

16-/8- BIT SINGLE-CHIP MICROCOMPUTER

DESCRIPTION

μPD78P312A is a 16-/8-bit single-chip microcomputer having the same functions as μPD78312A, except that the internal mask ROM of μPD78312A is replaced with one-time ROM or EPROM. Allowing data to be written only once, the one-time EPROM product is suited for small-scale production of various types of products, or early development of the application system. The EPROM version allows programs to be written more than once and is ideal for system evaluation.

A detailed functional description is provided in the following user's manual. Be sure to read this manual when designing your system.

μPD78312A User's Manual: IEM-5086

FEATURES

- Compatible with μPD78312A
 - Can be replaced with μPD78312A, which integrates mask ROM, when the application system is mass-produced
- Internal PROM: 8,192 x 8 bits
 - Data can be written only once (one-time PROM product without window)
 - Erasable by ultraviolet ray. Electrically rewritten (EPROM product with window)
- PROM programming characteristics: Compatible with μPD27C256A
- Available as QTOP™ microcomputer

★

Remarks: QTOP microcomputer is the generic name for the NEC built-in PROM single-chip micro computer providing total support of program writing, printing, screening, and verifying.

ORDERING INFORMATION

Part Number	Package	Internal ROM
μPD78P312ACW	64-pin plastic shrink DIP (750 mil)	One-time PROM
μPD78P312AGF-3BE	64-pin plastic QFP (14 x 20 mm)	ditto
μPD78P312AGQ-36	64-pin plastic QUIP	ditto
μPD78P312AL	68-pin plastic QFJ (□ 950 mil)	ditto
μPD78P312ADW	64-pin shrink DIP with ceramic window (750 mil)	EPROM
μPD78P312AR	64-pin QUIP with ceramic window	ditto

QUALITY GRADE

Standard

Please refer to "Quality Grade on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specification of quality grade on the devices and their recommended

The information in this document is subject to change without notices.

1. PIN FUNCTIONS

1.1 PORT PINS

Pin Name	Input/ Output	Shared Pin *	Function
P00-P05	Input/ output, real-time output	—	(Port 0) • This is an 8-bit input/output port that can be specified for input or output in bit units. • This port can be used as two independent 4-bit real-time output ports (channels)
P06		($\overline{CE}$)	
P07		($\overline{OE}$)	
P10-P17	Input/ Output	(A0-A7)	(Port 1) This is an 8-bit input/output port that can be specified for input or output in bit units.
P20	Input	NMI	(Port 2) P20 to P23 are input port pins. P24 to P27 are input/output port pins each of which can be independently specified for input or output.
P21		INTE0	
P22		INTE1	
P23		INTE2	
P24	Input/ output	TxD	
P25		RxD	
P26		SCK	
P27		CTS	
P30	Input	CI0	(Port 3) P30 to P33 are input port pins. P34 to P37 are input/output port pins each of which can be independently specified for input or output.
P31		CTRL0	
P32		CI1	
P33		CTRL1	
P34	Input/ output	PWM0	
P35		PWM1	
P36		TO0-CLR0	
P37		TO1-CLR1	
P40-P47	Input/ output	AD0-AD7 (D0-D7)	(Port 4) This is an 8-bit input/output port that can be specified for input or output in 8-bit units.
P50-P54	Input/ output	A8-A12 (A8-A12)	(Port 5) This is an 8-bit input/output port that can be specified for input or output in bit units.
P55-P57		A13-A15	

*: Parentheses indicate the pin name shared in the PROM programming mode.

1.2 ALL OTHER PINS (IN NORMAL OPERATION MODE)

(1/2)

Pin Name	Input/ Output	Shared Pin*	Function
NMI	Input	P20	Non-maskable interrupt request pin
INTE0	Input	P21	External interrupt request input pin
INTE1		P22	
INTE2		P23	
TxD	Output	P24	Serial data output pin
RxD	Input	P25	Serial data input pin
SCK	Output	P26	Serial clock output pin
CTS	Input/ Output	P27	- In the asynchronous mode, this pin serves as the transmit enable control pin. - In the I/O interface mode, this pin inputs/outputs the serial clock.
CI0	Input	P30	These pins input the external count clock for the count unit.
CI1		P32	
CTRL0	Input	P31	These pins input the count operation selection control signal for the count unit.
CTRL1		P33	
CLR0	Input	P36/TO0	Count unit clear signal input pin
CLR1		P37/TO1	
PWM0	Output	P34	PWM output pin
PWM1		P35	
TO0	Output	P36/CLR0	Timer unit pulse output pin
TO1		P37/CLR1	
AD0-AD7	Input/ Output	P40-P47 (D0-D7)	Multiplexed address/data bus pins used when the external memory space is expanded.
A8-A12	Output	P50-P54 (A8-A12)	Address bus pins when the external memory space is expanded.
A13-A15		P55-P57	
WR	Output	—	External memory write signal output pin
RD	Output	—	External memory read signal output pin
ALE	Output	—	This pin outputs the timing signal used to externally latch the address output when accessing the external memory.
AN0-AN3	Input	—	A/D converter analog input pin
AV _{REF}	Input	—	A/D converter reference voltage input pin
AV _{SS}	—	—	A/D converter GND pin

