and complexity.

Center Spread or Down Spread frequency modulation can be selected by the user based on four discrete values of

Spread % for each Spread Mode with the option of a Non-Spread mode for system test and verification purposes.

The CY25811/12/14 products are available in an 8-pin SOIC (150-mil.) package with a Commercial operating temperature range of 0 to 70°C and Industrial Temperature range of –40 to 85°C. Refer to CY25568 for multiple clock output options such as modulated and unmodulated clock outputs or Power-down function. For Automotive applications, refer to CY25811/12/14SE data sheet.

Input Frequency Range and Selection

The CY25811/12/14 input frequency range is 4 to 32 MHz. This range is divided into three segments and controlled by 3-Level FRSEL pin as given in *Table 1*.

Table 1. Input Frequency Selection

FRSEL	Input Frequency Range
0	4.0 to 8.0 MHz
1	8.0 to 16.0 MHz
M	16.0 to 32.0 MHz

Spread% Selection

The CY25811/12/14 SSCG products provide Center-Spread, Down-Spread and No-Spread functions. The amount of Spread% is selected by using 3-Level S0 and S1 digital inputs and Spread% values are given in *Table 2*.

Table 2. Spread% Selection

XIN (MHz)	FRSEL	S1 = 0 S0 = 0	S1 = 0 S0 = M	S1 = 0 S0 = 1	S1 = M S0 = 0	S1 = 1 S0 = 1	S1 = 1 S0 = 0	S1 = M S0 = 1	S1 = 1 S0 = M	S1 = M S0 = M
		Center (%)	Center (%)	Center (%)	Center (%)	Down (%)	Down (%)	Down (%)	Down (%)	No Spread
4-5	0	±1.4	±1.2	±0.6	±0.5	–3.0	–2.2	–1.9	–0.7	0

3-Level Digital Inputs

S0, S1, and FRSEL digital inputs are designed to sense 3 different logic levels designated as High “1”, Low “0” and Middle “M”. With this 3-Level digital input logic, the 3-Level Logic is able to detect 9 different logic states.

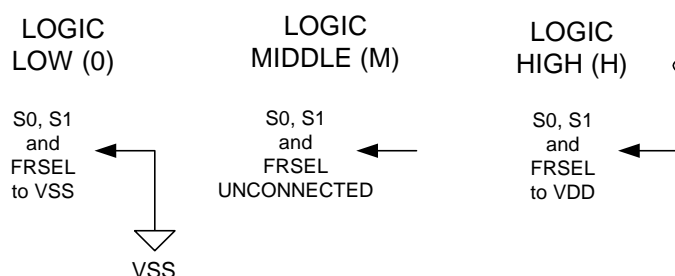

S0, S1 and FRSEL pins include an on chip 20K (10K/10K) resistor divider. No external application resistors are needed to implement the 3-Level logic levels as shown below:

Logic Level “0”: 3-Level logic pin connected to GND.

Logic Level “M”: 3-Level logic pin left floating (no connection).

Logic Level “1”: 3-Level logic pin connected to V_{DD}.

Figure 1 illustrates how to implement 3-Level Logic.

Figure 1. 3-Level Logic

Modulation Rate

Spread Spectrum Clock Generators utilize frequency modulation (FM) to distribute energy over a specific band of frequencies. The maximum frequency of the clock (f_{max}) and minimum frequency of the clock (f_{min}) determine this band of frequencies. The time required to transition from f_{min} to f_{max} and back to f_{min} is the period of the Modulation Rate. The Modulation Rate of SSCG clocks are generally referred to in terms of frequency, or

$$f_{mod} = 1/T_{mod}$$

The input clock frequency, f_{in}, and the internal divider determine the Modulation Rate.

In the case of CY25811/2/4 devices, the (Spread Spectrum) modulation Rate, f_{mod}, is given by the following formula:

$$f_{mod} = f_{in}/DR$$

where; f_{mod} is the Modulation Rate, f_{in} is the Input Frequency and DR is the Divider Ratio as given in Table 3. Notice that Input Frequency Range is set by FRSEL.

Table 3. Modulation Rate Divider Ratios

FRSEL	Input Frequency Range (MHz)	Divider Ratio (DR)
0	4 to 8	128
1	8 to 16	256
M	16 to 32	512

Input and Output Frequency Selection

The relationship between input frequency versus output frequency in terms of device selection and FRSEL setting is given in Table 4. As shown, the input frequency range is selected by FRSEL and is the same for CY25811, CY25812, and CY25814. The selection of CY25811 (1x), CY25812 (2x) or CY25814 (4x) determines the frequency multiplication at the output (SSCLK, Pin 5) with respect to input frequency (XIN, Pin-1).

