

Servo signal processor for CD use BU9314KS

The BU9314KS is a servo signal processor for CD players that incorporates a double-speed, no-adjustment PLL, program servo, and signal processing block, and D/A converter on one chip. It operates off a low power supply voltage, and has low power consumption.

●Applications

Portable CD players, radio cassette players, and mini-component systems.

●Features

- 1) PLL on chip. Bit clock extraction possible with just a few external components. EFM data modulation is possible.
- 2) Frame synchronizing signal detection and protection.
- 3) Servo filters for focus, tracking, and sled are on chip. Characteristics can be controlled using commands from the controller.
- 4) Sub-code serial output pin provided.
- 5) Output pins for both P-code and Q-code.
- 6) CLV sequencer automatically determines the CLV mode.
- 7) Track jump sequencer on chip. Possible to jump any number of tracks.
- 8) De-interleave function, and 2-level error detection, correction and flag processing for C1 and C2.
- 9) The signal to the D/A converter is output by the MSB first 2'SCOMP serial out, and offset circuit ON and OFF can be controlled for CD-ROM compatibility.
- 10) 16k bits of on-chip SRAM absorb ± 4 frames of jitter.
- 11) Double-speed playback is possible.
- 12) Built-in 8Fs digital filter and 16-bit D/A converter.
- 13) Built-in digital de-emphasis function.

●Absolute maximum ratings ($T_a = 25^\circ\text{C}$)

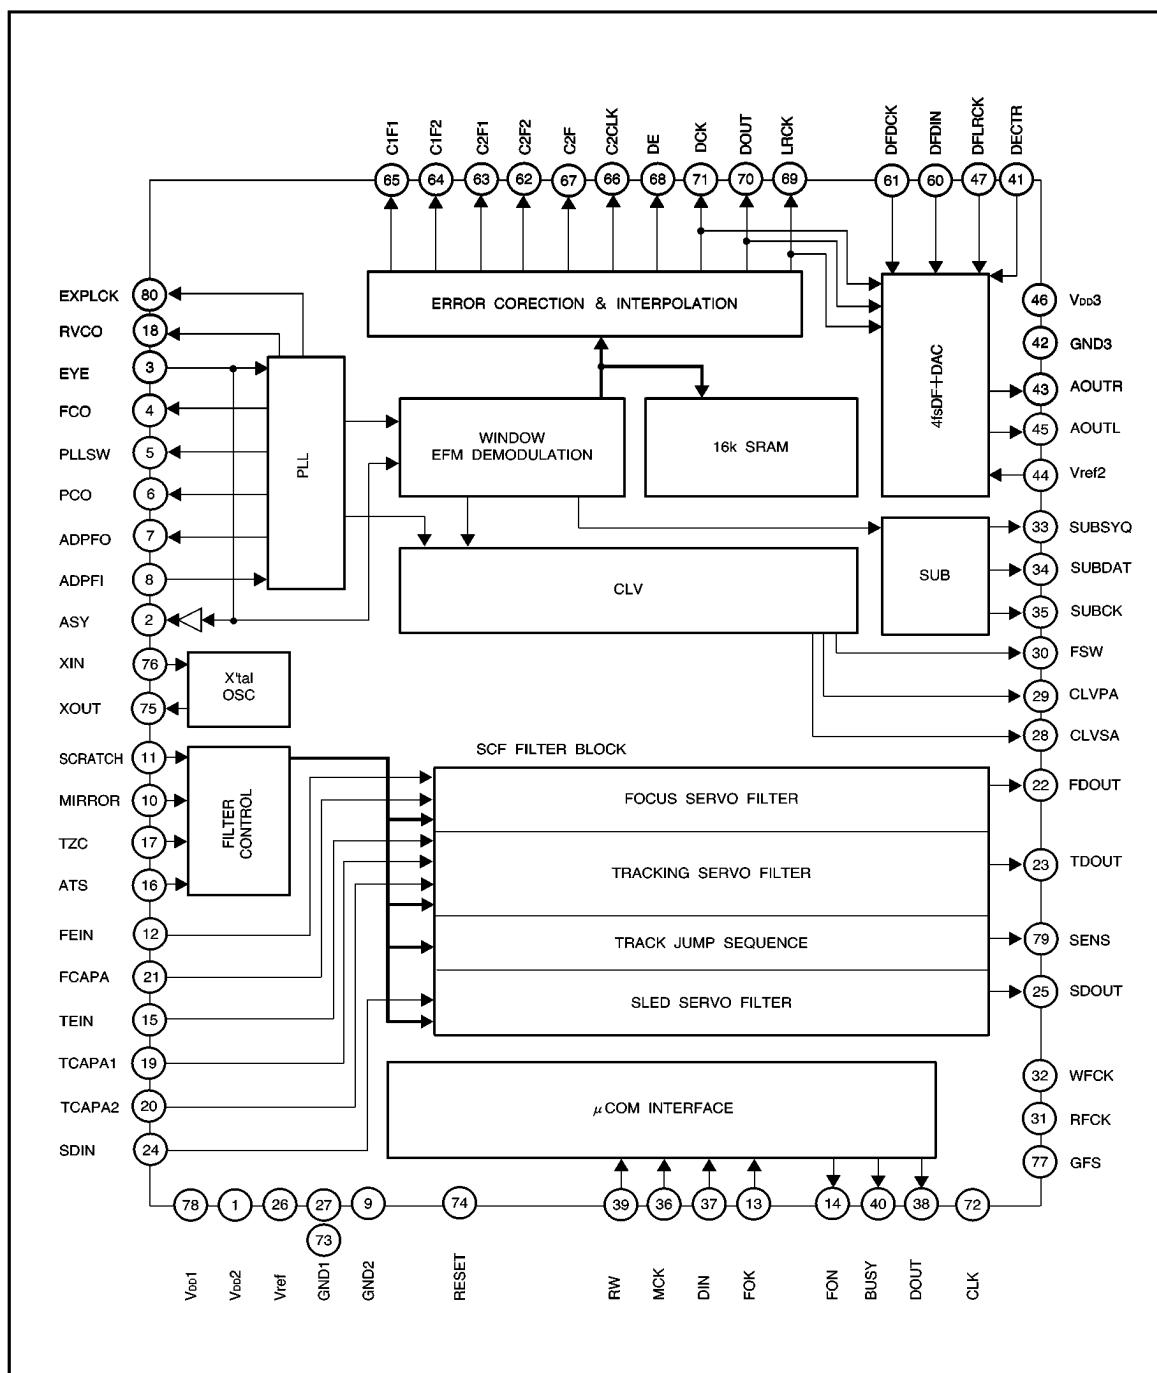

Parameter	Symbol	Limits	Unit
Power supply voltage	V _{cc}	7	V
Power dissipation	P _d	400*	mW
Operating temperature	T _{opr}	-25~+70	°C
Storage temperature	T _{stg}	-55~+125	°C

* Reduced by 4 mW for each increase in T_a of 1°C over 25°C.

●Recommended operating conditions ($T_a = 25^\circ\text{C}$)