*: Parentheses indicate the pin name shared in the PROM programming mode.

(2/2)

Pin Name	Input/ Output	Shared Pin*	Function
X1	Input	–	The system clock crystal is connected across these pins. When using an external clock, the X1 pin inputs the external clock.
X2	–		
$\overline{\text{RFSH}}$	Output	–	This pin outputs the refresh pulse to the externally connected pseudo-static memory.
$\overline{\text{RESET}}$	Input	(PROG)	System reset pin
V _{DD}	–	–	Positive power supply pin
V _{SS}	–	–	GND
$\overline{\text{EA}}$	Input	(V _{PP})	This pin is usually connected to V _{DD} . When this pin is connected to V _{SS} , the ROM-less mode is set in which the external memory can be accessed. The level of this pin cannot be changed during operation.
IC	–	–	Internally connected. Leave this pin open.

*: Parentheses indicate the pin name shared in the PROM programming mode.

1.3 ALL OTHER PINS (ON PROM PROGRAMMING MODE)

Pin Name	Input/ Output	Shared Pin	Function
A0-A7	Input	P10-P17	Address input pins
A8-A12		P50-P54/ A8-A12	
D0-D7	Input/ output	P40-P47/ AD0-AD7	Data input/output pins
$\overline{\text{CE}}$	Input	P06	Chip-enable input pin/program pulse input pin
$\overline{\text{OE}}$	Input	P07	Output-enable input pin
PROG	–	$\overline{\text{RESET}}$	PROM programming mode set pin
V _{PP}	–	$\overline{\text{EA}}$	Program write/verify high voltage application pin
V _{DD}	–	–	Positive power supply pin
V _{SS}	–	–	GND

1.4 PIN INPUT/OUTPUT CIRCUITS

Table 1-1 and Fig. 1-1 describe each pin input/output circuit in a simplified manner.

Table 1-1 Input/Output Circuit Type for Each Pin

Pin*	Input/output circuit type	Pin*	Input/output circuit type
P00-P05	5	P34/PWM0	5
P06/($\overline{\text{CE}}$)		P35/PWM1	
P07/($\overline{\text{OE}}$)		P36/TO0/CLR0	6
P10-P17/(A0-A7)	5	P37/TO1/CLR1	
P20/NMI	2	P40-P47/AD0-AD7/(D0-D7)	5
P21/INTE0	1	P50-P54/A8-A12/(A8-A12)	5
P22/INTE1		P55-P57/A13-A15	
P23/INTE2		WR	3
P24/TxD	5	RD	
P25/RxD		ALE	
P26/SCK		$\overline{\text{EA}}$	1
P27/CTS		AN0-AN3	7
P30/CIO		RFSH	3
P31/CTRL0	1	RESET/(PROG)	2
P32/CI1			
P33/CTRL1			

*: Parentheses indicate pin used for PROM programming.

Fig. 1-1 Pin Input/Output Circuits

1.5 RECOMMENDED CONDITIONS FOR UNUSED PINS

Pin	Recommended connection
P00-P07 P10-P17	Input mode: Connect to V_{DD} through a pull-up resistor Output mode: Open
P20-P23	Connect to V_{SS}
P30-P33	Connect to either V_{SS} or V_{DD}
P24-P27 P34-P37 P40-P47 P50-P57	Input mode: Connect to V_{DD} through a pull-up resistor Output mode: Open
$\overline{WR}$ $\overline{RD}$ ALE $\overline{RFSH}$	Open
AN0-AN3	Connect to either V_{SS} or V_{DD}
AV _{REF} AV _{SS}	Connect to V_{SS}

2. COMPARISON OF FAMILY PRODUCTS

The μ PD78P312A is a version of the μ PD78312A in which the internal mask ROM is replaced with an one-time PROM or EPROM. The μ PD78P312A is an upgraded version of the μ PD78P312. Table 2-1 shows a comparison of the μ PD78P312A, μ PD78312A, and μ PD78310A. Table 2-2 shows a comparison of the μ PD78P312A and μ PD78P312. Except where noted, these products are identical with respect to function.

