Combinatorial ECL 16P4 Programmable Logic Device

Features

- **Standard 16P4 pinout and architecture**
 - 16 inputs, 4 outputs
 - User-programmable output polarity
- **Ultra high speed/standard power**
 - $t_{PD} = 3 \text{ ns (max.)}$
 - $I_{EE} = 220 \text{ mA (max.)}$
- **Low-power version**
 - $t_{PD} = 4 \text{ ns (max.)}$
 - $I_{EE} = 170 \text{ mA (max.)}$
- **Both 10KH- and 100K-compatible I/O versions available**
- **Enhanced test features**
 - Additional test input terms
 - Additional test product terms
- **Security fuse**

Functional Description

Cypress Semiconductor's PLD family offers the user the highest level of performance in ECL programmable logic devices. These PLDs are developed using an advanced process incorporating proven Ti-W fuses.

The CY10E302 is 10KH compatible and the CY100E302 is 100K compatible. These PLDs implement the familiar sum-of-products logic functions by selectively programming cell elements to configure the AND gates by disconnecting either the true or complement input term. If all inputs are disconnected from an AND gate, then a logical true will exist at the output of this AND gate. An output polarity fuse is also provided to allow an active LOW to

occur if this fuse is blown. A security feature provides the user protection for the implementation of proprietary logic. When invoked by blowing the security fuse, the contents of the array cannot be accessed in the verify mode.

The CY10E302 and CY100E302 can be programmed using Cypress's QuickPro II or other industry-standard programming equipment. Programming support information can be obtained from local Cypress Semiconductor sales offices.

Notes:

- Tested initially and after any design or process changes that may affect these parameters.
- $V_{IL} = V_{IL} \text{ Min.}$, $V_{IH} = V_{IH} \text{ Max.}$ on 10KH version.
- $V_{IL} = -1.7V$, $V_{IH} = -0.9V$ on 100K version
- $R_L = 50\Omega$, $C < 5 \text{ pF}$ (includes fixture and stray capacitance).
- All coaxial cables should be 50Ω with equal lengths. The delay of the coaxial cables should be "nulled" out of the measurement.
- $t_r = t_f = 0.7 \text{ ns}$
- All timing measurements are made from the 50% point of all waveforms.
