

C690
C691
C692
C693

Microcircuits

Single-Chip Microprocessor Supervisory Circuits

Features

- Precision voltage monitoring (C690/C691, 4.65 V; C692/C693, 4.40 V)
- Reduced component count
- Power OK/reset time delay
- Watchdog timer with 100 ms, 1.6 sec or adjustable settings
- Standby current of 1 μ A
- Battery backup power switching function
- Onboard gating of chip enable signals
- Voltage monitor for power failure or low battery warning

General Description

CMD's C690 microprocessor supervisory circuits are designed to reduce the component count and complexity necessary for power supply monitoring and battery control functions in microprocessor systems. When compared to separate ICs or other discrete components, the C690 family offers substantially improved system reliability and accuracy. Typical applications include computers, con-

trollers, automotives, intelligent instruments and critical microprocessor power monitoring.

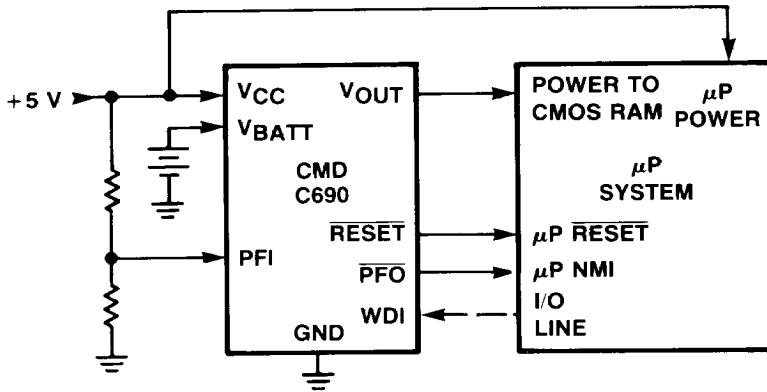

C690 and C692. Both are supplied in 8-pin packages and provide the following functions.

- Microprocessor reset during power-up, power-down and brown-out conditions
- Backup battery switchover for CMOS, RAM, CMOS microprocessor or other low power logic
- 1.25 V threshold detector for power fail warning, low battery detection or to monitor non +5 V power supplies
- Reset pulse in the event the optional watchdog timer has not been toggled within a specified time.

C691 and C693. Both come in 16-pin packages and perform all C690 and C692 functions plus the following.

- CMOS RAM or EEPROM write protection
- Adjustable reset and watchdog timeout periods
- Separate outputs for indicating a watchdog timeout, backup battery switchover and low V_{CC}

Block Diagram

C690 TYPICAL APPLICATION

ADVANCE INFORMATION

Absolute Maximum Ratings

Terminal Voltage (with respect to GND)		Power Dissipation	
V_{CC}	-0.3 V to 6.0 V	8 Pin Plastic DIP	400 mW
V_{BATT}	-0.3 V to 6.0 V	(Derate 5 mW/ $^{\circ}\text{C}$ above + 70 $^{\circ}\text{C}$)	
All Other Inputs (Note 1)	-0.3 V to ($V_{OUT} - 0.5$ V)	8 Pin CERDIP	500 mW
Input Current		(Derate 8 mW/ $^{\circ}\text{C}$ above + 85 $^{\circ}\text{C}$)	
V_{CC}	200 mA	16 Pin Plastic DIP	600 mW
V_{BATT}	50 mA	(Derate 7 mW/ $^{\circ}\text{C}$ above + 70 $^{\circ}\text{C}$)	
GND	20 mA	16 Pin Small Outline	
Output Current	short circuit protected	(Derate 7 mW/ $^{\circ}\text{C}$ above + 70 $^{\circ}\text{C}$)	600 mW
V_{OUT}	20 mA	16 Pin CERDIP	
All Other Outputs		(Derate 10 mW/ $^{\circ}\text{C}$ above + 85 $^{\circ}\text{C}$)	600 mW
Rate-of-Rise, V_{BATT} , V_{CC}	100 V/ μs	Storage Temperature Range	-65 $^{\circ}\text{C}$ to +160 $^{\circ}\text{C}$
Operating Temperature Range		Lead Temperature (Soldering, 10 seconds)	300 $^{\circ}\text{C}$
C suffix	0 $^{\circ}\text{C}$ to + 70 $^{\circ}\text{C}$		
E suffix	-40 $^{\circ}\text{C}$ to + 85 $^{\circ}\text{C}$		
M Suffix	-55 $^{\circ}\text{C}$ to + 125 $^{\circ}\text{C}$		

Electrical Characteristics: (V_{CC} = full operating range, V_{BATT} = 2.8 V, T_A = 25 $^{\circ}\text{C}$, unless otherwise noted.)

Parameter	Conditions	Min	Typ	Max	Units
Battery Backup Switching					
Operating Voltage Range C690, C691 V_{CC}		4.75	—	5.5	V
C690, C691 V_{BATT}		2.0	—	4.25	
C692, C693 V_{CC}		4.5	—	5.5	
C692, C693 V_{BATT}		2.0	—	4.0	
V_{OUT} Output Voltage	$I_{OUT} = 1$ mA $I_{OUT} = 50$ mA	—	$V_{CC} - 0.1$ $V_{CC} - 0.25$	—	V
V_{OUT} in Battery Backup Mode	$I_{OUT} = 100$ μA , $V_{CC} < V_{BATT} - 0.2$ V	— —	$V_{BATT} - 0.1$, $V_{BATT} - 0.02$	— —	V
Supply Current (excludes I_{OUT})		—	1.5	—	mA
Supply Current in Battery Backup Mode	$V_{CC} = 0$ V, $V_{BATT} = 2.8$ V	—	0.6	1.0	μA
Battery Standby Charging Current	5.5 V > $V_{CC} > V_{BATT} + 0.2$ V	—	—	5.0	μA
Battery Switchover Threshold $V_{CC} - V_{BATT}$	Power Up Power Down	— —	70 50	—	mV
Battery Switchover Hysteresis		—	20	—	mV
BATT ON Output Voltage	$I_{SINK} = 3.2$ mA	—	—	0.4	V
BATT ON Output Short Circuit Current	$BATT\ ON = V_{OUT}$ $BATT\ ON = 0$ V	— 0.5	7.0 1.0	— 25	μA
Reset and Watchdog Timer					
Reset Voltage Threshold	C690, C691 C692, C693	4.5 4.25	4.65 4.4	4.75 4.5	V

Note 1. The input voltage limits on PFI and WDI may be exceeded provided the input current is limited to less than 10 mA.