Refer to the documents provided for the μ PD78312A and μ PD78310A for details concerning the internal hardware such as CPU functions.

Table 2-1 Comparison of μ PD78P312A, μ PD78312A, and μ PD78310A

Item		μ PD78P312A	μ PD78312A	μ PD78310A
Program memory		• PROM • 8,192 x 8 bits	• Mask ROM • 8,192 x 8 bits	• Not internally provided
Pin function	PROM programming mode	Provided	None	
	Ports 4, 5	Provided	Provided	None (These ports always serve as the address bus, data bus)
	$\overline{EA}$	Provided	Provided (However, must be operated with this pin set to low)	
External memory access		External memory can be expanded in steps by 256 bytes, 4K bytes, 16K bytes, or 56K bytes, using the memory expansion mode register (MM).		Always accesses 64K bytes of the external memory (regardless of the setting in the memory expansion mode register (MM).
Package	Without window	• 64-pin plastic shrink DIP (750 mil) • 64-pin plastic QUIP • 64-pin plastic QFP (14 x 20 mm) • 68-pin plastic QFJ (□ 950 mil)		
	With window	• 64-pin ceramic shrink DIP with window (750 mil) • 64-pin ceramic QUIP with window	None	

Table 2-2 Difference Between μ PD78P312A and μ PD78P312

Item	μ PD78P312A	μ PD78P312
Mode 4 in count unit (4 x multiplication mode)	Provided	Not provided
Count start triggered by external pulse of interval timer	Provided	Not provided
16 bit data transfer instruction used between memory and a pair register • MOVW rp1, laddr 16 instruction • MOVW laddr 16, rp1 instruction	Provided	Not provided

3. PROM PROGRAMMING

The ROM contained in μ PD78P312A is an electrically erasable PROM with 8,192 x 8 bit configuration. The pins listed in the table below are used to program the PROM.

When used in the normal operation mode, $5\text{ V} \pm 10\%$ is applied to the V_{DD} and V_{PP} pins. A voltage higher than V_{DD} should not be applied to other pins.

The programming characteristics of the μ PD78P312A are identical to those of the μ PD27C256A.

Pin Name	Function
V_{PP}	High voltage input (write/verify mode), high level input (read mode)
PROG	High voltage input (write/verify mode, read mode)
A0-A7	Address input (lower 8 bits)
A8-A12	Address input (upper 8 bits)
D0-D7	Data input (write mode), data output (verify mode)
$\overline{CE}$	Program pulse input
$\overline{OE}$	Output enable input
V_{DD}	Power supply pin

- Note:**
1. Attach a light baffle film to μ PD78P312A with an erase window to protect the EPROM from being erased accidentally.
 2. The one-time PROM product, μ PD78P312A, cannot be erased by ultraviolet rays, because it is not provided with a window.

3.1 PROM PROGRAMMING MODE

When +6 V is applied to the V_{DD} pin and +12.5 V is applied to the PROG pin and V_{PP} pin, the μ PD78P312A enters the program write/verify mode. Operation in this mode is determined according to the setting of $\overline{CE}$ and $\overline{OE}$ pins as indicated in the table below. Additionally, when set to the read mode, the μ PD78P312A can read the contents of PROM.

Operation mode specification					Operation mode	
V _{PP}	V _{DD}	$\overline{\text{CE}}$	$\overline{\text{OE}}$	PROG		
+12.5 V	+6 V	L	H	+12.5 V	Write mode	
		H	L		Verify mode	
		H	H		Program inhibit mode	
V _{PP} =V _{DD} =+5 V		L/H	L		Read mode	Data is output from the D0-D7 pins
			H			D0-D7 are high impedance

Remarks: H indicates high level; L indicates low level.

Note: When +12.5 V is applied to V_{PP} and +6 V is applied to V_{DD} , both $\overline{CE}$ and $\overline{OE}$ must not be set to low level (L) simultaneously.

3.2 PROM WRITE PROCEDURE

Data can be written to the PROM using the following procedure. High speed data write operation is possible.

