The RCA CD54/74AC109 and CD54/74AC112 and the CD54/74ACT109 and CD54/74ACT112 dual "J-K" flip-flops with set and reset use the RCA ADVANCED CMOS technology. These flip-flops have independent J, K (or  $\bar{K}$ ), Set, Reset, and Clock inputs and Q and  $\bar{Q}$  outputs. The CD54/74AC/ACT112 changes state on the negative-going transition of the clock pulse. The CD54/74AC/ACT109 changes state on the positive-going transition of the clock. Set and Reset are accomplished asynchronously by low-level inputs.

The CD74AC/ACT109 and CD74AC/ACT112 are supplied in 16-lead dual-in-line plastic packages (E suffix) and in 16-lead dual-in-line small-outline plastic packages (M suffix). Both package types are operable over the following temperature ranges: Commercial (0 to 70°C); Industrial (-40 to +85°C); and Extended Industrial/Military (-55 to +125°C).

The CD54AC/ACT109 and CD54AC/ACT112, available in chip form (H suffix), are operable over the -55 to +125°C temperature range.
