CMOS Quad Bilateral Switch

For Transmission or Multiplexing of Analog or Digital Signals

RCA CD4066A is a quad bilateral switch intended for the transmission or multiplexing of analog or digital signals. It is pin-for-pin compatible with RCA-CD4016, but exhibits a much lower ON resistance. In addition, the ON resistance is relatively constant over the full input-signal range.

The CD4066A consists of four independent bilateral switches. A single control signal is required per switch. Both the p and the n device in a given switch are biased ON or OFF simultaneously by the control signal. As shown in Fig. 1, the well of the n-channel device on each switch is either tied to the input when the switch is ON or to V_{SS} when the switch is OFF. This configuration eliminates the variation of the switch-transistor threshold voltage with input signal, and thus keeps the ON resistance low over the full operating-signal range.

The advantages over single-channel switches include peak input-signal voltage swings equal to the full supply voltage, and more constant ON impedance over the input-signal range. For sample-and-hold applications, however, the CD4016 is recommended.

These types are supplied in 14-lead hermetic dual-in-line ceramic packages (D and F suffixes), 14-lead dual-in-line plastic package (E suffix), 14-lead ceramic flat package (K suffix), and in chip form (H suffix).

SPECIAL CONSIDERATIONS - CD4066A

- 1. In applications where separate power sources are used to drive V_{DD} and the signal inputs, the V_{DD} current capability should exceed V_{DD}/R_L (R_L = effective external load of the 4 CD4066A bilateral switches). This provision avoids any permanent current flow or clamp action on the V_{DD} supply when power is applied or removed from CD4066A.
- 2. In certain applications, the external load-resistor current may include both V_{DD} and signal-line components. To avoid drawing V_{DD} current when switch current flows into terminals 1, 4, 8, or 11, the voltage drop across the bidirectional switch must not exceed 0.8 volt (calculated from R_{ON} values shown).
- No V_{DD} current will flow through R_L if the switch current flows into terminals 2, 3, 9, or 10.
- 3. Minimum bilateral switch output load resistance is 100 Ω.

- Features:
- 15-V digital or ± 7.5-V peak-to-peak switching
 - 80Ω typical ON resistance for 15-V operation
 - Switch ON resistance matched to within 5 Ω over 15-V signal-input range
 - ON resistance flat over full peak-to-peak signal range
 - High ON/OFF output-voltage ratio: 65 dB typ. @ f_{is} = 10 kHz, R_L = 10 kΩ
 - High degree of linearity: < 0.5% distortion typ. @ f_{is} = 1 kHz, V_{is} = 5 V_{p-p}, V_{DD}-V_{SS} ≥ 10 V, R_L = 10 kΩ
 - Extremely low OFF switch leakage resulting in very low offset current and high effective OFF resistance: 10 pA typ. @ V_{DD}-V_{SS} = 10 V, T_A = 25°C
 - Extremely high control input impedance (control circuit isolated from signal circuit): 10¹² Ω typ.
 - Low crosstalk between switches: -50 dB typ. @ f_{is} = 0.9 MHz, R_L = 1 kΩ
 - Matched control-input to signal-output capacitance: Reduces output signal transients
 - Frequency response, switch ON = 40 MHz (typ.)
 - Quiescent current specified to 15-V
 - Maximum control input leakage current of 1-μA at 15-V (Full package-temperature range)

NOTES:

Refer to Rules for Dimensioning (JEDEC Publication No. 95) for Axial Lead Product Outlines.

- 1. When this device is supplied solder-dipped, the maximum lead thickness (narrow portion) will not exceed 0.013".
- 2. Leads within 0.005" (0.12 mm) radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
- 3. e_A applies in zone L₂ when unit installed.
- 4. a applies to spread leads prior to installation.
- 5. N is the maximum quantity of lead positions.
- 6. N₁ is the quantity of allowable missing leads.

NOTES:

Refer to Rules for Dimensioning (JEDEC Publication No. 95) for Axial Lead Product Outlines.

- When this device is supplied solder dipped, the maximum lead thickness (narrow portion) will not exceed 0.013" (0.33 mm).
- Leads within 0.005" (0.12 mm) radius of True Position (TP) at gauge plane with maximum material condition and unit installed.
- e_1 applies in zone L₂ when unit installed.
- a applies to spread leads prior to installation.
- N is the maximum quantity of lead positions.
- N_1 is the quantity of allowable missing leads.