- (1) Process the pins not used in accordance with the description in Pin Configuration, and supply +6 V to the V_{DD} pin and +12.5 V to the V_{PP} pin.
- (2) Provide the initial address.
- (3) Provide write data.
- (4) Provide a 1 ms program pulse (active low) to the $\overline{CE}$ pin.
- (5) Verify mode. If the data has been written, proceed to (7), if not, repeat steps (3) to (5). If the data cannot be correctly written in 25 attempts, go to step (6).
- (6) Classify the PROM as defective and cease write operation.
- (7) Provide write data and supply (for additional writing) program pulses for 3 ms times the number of repeats performed between steps (3) to (5).
- (8) Increment the address.
- (9) Repeat steps (3) to (8) until the end address is reached.

Fig. 3-1 PROM Write/Verify Timing

3.3 PROM READ PROCEDURE

The contents of the PROM can be read out to the external data bus (D0-D7) using the following procedure.

- (1) Process the unused pins in accordance with the description in Pin Configuration.
- (2) Supply +5 V to the V_{DD} pin and V_{PP} pin, and +12.5 V to the PROG pin.
- (3) Input the address of the data to be read to the A0 to A12 pins.
- (4) Read mode.
- (5) Data is output to the D0 to D7 pins.

Fig. 3-2 shows the timing for this sequence from steps (2) to (5).

Fig. 3-2 PROM Read Timing

3.4 ERASING PROCEDURE (EPROM PRODUCT ONLY)

Data on the μPD78P312ADW/R EPROM can be erased by exposing the EPROM to light with a wavelength shorter than 400 nm. Therefore, if the EPROM is exposed to direct sunlight or the light of a fluorescent lamp for a long time, the data on the EPROM may be erased. To protect the data, mask the EPROM window with a light baffle film, which is attached as an accessory.

Usually, cast a 254 nm ultraviolet ray onto the window of the EPROM to erase the memory contents. To completely erase the EPROM contents, a minimum of 15 W·s/cm² (strength of the ultraviolet light x erase time) of exposure is necessary. This means that, when a 12,000 μW/cm² ultraviolet lamp is used, about 15 to 20 minutes are required to completely erase the EPROM contents. The time required to erase the EPROM contents, however, may be lengthened if the file of the ultraviolet lamp used is ending, or if the window of the EPROM is soiled. The distance between the ultraviolet lamp and the window should be 2.5 cm or shorter.

3.5 SCREENING OF ONE-TIME PROM PRODUCTS

★

One-time PROM products (μPD78P312ACW, 78P312AGF-3BE, 78P312AGQ-36, and 78P312AL) cannot be completely tested by NEC before shipment. It is recommended that screening be implemented under the following conditions to verify the PROM after the necessary data has been written:

Storage Temperature	Storage Time
125°C	24 hours

NEC offers changed services including writing, printing, screening, and verifying one-time PROMs by the device called a QTOP microcomputer. For details, consult NEC.

4. ELECTRICAL CHARACTERISTICS

Absolute Maximum Rating ($T_a = 25^\circ\text{C}$)

Item	Symbol	Conditions	Rating	Units
Power supply voltage	V_{DD}		-0.5 to +7.0	V
	AV_{REF}		-0.5 to $V_{DD}+0.3$	V
	AV_{SS}		-0.5 to +0.5	V
	V_{PP}		-0.5 to +13.5	V
Input voltage	V_{I1}	Other than $\overline{\text{RESET}}$	-0.5 to $V_{DD}+0.5$	V
	V_{I2}	$\overline{\text{RESET}}$	-0.5 to +13.5	V
Output voltage	V_O		-0.5 to $V_{DD}+0.5$	V
Low level output current	I_{OL}	Single pin	4.0	mA
		All output pins total	60	mA
High level output current	I_{OH}	Single pin	-2	mA
		All output pins total	-15	mA
Operating temperature	T_{opt}		-10 to +70	$^\circ\text{C}$
Storage temperature	T_{stg}		-65 to +150	$^\circ\text{C}$

Operating Condition

Item	T_a	V_{DD}
Oscillation frequency		
$4\text{ MHz} \leq f_{xx} \leq 12\text{ MHz}$	-10 to +70 $^\circ\text{C}$	+5.0 V $\pm 10\%$

Capacitance ($T_a = 25^\circ\text{C}$, $V_{DD} = V_{SS} = 0\text{ V}$)

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Units
Input capacitance	C_i	f = 1 MHz Pin not used for measurement is 0 V			10	pF
Output capacitance	C_o				20	pF
Input/Output capacitance	C_{io}				20	pF