Table 4. Input and Output Frequency Selection

Input Frequency Range (MHz)	FRSEL	Product	Multiplication	Output Frequency Range (MHz)
4 to 8	0	CY25811	1x	4 to 8
8 to 16	1	CY25811	1x	8 to 16
16 to 32	M	CY25811	1x	16 to 32
4 to 8	0	CY25812	2x	8 to 16
8 to 16	1	CY25812	2x	16 to 32
16 to 32	M	CY25812	2x	32 to 64
4 to 8	0	CY25814	4x	16 to 32
8 to 16	1	CY25814	4x	32 to 64
16 to 32	M	CY25814	4x	64 to 128

Absolute Maximum Conditions (both Commercial and Industrial Grades)^[1,2]

Parameter	Description	Condition	Min.	Max.	Unit
V _{DD}	Supply Voltage		-0.5	4.6	V
V _{IN}	Input Voltage	Relative to V _{SS}	-0.5	V _{DD} + 0.5	VDC
T _S	Temperature, Storage	Non Functional	-65	150	°C
T _{A1}	Temperature, Operating Ambient	Functional, C-Grade	0	70	°C

Characteristic Curves

The following curves demonstrate the characteristic behavior of the CY25811/12/14 when tested over a number of environmental and application-specific parameters. These are typical performance curves and are not meant to replace any parameter specified in DC and AC Specification tables.

Jitter vs. Input Frequency (No Load)

Bandwidth % vs. Temperature

IDD vs. Frequency (FRSEL = 0, 1, M)

Bandwidth % vs. VDD

Figure 2. Characteristic Curves

SSCG Profiles

CY25811/12/14 SSCG products use a non-linear “optimized” frequency profile as shown in *Figure 3*. The use of Cypress proprietary “optimized” frequency profile maintains flat energy distribution over the fundamental and higher order harmonics. This results in additional EMI reduction in electronic systems.

Xin = 6.0 MHz SSCLK1 = 6.0 MHz
S1, S0 = 0
FRSEL = 0 P/N = CY25811

Xin = 24.0 MHz SSCLK1 = 24.0 MHz
S1, S0 = 0
FRSEL = M P/N = CY25811

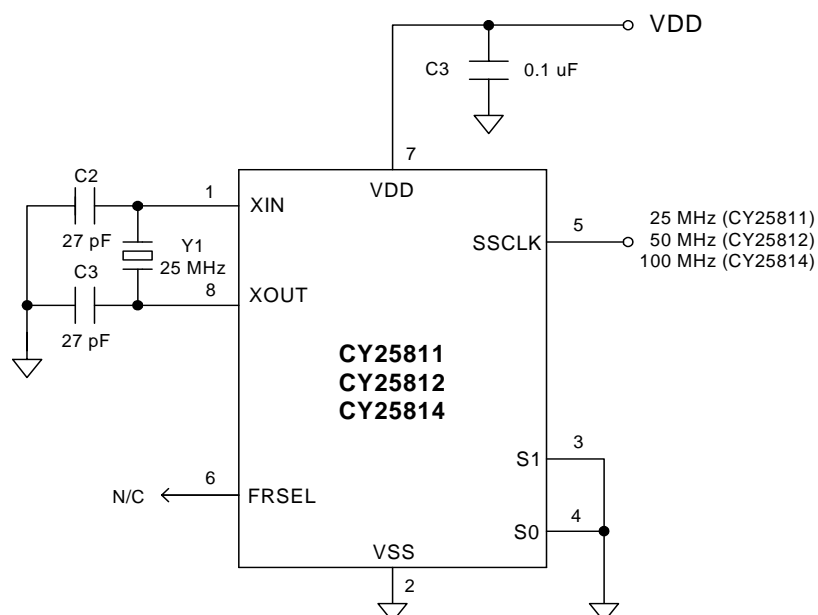

Xin = 12.0 MHz SSCLK1 = 48.0 MHz
S1, S0 = 0
FRSEL = 1 P/N = CY25814

Xin = 24.0 MHz SSCLK1 = 96.0 MHz
S1, S0 = 0
FRSEL = M P/N = CY25814