Oscillator Characteristics ($T_a = -10$ to $+70^\circ\text{C}$, $V_{DD} = +5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0\text{ V}$, $4\text{ V} \leq AV_{REF} \leq V_{DD}$)

Oscillator	Recommended circuit	Item	MIN.	MAX.	Units
Ceramic oscillator or crystal resonator		Oscillation frequency (f_{xx})	4	12	MHz
External clock		X1 input frequency (f_x)	4	12	MHz
		X1 input rise, fall time (t_{xr} , t_{xf})	0	30	ns
		X1 input high/low level width (t_{wxH} , t_{wxL})	30	130	ns

- Notes**
- 1: Oscillator circuit must be located as close as possible to the X1 and X2 pins.
 - 2: To prevent noise from affecting operation, avoid locating other signal lines within portion enclosed in dotted line.

Recommended Oscillator Circuit Constants

Ceramic oscillator

Manufacturer	Product name	Frequency [MHz]	External capacitance [pF]

Data set up time (vs. $\overline{\text{WR}}$ ↓) ^{*3}	t _{sODWF}	Refresh mode	33		ns
Data hold time (vs. $\overline{\text{WR}}$ ↑)	t _{hWOD}		20		ns
$\overline{\text{WR}}$ ↑ → ALE ↑ delay time	t _{dWL}		116		ns
$\overline{\text{WR}}$ low level width	t _{wWL}		200		ns

***1:** The internal system clock (f_{CLK}) is the oscillation clock (f_{xx}) divided by 2 or 8, depending on the STBC register specification. The value in this table is indicated as f_{xx} = 12 MHz and f_{CLK} = f_{xx}/2.

***2:** During pulse refresh operation, the falling edge of the $\overline{\text{WR}}$ signal is delayed by a half clock. Therefore, the value in the lower row is used as the value of t_{dLW}.

***3:** When accessing a pseudo-static RAM (μ PD428128 etc.) from which the data is clocked in at the falling edge of the $\overline{\text{WR}}$ signal, the data set up time is not t_{sODWR}, but t_{sODWF}.

Remarks: This table shows the characteristics when the number of weight cycles is 0.

Serial Operation (Ta = -10°C to +70°C, VDD = +5.0 V ±10%, VSS = 0 V)

Item	Symbol	Conditions	MIN.	MAX.	Units
Serial clock cycle time	tcvsk	Output SCK *1	1.33		μs
		CTS *2	1.33		μs
		Input CTS *3	1		μs

6. RECOMMENDED SOLDERING CONDITIONS

It is recommended that μPD78P312A be soldered under the following conditions.

For details on the recommended soldering conditions, refer to Information Document "Semiconductor Devices Mounting Manual" (IEI-616).

The soldering methods and conditions are not listed here, consult NEC.

Table 6-1 Soldering Conditions of Surface Mount Type

μPD78P312AGF-3BE: 64-pin plastic QFP (14 x 20 mm)

Soldering Method	Soldering Conditions	Recommended Conditions Reference Code
Infrared Reflow	Package peak temperature: 230°C, time: 30 seconds max. (210°C min.), number of times: 1, maximum number of days: 2 days* (beyond this period, 16 hours of pre-baking is required at 125°C)	IR30-162-1
VPS	Package peak temperature: 215°C, time: 40 seconds max. (200°C min.), numbr of times: 1, maximum number of days: 2 days* (beyond this period, 16 hours of pre-baking is required at 125°C)	VP15-162-1
Pin Partial Heating	Pin temperature: 300°C max., time: 3 seconds max. (per side)	—

*: Number of days after unpacking the dry pack. Storage conditions are 25°C and 65%RH max..

Caution: Do not use two or more soldering methods in combination (except the pin partial heating method).

Table 6-2 Soldering Conditions of Surface Mount Type

μPD78P312AL: 64-pin plastic QFJ (□ 950 mil)

Soldering Method	Soldering Conditions	Recommended Conditions Reference Code
VPS	Package peak temperature: 215°C, time: 40 seconds max. (200°C), number of times: 1	VP15-00-1
Pin Partial Heating	Pin temperature: 300°C max., time: 3 seconds max. (per side)	—

Caution: Do not use two or more soldering methods in combination (except the pin partial heating method).

Table 6-3 Soldering Conditions of Through-Hole Type

★

μPD78P312ACW: 64-pin plastic shrink DIP (750 mil)
 μPD78P312AGQ-36: 64-pin plastic QUIP
 μPD78P312ADW: 64-pin shrink DIP with Ceramic Window (750 mil)
 μPD78P312AR: 64-pin QUIP with Ceramic Window

Soldering Method	Soldering Conditions
Wave Soldering (Only for lead part)	Solder bath temperature: 260°C max., time: 10 seconds max.
Pin Partial Heating	Pin temperature: 260°C max., time: 10 seconds max.

Caution: The wave soldering must be performed at the lead part only. Note that the solder must not be directly contacted to the package body.

Notice

A model that can be soldered under the more stringent conditions (infrared reflow peak temperature: 235°C, number of times: 2, and an extended number of days) is also available.
 For details, consult NEC.

★

APPENDIX A. DIMENSIONS OF CONVERSION SOCKET AND RECOMMENDED MOUNTING PATTERN

Connect the emulation probe for μPD78P312AGF-3BE (EP-78310GF) to the target system in combination with a conversion socket (EV-9200G-64).

The dimensions of the conversion socket and recommended mounting pattern are shown below.

EV-9200G-64-G0

ITEM	MILLIMETERS	INCHES

Mounting Pattern (Reference) (Unit: mm)**

Caution Dimensions of mount pad for EV-9200 and that for target device (QFP) may be different in some parts. For the recommended mount pad dimensions for QFP, refer to "SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL" (IEI-1207).

APPENDIX B. DEVELOPMENT TOOLS

The following development tools are optionally available :

Hardware

IE-78310A-R	This is an in-circuit emulator that can be used for developing and debugging an application system. It is connected to the host system when debugging is performed. Since the in-circuit emulator can transfer object files with the host machine, it enables efficient debugging to be performed.
EP-78310CW EP-78310GF EP-78310GQ EP-78310L	These emulation probes connect IE-78310A-R to the user system.
PG-1500	This is a PROM programmer that can program single-chip microcomputers with PROM in either stand-alone mode or under control of a host machine, when connected to the supplied accessory board and a programmer adapter. It can program typical PROMs from 256 K-bit to 4 M-bit models.
PA-78P312CW PA-78P312GF PA-78P312GQ PA-78P312L	These PROM programmer adapters write programs to the μ PD78P312A with a general-purpose PROM programmer such as PG-1500. PA-78P312CW ----- for μ PD78P312ACW, 78P312ADW PA-78P312GF ----- for μ PD78P312AGF-3BE PA-78P312GQ ----- for μ PD78P312AGQ-36, 78P312AR PA-78P312L ----- for μ PD78P312AL

Other PROM Programmer

The following PROM Programmer can also be used to program the μ PD78P312A :

Manufacturer	Product Name
Data I/O Japan	UNISITE 2900
Ando Electric	AF-9704 AF-9705

Software

IE-78310A-R Control Program (IE Controller)	Host Machine	OS	Supply Media	Ordering Code (product name)
	PC-9800 series	MS-DOS™	8" 2D *	μS5A1IE78310-P01
			3.5" 2HD	μS5A13IE78310
			5" 2HD	μS5A10IE78310-P01
	IBM PC/AT™	PC DOS™	5" 2HC	μS7B10IE78310
78K/III Series Relocatable Assembler	Host Machine	OS	Supply Media	Ordering Code (product name)
	PC-9800 series	MS-DOS	8" 2D *	μS5A1RA78K3
			3.5" 2HD	μS5A13RA78K3
			5" 2HD	μS5A10RA78K3
	IBM PC/AT	PC DOS	5" 2HC	μS7B10RA78K3
PG-1500 Controller	Host Machine	OS	Supply Media	Ordering Code (product name)
	PC-9800 series	MS-DOS	3.5" 2HD	μS5A13PG1500
			5" 2HD	μS5A10PG1500
	IBM PC/AT	PC DOS	5" 2HC	μS7B10PG1500

* : The 8" 2D model has been superseded by the 5" 2HD or 3.5" 2HD model. If you already have the 8" 2D model, the 5" 2HD model will be supplied for future upgrading.

Remarks : The operation of each software package is guaranteed only with the above host machine and OS.

DEVELOPMENT TOOL CONFIGURATION*

— : When used with the host machine.

- - - : When using the IE as a stand-alone by connecting it to the console.

*: PA-78P312CW is used for the μPD78P312ACW/DW.
 PA-78P312GF is used for the μPD78P312AGF-3BE.
 PA-78P312GQ is used for the μPD78P312AGQ-36/R.
 PA-78P312L is used for the μPD78P312AL.
